All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except the MDL and Form 1's containing TIC's were not included in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met except the %Rec of Bromofluorobenzene was outside QC limits, high, in sample 690-TP-F-0. All associated detected target analytes would be considered biased high.

METHOD BLANK

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met except Methylene chloride was detected in 690-SS-5(0-2")-O above the MDL, but below the reporting limit. Methylene chloride was not detected in the duplicate, 690-SS-5(0-2")-D. This could be due to the heterogeneous nature of the soil sample.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of Acetone was outside QC limits, high in LCS-48291.

MS/MSD
All criteria were met except the %Rec of Vinyl Acetate and tert-Butylbenzene were outside QC limits, low, in 690-SS-9(0-2")-OMS. The %Rec of Tetrachloroethylether was outside QC limits, high, in 690-SS-9(0-2")-OMS. The %Rec for these target anaylytes were within QC limits for 690-SS-9(0-2")-OMSD. The %RPD of Vinyl Acetate and tert-Butylbenzene were outside QC limits for 690-SS-9(0-2")-OMS/SD.

All criteria were met except Butylbenzylphthalate and Dibenzo(a,h)anthracene were detected in sample 690-SS-3(2"-2')-O but not in 690-SS-3(2"-2')-D. Fluorene was detected in 690-SS-5(0-2")-O but not in 690-SS-5(0-2")-D. This could be due to the heterogeneous nature of the soil samples.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of Hexachlorocyclopentadiene was outside QC limits; low, in LCS - 48295 and LCSD-48295. Hexachlorocyclopentadiene was not detected in the associated samples, so it should be qualified as undetected estimated.
The %Rec of 2,4-Dimethylphenol was outside QC limits; low in LCSD-48295 but within limits in LCS-48295. The %RPD for 2,4-Dimethylphenol was outside QC limits.
The %Rec of Bis(2-chloroethyl)ether, Naphthalene, Acenaphthylene, Anthracene and Di-n-Butylphthalate were outside QC limits, high, in LCS-48319. They would be considered biased high.
The %Rec of Di-n-Butylphthalate was outside QC limits, high, in LCS-48320. It would be considered biased high.

PESTICIDES

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision

- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Surrogate Spike Recoveries and Compound Quantitation.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met except the %Rec of Decachlorobiphenyl was outside QC limits, low, off column 1 in samples 690-SS-2(0-2")-O, 690-SS-4(2"-2')-O, 690-SS-5(0-2")-O, 690-SS-8(2"-2')-O, 690-SS-10(2"-2')-O, 690-SS-10(0-2")-O, 690-SS-5(0-2")-D, 690-TP-D-O and 690-TP-F-O. This did not affect any of the samples, except 690-SS-8(2"-2')-0, because there were either no detects off both columns or column 1 was not used as the primary column. In sample 690-SS-8(2"-2')-0, column 1 was used as the primary column. Results for this sample should either be considered estimated or results from column 2 should be used.

METHOD BLANK
All the criteria were met for the method blank.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met except no %RPD's were recorded between LCS-48332 and LCSD-48332. The %Rec of several target analytes was recorded incorrectly on Form III for LCS-48324. An updated page is attached.

The %D for b-BHC was outside QC limits in LCS-48324. This could be due to coelution with the gamma-BHC peak. The column with the larger concentration should be used since neither column appears to have less coelution.

MS/MSD

All criteria were met except the %Rec of 4,4'-DDE, alpha-Chlordane and gamma-Chlordane were outside QC limits, low in 690-SS-8(0-2")-OMS. They were within limits in 690-SS-8(0-2")-OMSD. The %Rec of Dieldrin was outside QC limits, high in 690-SS-9(0-2")-OMS off column 2 only.
The %D of Endosulfan II was outside QC limits in sample 690-SS-8(0-2")-OMSD. This could be due to coelution.

COMPOUND QUANTITATION

All criteria were met except the %D of several target analytes were outside QC limits. This could be due to coelution. The results from column 1 were used for Endrin aldehyde and Endosulfan sulfate in sample 690-SS-4(2"-2')-O due to less coelution.
The column with the higher concentration should be used for 4,4'-DDT, since the coelution appeared to be the same between the two columns in sample 690-SS-4(2"-2')-O.
The column with the higher concentration should be used for Endosulfan II, since the coelution appeared to be the same between the two columns in sample 690-SS-8(2"-2')-O.
The column with the higher concentration should be used for Endrin aldehyde and 4,4'-DDD, since the coelution appeared to be the same between the two columns in sample 690-TP-F-O.

INITIAL CALIBRATION

All criteria were met.

CONTINUING CALIBRATION

All criteria were met except the %D of Dieldrin, Endosulfan II, Endrin ketone and 4,4'-DDD were outside QC limits off the confirmation column in continuing calibration INDC3HM.

POLYCHLORINATED BIPHENYLS

The following items/criteria were reviewed for this analytical suite:

- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Surrogate Spike Recoveries and Compound Quantitation.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met except the %Rec of DCBP in sample 690-SS-8(2"-2')-0 was outside QC limits, low off column 1. Aroclor 1260 should be qualified as estimated since column 1 was used as the primary column. All other target analytes would have been considered undetected estimated; since they were not detected on the confirmation column, which had acceptable surrogate recoveries, so it can be concluded that the other target analytes were not present above the MDL.

METHOD BLANK
All the criteria were met for the method blank.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met. The %D between the two columns was outside QC limits for Aroclor 1260 in LCS-48331 and LCSD-48331.

MS/MSD
All criteria were met except the %Rec of Aroclor 1260 in 690-SS-8(0-2")-0MS/MSD was outside QC limits, high off column 2. Aroclor 1260 would have been considered biased high but was not detected in the associated sample.
The %D between the two columns was outside QC limits for Aroclor 1260 in 690-SS-8-(2-2")-0MS/MSD.

COMPOUND QUANTITATION
All criteria were met the %D between the two columns were outside QC limits for Aroclor 1260 in samples 690-SS-4(2"-2')-0 and 690-SS-8(2"-2')-0 and Aroclor 1254 in sample 690-TP-F-0. The column

with the higher concentration should be used for these target analytes, since the coelution appeared to be the same between the two columns.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D was outside QC limits for several peaks off the confirmation column in continuing calibration AR12543JA.

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, PC, #208492, Centek Laboratories, LLC ID C1002005 and C1002006, submitted to Vali-Data of WNY, LLC on April 17, 2010. The laboratory performed the analysis using Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, and January 1999.

ORGANICS

The following items/criteria were reviewed for this report:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain-of-Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Tuning
- Canister Certification Blanks

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified as estimated in Internal Standard, Surrogate Spike Recoveries, MS/SD and Canister Certification Blanks, below. Updated pages are included per Data Completeness, Chain of Custody and Traffic Reports, Narrative and Data Reporting Forms and Canister Certification Blanks, below.

DATA COMPLETENESS

All criteria were met except no sample was collected for sample ID# Roof.2010.01.27. An updated page with the final vacuum reading is attached.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except on several forms, tag numbers were recorded incorrectly. Updated pages are attached.

The dilution of sample 690-SV-3 AMB-0 was recorded incorrectly in the QA-QC Check Report. An updated page is attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met except no regulators were recorded for the samples in SDG# C1002006.

No date/time was recorded upon reception. An updated page is attached.

HOLDING TIMES

All holding times for the samples were met.

INTERNAL STANDARD (IS)

All criteria were met except the response of 1,4-Difluorobenzene was outside QC limits, high, in 690-SV-5-0. The response of Chlorobenzene-d5 was outside QC limits, high, in samples; 690-SV-1-0 (df= 1, 10), 690-SV-8-0 (df= 1, 10, 20), 690-SV-7-AMB-0 (df= 1, 10), 690-SV-5-0 (df=1, 10, 40, 160), 690-SV-7-0 (df=1, 10), 690-SV-6-0 (df=1, 10, 40), 690-SV-8-AMB-0 (df=1), 690-SV-4-0 (df=1), 690-SV-3-0 (df=1) and 690-SV-2-0 (df=1, 10). All detected target analytes associated with these internal standards should be qualified as estimated.

SURROGATE SPIKE RECOVERIES

All criteria were met except the %Rec fell outside QC limits, high, in samples; 690-SV-8-AMB-0 (df= 1, 10), 690-SV-7-AMB-0 (df= 1, 10, 40), 690-SV-5-AMB-0 (df=1), 690-SV-6-AMB-0 (df=1), 690-SV-2-0 (df=1), 690-SV-5-0 (df=1), 690-SV-8-0 (df=1) and 690-SV-1-0 (df=1). Associated target analytes would be biased high.

The %Rec fell outside QC limits, low, in samples; 690-SV-5-0 (df=40, 160) and 690-SV-6-0 (df= 40, 80). Associated target analytes would be considered biased low and should be qualified as estimated.

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. If the surrogate percent recovery is less than 10%, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "R", rejected. All VOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria with the following exceptions. LCSD-50270 had %Rs for 1,2-Dichloropropane, 1,1,2-Trichloroethane, Styrene, Bromoform, and 1,2-Dichlorobenzene above the QC limit, affecting samples 690-SB-A1(8.0-9.0')-O, 690-SB-A2(4.0-8.0')-O, 690-SB-A4(A)(4.0-7.0')-O, 690-SBA(4.0-5.9')-O, 690-SB-79(0-3.5')-O, 690-SB-15(4.0-5.0')-O, and 690-SB-16(0-3.0')-O. Associated target analyte positive results are qualified "J", estimated and nondetected analyte results should not be qualified.

LCS-50364 had a %R for 1,1-Dichloroethene below the QC limit, affecting samples 690-SB-A6(0-3.2')-O, 690-SB-A7(0-3.5')-O, 690-SB-77(0-4.0')-O, 690-SB-80(0-2.5')-O, 690-SB-14(4.0-6.5')-O, 690-SB-17(0-4.0')-O, 690-SB-19(8.0-10.8')-O, 690-SB-20(4.0-6.2')-O, 690-SB-21(0-4.0')-O, 690-SB-A(4.0-5.9')-D, 690-SB-A2(4.0-8.0')-D, and 690-SB-18(4.0-4.6')-O. Associated target analyte positive results are qualified "J", estimated and nondetected analyte results are qualified "UJ", estimated.

LCSD-50413 had a %R for Styrene above the QC limit, affecting sample 690-SB-76(7.7-8.0')-O. Associated target analyte positive results are qualified "J", estimated and nondetected analyte results should not be qualified.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance.

Organic analyses samples that contained concentrations of target analytes at a reportable level in the associated method blanks were flagged by the laboratory with a "B". If the target analyte concentration was greater than 10X the amount in any blank for the common laboratory contaminants or 5X the amount for other target compounds, the "B" qualifier was not carried forward; if less than the 10X or 5X rule, the "B" qualifier was replaced with a "U". The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL was carried forward. Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Dibromofluoromethane	S01	85-115
1,2-Dichloroethane-d4	S02	70-120
Toluene-d8	S03	85-120

Action #1: Positive results are qualified "J", estimated and nondetected analytes should not be qualified.
Action #2: Positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL). Based on a spot check of the data qualifiers used, these flags appeared to be applied to the

reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Thorium

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in the associated blank sample.

Target compounds were not identified in associated blank samples at a concentration above the MDL for metals analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Affected Sample(s)	Flag sample results with a "U" if ≤ this value
BLK1	Thorium-232	6.7E-02	All Samples	3.4E-01
	Thorium-230	1.4E-01		7.0E-01

Note: Preparation Blank associated samples include all samples analyzed within the sample analytical batch.

Laboratory Control Sample Analysis

The laboratory control sample (LCS) %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

MS/MSD Analysis

The MS %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

Laboratory Duplicate Analysis

The laboratory duplicate percent differences (%Ds) fell within the method required control limits without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)

Genesee Valley Real Estate
Labella Project #209280

Mitkem Laboratories, Warwick, RI
Sample Delivery Group #J1302
August 5, 2010

Prepared by:

Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).
- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540/R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	**Target Analyte(s)**	**Conc.**	**Affected Sample(s)**	**Flag sample results with a "U" if ≤ this value**

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria without exception.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL). Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds (SVOCs)

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, with the following exceptions:

Sample ID	Matrix	Holding Time Limit (days)[1]	Actual Holding Time (days)	Action
690-SG-5-O	AQ	7	9	Action #1
690-SG-6-O	AQ	7	8	Action #1
690-FIELD BLANK-O	AQ	7	8	Action #1
690-TRIP BLANK-O	AQ	7	8	Action #1

(1) The cooler temperature was above the recommended temperature of 6° C, and therefore the samples were improperly preserved.

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit for all VOCs in the affected samples.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Instrument	Date/ Time	Target Analyte(s)	%D	RRF	Affected Sample(s)	Corrective Action
V1	6/29/10 07:35	Vinyl Chloride	35.5	0.48	690-SG-5 (8.0-12.0')-O 690-MW-6 (8.3-10.3')-D 690-SG-5 (8.0-12.0')-D	Action #1
V2	7/1/10 08:02	Acetone 2-Chloroethyl vinyl ether	64.0 -26.6	0.04 0.10	690-SG-5-O	Action #1 Action #1

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Dibromofluoromethane	S01	65-132
1,2-Dichloroethane-d4	S02	65-128
Toluene-d8	S03	85-115
Bromofluorobenzene	S04	77-111

Project Sample ID	S01	S02	S03	S04	Positive Results	Non Detect (ND)
	%R	%R	%R	%R		
690-SG-5 (8.0-12.0')-D	98	98	122	107	J	Not Qualified

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. If the surrogate percent recovery is less than 10%, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "R", rejected. All VOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria, with the following exceptions:

LCS ID	Compound	QC Criteria	LCS %R	Affected Samples	Action
LCS-52730	Acetone	40-140	161	690-SG-5-O	Action #1

Action #1: Positive results are qualified "J", estimated and nondetected analytes should not be qualified.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, with the following exception:

Sample ID	Matrix	Holding Time Limit sampling to extraction (days)[1]	Time from Sampling to Extraction (days)	Action
690-SG-5-O	AQ	7	14	Action #1

(1) The cooler temperature was above the recommended temperature of 6° C, and therefore the samples were improperly preserved.

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated for all SVOCs in the affected samples.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions:

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, PC, #208492, Centek Laboratories, LLC ID C1009023, submitted to Vali-Data of WNY, LLC on November 3, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analysis using Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

ORGANICS

The following items/criteria were reviewed for this report:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain-of-Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Tuning
- Canister Certification Blanks

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified as estimated in Internal Standards, below.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times for the samples were met.

INTERNAL STANDARD (IS)

The IS did meet criteria for all samples except the area of 1,4-Difluorobenzene was outside QC limits, high in sample; SG-6 with dilution factors 1 and 10. The area of Chlorobenzene-d_5 was outside QC limits, high in sample; SG-6 with a dilution factor of 1. All associated positive results should be qualified as estimated.

SURROGATE SPIKE RECOVERIES

All criteria were met except Form 1's only recorded the surrogate spike recoveries for analysis with a dilution factor of 1. This does not affect the usability of the data.

METHOD BLANK

All the criteria were met.

TRIP BLANKS

No trip blank was acquired.

FIELD DUPLICATE SAMPLE PRECISION

No field duplicate was acquired.

LABORATORY CONTROL SAMPLES

All criteria were met except on laboratory control sample duplicate was performed.

MS/MSD

No MS/MSD were performed.

COMPOUND QUANTITATION

All criteria were met except the vacuum readings recorded on the Form 1's do not correlate with the Chain of Custody. This does not affect the usability of the data.

INITIAL CALIBRATION

All criteria were met.

CONTINUING CALIBRATION

All criteria were met.

GC/MS TUNING

All criteria were met.

CANISTER CERIFICATION BLANKS

All criteria were met.

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, PC, #208492, Centek Laboratories, LLC ID C1009023, submitted to Vali-Data of WNY, LLC on November 3, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analysis using Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

ORGANICS

The following items/criteria were reviewed for this report:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain-of-Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Tuning
- Canister Certification Blanks

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified as estimated in Internal Standards, below.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times for the samples were met.

INTERNAL STANDARD (IS)

The IS did meet criteria for all samples except the area of 1,4-Difluorobenzene was outside QC limits, high in sample; SG-6 with dilution factors 1 and 10. The area of Chlorobenzene-d_5 was outside QC limits, high in sample; SG-6 with a dilution factor of 1. All associated positive results should be qualified as estimated.

SURROGATE SPIKE RECOVERIES

All criteria were met except Form 1's only recorded the surrogate spike recoveries for analysis with a dilution factor of 1. This does not affect the usability of the data.

METHOD BLANK

All the criteria were met.

TRIP BLANKS

No trip blank was acquired.

FIELD DUPLICATE SAMPLE PRECISION

No field duplicate was acquired.

LABORATORY CONTROL SAMPLES

All criteria were met except on laboratory control sample duplicate was performed.

MS/MSD

No MS/MSD were performed.

COMPOUND QUANTITATION

All criteria were met except the vacuum readings recorded on the Form 1's do not correlate with the Chain of Custody. This does not affect the usability of the data.

INITIAL CALIBRATION

All criteria were met.

CONTINUING CALIBRATION

All criteria were met.

GC/MS TUNING

All criteria were met.

CANISTER CERIFICATION BLANKS

All criteria were met.

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, PC, #208492, Centek Laboratories, LLC ID C1007035, submitted to Vali-Data of WNY, LLC on November 3, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analysis using Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

ORGANICS

The following items/criteria were reviewed for this report:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain-of-Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Tuning
- Canister Certification Blanks

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified as estimated in Internal Standards, Compound Quantitation and Continuing Calibration. Minor issues, not affecting the usability of the data, are described in the laboratories 'Corrective Action Reports' and are outlined below.
Updated pages are included per Narrative and Data Reporting Forms, below.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except one regulator was not included in the Bottle Order form. The %Rec of Bromofluorobenzene was recorded incorrectly on the 'GC/MS QA QC Check Report'. The injection time was recorded incorrectly for the tune AH073002. The incorrect tune evaluation was included in the original package. Tune AH07303 was used, not tune AH073002. A page of the standards log was not included in the original package. No injection log for 8/2/10 was included in the original package. Updated pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met except the 'Vacuum start/stop' data was the time of stop and start of the collection of sample. This does not affect the usability of the data.

HOLDING TIMES

All holding times for the samples were met.

INTERNAL STANDARD (IS)

The IS did meet criteria for all samples except the area of Bromochloromethane was outside QC limits, high in sample SG-5 with dilution factor of 20. The area of 1,4-Difluorobenzene was outside QC limits, high in samples; SG-5 with dilution factors 1 and 20 and SG-1 with dilution factor of 20. The area of Chlorobenzene-d_5 was outside QC limits, high in samples; SG-1 with dilution factors 1 and 20, SG-2 and SG-3Dup with dilution factor of 1 and SG-5 with dilution factors of 1 and 20. All associated positive results should be qualified as estimated.

SURROGATE SPIKE RECOVERIES

All criteria were met except the %Rec of Bromofluorobenzene was outside the QC limits in samples SG-1, SG-2, SG-4, and SG-6 with dilution factor of 1.

METHOD BLANK

All the criteria were met.

TRIP BLANKS

No trip blank was acquired.

FIELD DUPLICATE SAMPLE PRECISION

All criteria were met for the field duplicate except the concentrations of several target analytes were higher (less then 10x) in SG-3DUP then in SG-3. Ethyl acetate, Heptane and Hexane yielded

concentrations approximately 20x greater in SG-3DUP then in SG-3. 2,2,4-Trimethylpentane, Chloroform, Cyclohexane, Styrene and Tetrachloroethene were detected in SG-3DUP but not in SG-3. Carbon Disulfide and Methylene Chloride were detected in SG-3 but not in SG-3DUP.

LABORATORY CONTROL SAMPLES

All criteria were met except the %Rec of 1,4-Dioxane in LCSD1UG-073010 and Bromoform in LSC1UG-080210 were outside QC limits.

The %RPD of 1,4-Dioxane, Ethyl acetate, Methyl ethyl Ketone and Vinyl acetate were outside QC limits.

MS/MSD

All criteria were met except the %Rec of several target analytes were outside QC limits, high and would be considered biased high. No target analytes were outside QC limits, low in both AA MS and AA MSD. The %Rec of Carbon tetrachloride did not include correction for the sample concentration. Updated pages are included.

The reference numbers recorded for the detected target analytes used to calculate %Rec are from the original run of sample AA MS/MSD with a dilution factor of 1.

COMPOUND QUANTITATION

All criteria were met except where indicated above in Surrogate Recoveries and Internal Standards. Carbon Tetrachloride was detected in SG-3Dup, Ambient Air and AA MS/MSD above the MDL, below the MRL and should be qualified as estimated.

INITIAL CALIBRATION

All criteria were met.

CONTINUING CALIBRATION

All criteria were met except the %D of 1,4-Dioxane and Bromoform were outside QC limits in AH080205. These target analytes should be qualified as estimated in the associated samples, blanks and spikes.

GC/MS TUNING

All criteria were met.

CANISTER CERIFICATION BLANKS

All criteria were met except where indicated above in Narrative and Reporting Forms.

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, PC, #208492, Centek Laboratories, LLC ID C1007034, submitted to Vali-Data of WNY, LLC on November 3, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analysis using Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

ORGANICS

The following items/criteria were reviewed for this report:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain-of-Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Tuning
- Canister Certification Blanks

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use. Minor issues, not affecting the usability of the data, are described in the laboratories 'Corrective Action Reports' and are outlined below.
Updated pages are included per Narrative and Data Reporting Forms, below.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except two canisters and regulators were not included in the Bottle Order form. The %Rec of Bromofluorobenzene was recorded incorrectly on the 'QC Summary Report' for the initial run for samples Room 134 and Room 1070. The incorrect tune evaluation was included in the original package. Tune AH07303 was used, not tune AH073002. A page of the standards log was not included in the original package. Updated pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met except the 'Vacuum start/stop' data was the time of stop and start of the collection of sample. This does not affect the usability of the data.

HOLDING TIMES

All holding times for the samples were met.

INTERNAL STANDARD (IS)

The IS did meet criteria for all samples.

SURROGATE SPIKE RECOVERIES

All criteria were met except the %Rec of Bromofluorobenzene was outside the QC limits in samples Room 134, Room 1070 and Room 1070MS.

METHOD BLANK

All the criteria were met.

FIELD AND TRIP BLANKS

All criteria were met.

FIELD DUPLICATE SAMPLE PRECISION

All criteria were met for the field duplicate except Cyclohexane was detected in Room 117Dup, Methyl butyl Ketone was detected in Room 117 and the concentration of Toluene was almost 10x greater in Room 117.

Cyclohexane was detected in Room 1070. Freon 114, Isopropyl alcohol and Tetrachloroethene were detected in sample Room 1070MS/MSD. Toluene was approximately 30x greater in Room 1070 then in Room 1070MS/MSD.

LABORATORY CONTROL SAMPLES

All criteria were met except the %Rec of 1,4-Dioxane in LCSD1UG-073010 was outside QC limits.

The %RPD of 1,4-Dioxane, Ethyl acetate, Methyl ethyl Ketone and Vinyl acetate were outside QC limits.

MS/MSD

All criteria were met except the %Rec of several target analytes were outside QC limits, low, in Room 1070MS/MSD and should be qualified as estimated in Room 1070MS/MSD and Room 1070. The %RPD of Tetrahydrofuran was outside QC limits.

The reference numbers recorded for the detected target analytes used to calculate %Rec are from the original run of sample Room 1070MS/MSD with a dilution factor of 1.

COMPOUND QUANTITATION

All criteria were met except where indicated above in Surrogate Recoveries.

INITIAL CALIBRATION

All criteria were met.

CONTINUING CALIBRATION

All criteria were met.

GC/MS TUNING

All criteria were met.

CANISTER CERIFICATION BLANKS

All criteria were met except where indicated above in Narrative and Reporting Forms.

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Instrument	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
V2	11/20/10 14:07	Vinyl Chloride	24.2	0.22	Action #1	TRIP BLANK

V10	11/17/10 08:29	Carbon Tetrachloride 2-Chloroethyl vinyl ether	29.7 -29.2	0.37 0.03	Action #1 Action #2	BW-5 OIL RECN+S BW-6 BW-7
V10	11/18/10 11:05	Carbon Tetrachloride Bromoform 2-Chloroethyl vinyl ether	32.3 25.5 -51.3	0.37 0.27 0.02	Action #1 Action #1 Action #2	BW-1

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.
Action #2: Positive results are qualified "J", estimated and nondetected analytes as "R", rejected.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	**Target Analyte(s)**	**Conc.**	**Flag sample results with a "U" if ≤ this value**	**Affected Sample(s)**
FB-1	Methylene Chloride	1.1 ug/L	11 ug/L	All Samples Except TRIP BLANK

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria, with the following exceptions:

LCS ID	Compound	QC Criteria	LCS %R	Corrective Action	Affected Samples
LCSD-55748	Tetrachloroethene	45-150	153	Action #1	Trip Blank BW-6DL BW-7DL DUP-1 FB-1 BW-5

Action #1: Positive results are qualified "J", estimated and nondetected results are not qualified.
Action #2: Positive results are qualified "J", estimated and nondetected results are qualified "UJ", estimated.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria, without exception.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Terphenyl-d14	S03	30-125
Phenol-d5	S04	40-100

If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. If the surrogate percent recovery is less than 10%, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "R", rejected. All SVOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria, with the following exceptions:

LCS ID	Compound	QC Criteria	LCS %R	Corrective Action	Affected Samples
LCS-55649	1,2-Dichlorobenzene	45-95	97	Action #1	BW-5 OIL
	2-Methylphenol	40-105	113	Action #1	BW-1

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Surrogate		**Criteria (%)**
Tetrachloro-m-xylene	S01	25-140
Decachlorobiphenyl	S02	30-135

Project Sample ID	S01 Col. 1 %R	S01 Col. 2 %R	S02 Col. 1 %R	S02 Col. 2 %R	Positive Results	Non Detect (ND)
BW-5	**160**	83	90	94	J	Not Qualified

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. However, the sample results for Sample BW-5 were reported from Column 2, which had surrogate recoveries within the acceptance limit. Therefore, no qualification of the sample data is recommended.

Target Compound Identification

Target compounds that were detected in the project samples were detected in both GC columns at comparable concentrations that ensures no interfering analytes are present, with the following exceptions. For sample BW-5, the %Ds between the concentrations in the columns for delta-BHC, gamma-BHC (Lindane), and Heptachlor were above the method specified limit. For sample BW-5 OIL, the %Ds between the concentrations in the columns for Endosulfan II and gamma-Chlordane were above the method specified limit. These indicate the possible presence of interfering analytes. The lower of the column concentrations is reported for these analytes and the results are qualified as "J", estimated.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		**Criteria (%)**
Tetrachloro-m-xylene	S01	34-147
Decachlorobiphenyl	S02	60-125

Project Sample ID	S01 Col. 1	S01 Col. 2	S02 Col. 1	S02 Col. 2	Positive Results	Non Detect (ND)
	%R	%R	%R	%R		
BW-5 OIL	96	78	68	38	J	UJ

If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated. The sample result for Aroclor-1254 in sample BW-5 OIL was reported from Column 2, so this compound should be qualified as noted above. All other compounds were reported from Column 1 and therefore should not be qualified.

Laboratory Control Sample (LCS) and MS/MSD Recoveries

LCS and MS/MSD recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Target Compound Identification

Target compounds that were detected in the project samples were detected in both GC columns at comparable concentrations that ensures no interfering analytes are present, with the following exceptions. For samples BW-5 OIL and RECN+S, the %Ds between the concentrations in the columns for Aroclor-1254 were above the method specified limit, which indicates the possible presence of interfering analytes. The lower of the column concentrations are reported for these analytes and the results are qualified as "J", estimated.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Total Petroleum Hydrocarbons (TPH)

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Gas Chromatography/Flame Ionization Detector (GC/FID) Instrument Performance Check

GC/FID instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal the amount in any blank. Target compounds were not identified in associated blank samples at a concentration above the MDL without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Ortho-Terphenyl	S01	50-150

Project Sample ID	S01 Col. 1 %R	Positive Results	Non Detect (ND)
RECN+S	0	J	UJ

If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated. The sample result for TPH in sample RECN+S should be qualified as noted above.

Laboratory Control Sample (LCS) and MS/MSD Recoveries

LCS and MS/MSD recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Metals

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in the associated blank sample.

Target compounds were not identified in associated blank samples at a concentration above the MDL for metals analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
MB-55594	Calcium	126 ug/L	630 ug/L	BW-5
	Iron	77.2 ug/L	386 ug/L	BW-6
	Sodium	38.8 ug/L	194 ug/L	BW-7
	Zinc	7.74 ug/L	38.7 ug/L	BW-8
				DUP-1
MB-55684	Aluminum	2.12 mg/kg	10.6 mg/kg	BW-1
	Beryllium	0.002 mg/kg	0.01 mg/kg	BW-5 OIL
	Magnesium	2.0 mg/kg	10 mg/kg	RECN+S

Note: Preparation Blank associated samples include all samples analyzed within the sample analytical batch.

Interference Check Sample Analysis

The interference check sample solution percent recoveries (%Rs) fell within the method required control limits without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Analysis

The LCS %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

The MS/MSD %Rs fell within the method required control limits (75-125%) without exception. No qualification of the data is recommended.

Laboratory Duplicate Analysis

The laboratory duplicate percent differences (%Ds) fell within the method required control limits without exception. No qualification of the data is recommended.

ICP Serial Dilution Analysis

The ICP Serial Dilution %Ds fell within the method required control limits, with the following exceptions:

ICP Serial Dilution ID	Compound	%D	Corrective Action	Affected Samples
BW-6	Barium	41	Action #1	All Aqueous Samples

Action #1: Positive results were qualified as "J", estimated and nondetected results were qualified as "UJ", estimated detection limit.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "B" qualifiers, which indicate an estimated value because the result was between the RL and MDL, were changed to "J" qualifiers by the data reviewer.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, P.C., project located at 690 St. Paul St., Work order 208492, Mitkem Laboratories SDG ID#SJ1878, submitted to Vali-Data of WNY, LLC on December 10, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analyses using USEPA methods, 8260 (Volatile Organics), 8270 (SemiVolatile Organics), 8081 (Pesticides), 8082 (PCBs), 6010 (Inorganics), 7470/7471(Mercury). These samples were not validated for Thorium analysis.
