Notes:
VOC analysis by United States Environmental Protection Agency (USEPA) Method SW846 8260.
Bold type indicates that the constituent was detected above NYCRR Part 375-6.8(b) Restricted Use Soil Cleanup Objectives: Protection of Groundwater
Grey shaded samples indicate documentation samples collected from the Site's eastern property line.
J – Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.
D - Indicates that the value was obtained from a secondary dilution anaylsis.
U - Indicates that the constituent was not detected above laboratory method detection limit (MDL).
R - Indicates the quality control associated with the analysis or analyte indicates severe uncertainty with the reported result. The analyte was analyzed for, but the presence or absence of the analyte has not been verified.
NA = Not Applicable or Not Available
*Indicates no Part 375-6 SCO for this compound; SCO from NYSDEC Commissioner Policy 51 Supplemental SCOs for Protection of Groundwater
**Indicates no Part 375-6 SCO for this compound; SCO from NYSDEC Commissioner Policy 51 Supplemental SCOs for Protection of Ecological Resources

Notes:
VOC analysis by United States Environmental Protection Agency (USEPA) Method SW846 8260.
Bold type indicates that the constituent was detected above NYCRR Part 375-6.8(b) Restricted Use Soil Cleanup Objectives: Protection of Groundwater
Grey shaded samples indicate documentation samples.
J – Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.
D - Indicates that the value was obtained from a secondary dilution anaylsis.
U - Indicates that the constituent was not detected above laboratory method detection limit (MDL).
R - Indicates the quality control associated with the analysis or analyte indicates severe uncertainty with the reported result. The analyte was analyzed for, but the presence or absence of the analyte has not been verified.
NA = Not Applicable or Not Available
*Indicates no Part 375-6 SCO for this compound; SCO from NYSDEC Commissioner Policy 51 Supplemental SCOs for Protection of Groundwater
**Indicates no Part 375-6 SCO for this compound; SCO from NYSDEC Commissioner Policy 51 Supplemental SCOs for Protection of Ecological Resources

Notes:
SVOC analysis by United States Environmental Protection Agency (USEPA) Method SW846 8270.
Bold type indicates that the constituent was detected at a concentration above the NYCRR Part 375-6.8(b) Standard: Protection of Groundwater
Brown shaded samples indicate this portion of the excavation was subsequently removed due to elevated constituent levels.
J – Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.
D - Indicates that the value was obtained from a secondary dilution anaylsis.
U - Indicates that the constituent was not detected.
NA = Not Applicable or Not Available

Notes:

VOC analysis by United States Environmental Protection Agency (USEPA) Method SW846 8260.

These samples were collected for waste characterization purposes only. The sample location areas were excavated as part of the IRM.

Bold type indicates that the constituent was detected above NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives.

U - Indicates that the constituent was not detected above the indicated laboratory method detection limit.

NA = Not Applicable or Not Available

*Indicates no Part 375-6 SCO for this compound; SCO from NYSDEC Commissioner Policy 51 Supplemental SCOs for Protection of Groundwater

Summary of Pre-IRM Waste Characterization Samples - Polychlorinated Biphenyls (PCBs)
Results in Milligrams per Kilogram (mg/Kg) or Parts Per Million (PPM)

Sample ID	AOC-6 (A thru D) Composite Sample		NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives	NYCRR Part 375-6.8(b) Restricted Use Soil Cleanup Objectives: Protection of Public Health: Restricted Residential	NYCRR Part 375-6.8(b) Restricted Use Soil Cleanup Objectives: Protection of Groundwater
Sample Collection Date	7/6/2012				
Polychlorinated Biphenyls					
Aroclor 1016	ND<0.426	U	NA	NA	NA
Aroclor 1221	ND<0.426	U	NA	NA	NA
Aroclor 1232	ND<0.426	U	NA	NA	NA
Aroclor 1242	ND<0.426	U	NA	NA	NA
Aroclor 1248	ND<0.426	U	NA	NA	NA
Aroclor 1254	ND<0.426	U	NA	NA	NA
Aroclor 1260	ND<0.426	U	NA	NA	NA
TOTAL	0.000	U	0.1	1	3.2

Notes:

PCB analysis by United States Environmental Protection Agency (USEPA) Method SW846 8082.

U - Indicates that the constituent was not detected.

Silver	ND<1.12	U	2	180	1,500

TAL Metal analysis by United States Environmental Protection Agency (USEPA) Method SW846 6010/7470/7471

Bold type indicates that the constituent was detected above NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives.

U - Indicates that the constituent was not detected.

D - Indicates duplicate results outside of QC limits. May indicate a non-homogenous matrix.

Summary of Pre-IRM Waste Characterization Samples - Miscellaneous Parameters
Results in Milligrams per Kilogram (mg/Kg) or Parts Per Million (PPM)

Sample ID	Sample Collection Date	Flashpoint (°C)	pH (at 21.8°C)	Reactive Cyanide (ppm)	Reactive Sulfide (ppm)
AOC-6 (A thru D) Composite Sample	7/6/2012	>70.0	8.18	ND<100 U	ND<100 U
WC-IRM-01 (9'-11.5')	7/6/2012	>70.0	NA	NA	NA
WC-IRM-02 (9'-11')	7/6/2012	>70.0	NA	NA	NA
WC-IRM-03 (6.5'-8')	7/6/2012	29.0	NA	NA	NA

Flashpoint analysis by United States Environmental Protection Agency (USEPA) Method SW846 1010
pH analysis by United States Environmental Protection Agency (USEPA) Method SW846 9045C
Reactive cyanide analysis by United States Environmental Protection Agency (USEPA) Method 335.4/SW 7.3.3.2
Reactive sulfide analysis by United States Environmental Protection Agency (USEPA) Method SW 7.3.4.2
U - Indicates that the constituent was not detected above the indicated laboratory method detection limit.
NA - Indicates that this sample was not tested for this parameter.

Notes:
* Asterik indicates the value listed is the New York State Department of Health (NYSDOH) Air Guideline established in Table 3.1 of the NYSDOH Guidance titled "Evaluating Soil Vapor Intrusion in the State of New York", October 2006. The USEPA BASE Database (see below) was also provided for typical background for commercial buildings in order to evaluate compounds not listed in the Table 3.1 of the NYSDOH Guidance.
- USEPA Building Assessment and Survey Evaluation (BASE) Database (90th Percentile). As recommended in Section 3.2.4 of the NYSDOH Guidance (Refer to Footnote "1") this database is referenced for the indoor air sampling results. This database is also referenced to provide initial benchmarks for comparison to the air sampling data and does not represent regulatory standards or compliance values.
- **Bold** denotes value is greater than the NYSDOH Air Guideline (see above) or if there is no NYSDOH Air Guideline then the value is greater than the USEPA BASE Database 90th Percentile, see above.
- U qualifier denotes laboratory identifed as 'non-detect' at the detection limit shown.
- Compounds listed represent sub-set of complete list of VOCs tested (USEPA TO-15)
- Duplicate identifies a Duplicate Sample collected from this location
- MS/MSD identifies a Matrix Spike/Matrix Spike Duplicate Sample was collected from this location for Quality Control purposes.
- 90th Percentile of Indoor Air Data calculated based on the following Microsoft Excel formula: ROUND(90/100*number of data points+0.5),0)
- Mean, Standard Deviation, and Range are inclusive of all analytical results including "non-detect" concentrations (as qualified by "U" qualifier). Non-detect concentrations were determined by using the reported laboratory method detection limit provided by the analytical laboratory.

Notes:

* Asterik indicates the value listed is the New York State Department of Health (NYSDOH) Air Guideline established in Table 3.1 of the NYSDOH Guidance titled "Evaluating Soil Vapor Intrusion in the State of New York", October 2006. The USEPA BASE Database (see below) was also provided for typical background for commercial buildings in order to evaluate compounds not listed in the Table 3.1 of the NYSDOH Guidance.

- USEPA Building Assessment and Survey Evaluation (BASE) Database (90th Percentile). As recommended in Section 3.2.4 of the NYSDOH Guidance (Refer to Footnote "1") this database is referenced for the indoor air sampling results. This database is also referenced to provide initial benchmarks for comparison to the air sampling data and does not represent regulatory standards or compliance values.
- **Bold** denotes value is greater than the NYSDOH Air Guideline (see above) or if there is no NYSDOH Air Guideline then the value is greater than the USEPA BASE Database 90th Percentile, see above.
- U qualifier denotes laboratory identified as 'non-detect' at the detection limit shown.
- Compounds listed represent sub-set of complete list of VOCs tested (USEPA TO-15)
- Duplicate identifies a Duplicate Sample collected from this location
- MS/MSD identifies a Matrix Spike/Matrix Spike Duplicate Sample was collected from this location for Quality Control purposes.
- 90th Percentile of Indoor Air Data calculated based on the following Microsoft Excel formula: ROUND((90/100*number of data points+0.5),0)
- Mean, Standard Deviation, and Range are inclusive of all analytical results including "non-detect" concentrations (as qualified by "U" qualifier). Non-detect concentrations were determined by using the reported laboratory method detection limit provided by the analytical laboratory.

Notes:
* Asterik indicates the value listed is the New York State Department of Health (NYSDOH) Air Guideline established in Table 3.1 of the NYSDOH Guidance titled "Evaluating Soil Vapor Intrusion in the State of New York", October 2006. The USEPA BASE Database (see below) was also provided for typical background for commercial buildings in order to evaluate compounds not listed in the Table 3.1 of the NYSDOH Guidance.

- USEPA Building Assessment and Survey Evaluation (BASE) Database (90th Percentile). As recommended in Section 3.2.4 of the NYSDOH Guidance (Refer to Footnote "1") this database is referenced for the indoor air sampling results. This database is also referenced to provide initial benchmarks for comparison to the air sampling data and does not represent regulatory standards or compliance values.
- **Bold** denotes value is greater than the NYSDOH Air Guideline (see above) or if there is no NYSDOH Air Guideline then the value is greater than the USEPA BASE Database 90th Percentile, see above.
- U qualifier denotes laboratory identifed as 'non-detect' at the detection limit shown.
- Compounds listed represent sub-set of complete list of VOCs tested (USEPA TO-15)
- Duplicate identifies a Duplicate Sample collected from this location
- MS/MSD identifies a Matrix Spike/Matrix Spike Duplicate Sample was collected from this location for Quality Control purposes.
- 90th Percentile of Indoor Air Data calculated based on the following Microsoft Excel formula: ROUND((90/100*number of data points+0.5),0)
- Mean, Standard Deviation, and Range are inclusive of all analytical results including "non-detect" concentrations (as qualified by "U" qualifier). Non-detect concentrations were determined by using the reported laboratory method detection limit provided by the analytical laboratory.

Notes:
* Asterik indicates the value listed is the New York State Department of Health (NYSDOH) Air Guideline established in Table 3.1 of the NYSDOH Guidance titled "Evaluating Soil Vapor Intrusion in the State of New York", October 2006. The USEPA BASE Database (see below) was also provided for typical background for commercial buildings in order to evaluate compounds not listed in the Table 3.1 of the NYSDOH Guidance.

- USEPA Building Assessment and Survey Evaluation (BASE) Database (90th Percentile). As recommended in Section 3.2.4 of the NYSDOH Guidance (Refer to Footnote "1") this database is referenced for the indoor air sampling results. This database is also referenced to provide initial benchmarks for comparison to the air sampling data and does not represent regulatory standards or compliance values.
- **Bold** denotes value is greater than the NYSDOH Air Guideline (see above) or if there is no NYSDOH Air Guideline then the value is greater than the USEPA BASE Database 90th Percentile, see above.
- U qualifier denotes laboratory identifed as 'non-detect' at the detection limit shown.
- Compounds listed represent sub-set of complete list of VOCs tested (USEPA TO-15)
- Duplicate identifies a Duplicate Sample collected from this location
- MS/MSD identifies a Matrix Spike/Matrix Spike Duplicate Sample was collected from this location for Quality Control purposes.
- 90th Percentile of Indoor Air Data calculated based on the following Microsoft Excel formula: ROUND((90/100*number of data points+0.5),0)
- Mean, Standard Deviation, and Range are inclusive of all analytical results including "non-detect" concentrations (as qualified by "U" qualifier). Non-detect concentrations were determined by using the reported laboratory method detection limit provided by the analytical laboratory.

Mercury	0.0479 D	NA	0.81	0.81	0.73	0.001-0.2
Selenium	ND<0.298	NA	36	180	4	0.1-3.9
Silver	ND<0.597	NA	36	180	8.3	NA

Notes:
ND denotes compound not detected above the laboratory method detection limit shown.
NA denotes the sample was "Not Analyzed" for this metal.
NS denotes there is not Protection of Groundwater SCO for this compound.
D = Duplicate results outside laboratory Quality Control (QC) limits. May indicate a non-homogenous matrix.
M = Matrix spike recoveries outside laboratory QC limits. Matrix bias indicated.

Confirmatory Soil Sample Analytical Results Summary
IRM – 2008 Remedial Excavation
Detected Volatile Organic Compounds Only
690 St. Paul Street, Rochester, New York
Analysis for SVOCs by USEPA Method 8270C NYSDEC STARS List Compounds Only
Results Shown in Milligrams per Kilogram (mg/Kg) or about Parts Per Million (ppm)

Parameter	Sample ID No.																NYCRR Part 375-6 Recommended Soil Cleanup Objectives for the Protection of Public Health - Residential Use	NYCRR Part 375-6 Recommended Soil Cleanup Objectives for the Protection of Public Health - Restricted Residential Use	NYCRR Part 375-6 Recommended Soil Cleanup Objectives for the Protection of Groundwater

NOTES:
(1) RSCOs Referenced in NYCRR Part 375-6 Table 375-6.8.
(2) As per Part 375-6 Table 375-6.8, individual and the sum of total VOCs, including tentatively identified compounds are not to exceed 100,000-µg/kg.
Bold Type denotes that the detected value exceeds its associated NYCRR Part 375-6 Recommended Soil Cleanup Objective for the Protection of Groundwater.
Bold & Highlighted type denotes that the detected value exceeds its associated NYCRR Part 375-6 Recommended Soil Cleanup Objective for the Protection of Public Health - Residential Use.
Bold, Highlighted, & Italicized type denotes that the detected value exceeds its associated NYCRR Part 375-6 Recommended Soil Cleanup Objective for the Protection of Public Health - Restricted Residential Use.
‡ denotes that the RSCO and Soil Cleanup Objective to Protect Groundwater Quality is for total xylenes (i.e. m+p-xylene plus o-xylene)
† denotes that the excavation sidewalls in the vicinity of CS-5 and CS-12 were excavated further back and resampled.
ND denotes compound not detected above the method detection limit shown.
NYSDEC STARS List VOC analysis by USEPA Method 8260B.
MDL denotes the reported laboratory Method Detection Limit.

Notes:
Dissolved gas analysis by United States Environmental Protection Agency (USEPA) Method RSK175.
Metals analysis by USEPA Method SW846 6010C.
General chemistry analyses by USEPA Methods 300, SM 4500D S-, SM 5310B TOC .
Results expressed in parts per billion (ppb) or parts per million (ppm), as noted
D - Indicates that the value was obtained from a secondary dilution anaylsis.
U - Indicates that the constituent was not detected.
R - Relative percent difference outside of accepted recovery limits.
*Refers to screened interval or length of open rock, depending on well construction.
NA - Indicates not applicable, not sampled.

Notes:
VOC analysis by United States Environmental Protection Agency (USEPA) Method SW846 8260B.
ND indicates that the compound was analyzed for, but not detected at of above the Contract Required Quantitation Limit (CRQL), or the compound was not detected due to qualification through the method or field blank.
J = Estimated value – The analyte was positively identified; but the associated numerical value is the approximate concentration of the analyte in the sample.
B = Denotes that the analyte was detected in the associated blank, as well as in the sample.
NA = Not Applicable or Not Available
PPB = Parts per Billion
Indicates Mobile Laboratory Data
Indicates sample is a DUPLICATE sample.
Highlighted values indicate exceedance of the NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives for the Protection of Public Health: Unrestricted Use.
Bold values indicate exceedance of the NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives for the Protection of Public Health: Restricted Residential Use.
~~Strikethrough~~ **Denotes soil removed during IRM Activities or during Test Pitting Activities.**

Notes:

TAL Metals analysis by United States Environmental Protection Agency (USEPA) SW846 Methods 6010 (TAL Metals) and 7471 (Mercury)

J – Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.

N - indicates spiked sample recovery not within control limits.

E - indicates a value estimated or not reported due to the presence of interferences.

B - indicates that the constituent was also found in the associated blank.

Highlighted type indicates that the constituent was detected at a concentration above the NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives for the Protection of Public Health: Unrestricted Use

Bold type indicates a concentration above the NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives for the Protection of Public Health: Restricted Residential Use.

Italicized type indicates a concentration above the NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives for the Protection of Groundwater.

PPM = Parts per Million

Indicates sample is a DUPLICATE of the sample preceeding this sample.

~~Denotes soil removed during IRM Activities or during Test Pitting Activities~~

Dear Mr. Gullace:

Subject: Geophysical Survey Results, 690 St Paul St, Rochester, NY

1.0 INTRODUCTION

This letter report presents the results of the geophysical investigation performed for the Genesee Valley Real Estate Co in support of an environmental investigation being conducted by LaBella Associates, P.C. of a property located at 690 St. Paul St in Rochester, NY (the Site).

The geophysical investigation was designed to geophysically characterize the subsurface and focus a follow-up intrusive investigation. The information provided herein is intended to assist LaBella with their assessment of potential environmental concerns at the Site. The objective for the geophysical survey was to explore for anomalies indicative of underground storage tanks (USTs). AMEC Geomatrix, Inc. performed data acquisition on August 31 and September 25, 2009.

2.0 METHODOLOGY

A reference grid was installed at the site to facilitate data acquisition along lines spaced 3 ft apart. The grid was marked with orange and white spray paint. The site was geophysically surveyed using the Geonics EM61. The EM61 unit is a high sensitivity, high resolution time domain electromagnetic (TDEM) metal detector that can detect both ferrous and nonferrous metallic objects. It has an approximate investigation depth of 10 feet. The processing console is contained in a backpack worn by the operator which is interfaced to a digital data logger. The transmitter and two receiver coils are located on a two-wheeled cart that is pulled by the operator.

The device's transmitter coil generates a pulsed primary EM field at a rate of 150 pulses per second, inducing eddy currents into the subsurface. The decay rates of these eddy currents are measured by two, 3.28 foot by 1.64 foot (1 meter by ½ meter) rectangular receiver coils. By taking the measurements at a relatively long time frame after termination of the primary pulse, the response is

practically independent of the survey area's terrain conductivity. Specifically, the decay rates of the eddy currents are much longer for metals than for normal soils allowing the discrimination of the two.

EM61 in use (photo not from this site)

Data are collected from the EM61's two receiver coils. One of the receiver coils is located coincident to the transmitter coil. The other receiver coil is located 1.31 feet (0.4 meters) above the transmitter coil. Data from the top receiver coil are stored on Channel 1 of a digital data logger. Data from the bottom receiver coil are stored on Channel 2 of the data logger. Channel 1 and Channel 2 data are simultaneously recorded at each station location. The instrument responses are recorded in units of milliVolts (mV). Data were recorded digitally by a data logger at a rate of approximately 2 measurements per foot along the survey lines which were spaced 3 feet apart.

3.0 RESULTS

The following sections present the results from the geophysical investigation.

The EM61 data for the site are shown in Figure 1. The color bar to the right of the map indicates the colors associated with the respective measured values. Areas suspected to be free of buried metals are shown as color shades of light blue. All areas exhibiting a response greater than background (0 to 30 mVolts) likely contain buried metals. These areas are depicted in shades of dark blue through yellow on the figure.

Anomalous Area A is a zone of buried metal anomalies located in the northwest portion of the survey area. This anomalous zone is roughly rectangular and may represent a former property parcel with a unique history. Any of the anomalies within this area may be significant from an environmental perspective.

Anomalies B and C are metal anomalies that likely represent (now buried) reinforced concrete slabs. The ground surface in these areas appears to be asphalt however the rectilinear nature of the anomalies

and their locations relative to entrance drives suggests that they may be related to buried concrete slabs.

Anomalies D, E and F are buried metal anomalies located south of the current playground. These anomalies may represent surface features that were not noted (such as a manhole) or they may be of environmental significance. Anomaly E coincided with a north-south trending sidewalk and it may be related to reinforcement metal in a section of replaced sidewalk

Any of the additional above background responses may be related to UST's however they are more likely related to miscellaneous buried metals.

4.0 LIMITATIONS

The geophysical methods used during this survey are established, indirect techniques for non-destructive subsurface reconnaissance exploration. As these instruments utilize indirect methods, they are subject to inherent limitations and ambiguities. Metallic surface features (electrical wires, scrap metal, etc.) preclude reliable non-invasive data/results beneath, and in the immediate vicinity of, the surface features. Targets such as buried drums, buried tanks, conduits, etc. are detectable only if they produce recognizable anomalies or patterns against the background geophysical data collected. As with any remote sensing technique, the anomalies identified during a geophysical survey should be further investigated by other techniques such as historical aerial photography, test pit excavation and/or test boring, if warranted.

Please do not hesitate to contact us if you have any questions or require additional information.

Sincerely yours,

AMEC GEOMATRIX, INC.

TRANSMITTAL
FINAL Report
Aestus' GeoTrax Survey™ Site Characterization Work
690 Saint Paul Street Site
Rochester, New York

Dear Dan:

Please find the enclosed subject report. This final report incorporates LaBella Associates, P.C.'s (LaBella's) comments on our previous report submitted on October 2, 2010. Please provide a copy of this report to our mutual client, Dante Gullace, Esq. of Genesee Valley Real Estate Company, LLC, as appropriate.

If LaBella collects additional technical data from a drilling/sampling program, we would be pleased to post confirmation drilling data onto our survey images and refine our initial interpretations, as appropriate based on these data, such that we facilitate improved understanding of subsurface conditions at the 690 Saint Paul Street Site. These revised data and interpretations could be included in a revised final report.

We appreciate the opportunity to assist you with this project and look forward to reviewing our report with you at your earliest convenience. Please call with questions at 1.888.GEO.TRAX or 970.278.4090.

Very Truly Yours,

Aestus, LLC

EXECUTIVE SUMMARY

Aestus, LLC (Aestus) recently performed a high resolution electrical resistivity imaging (GeoTrax Survey™) investigation for LaBella Associates, P.C. (LaBella) at Genesee Valley Real Estate Company, LLC's 690 Saint Paul Street Site located in Rochester, New York. This site was formerly used as a Bausch and Lomb manufacturing facility and is currently leased to various tenants. The project objectives of this investigation program were to use Aestus' GeoTrax Survey™ technology to assist LaBella with investigating the subsurface for the presence of hydrocarbon and/or chlorinated related impacts, as well as to help determine if underground utility corridors could represent possible contaminant migration pathways at the site.

A total of six GeoTrax Surveys™ were performed and Aestus employed its "Common Earth Model" approach (see Section 4.2.1) to effectively view available data (i.e., from our survey work and from previous site investigations) together, which in our experience is a powerful approach relative to gleaning useful knowledge and meaning from the various data sets. Specifically, Aestus posted available soil boring and monitoring well data to our survey images to calibrate the ranges of resistivity detected to known levels of contamination at discrete points. Once calibrated, Aestus' survey results were used in an effort to better understand contaminant distribution in areas surveyed and between discrete boring/well points. Aestus' 2-D GeoTrax Survey™ images were also visualized relative to one another using Rockworks™ 3-D modeling software in a fence diagram format (see Figures 8 through 11 and viewable 3-D model files contained on the CD-ROM enclosed with the hardcopy version of this report).

The detailed results of Aestus' work at this site are presented in this report and have been based upon a review of the "Common Earth Model" results. The following conclusions are offered based upon information available at the time this report was prepared. Such conclusions are subject to revision based on any follow up confirmation drilling/sampling data obtained from anomalous subsurface locations detected by Aestus:

- ✓ Aestus detected both electrically conductive (i.e., low resistivity) and electrically resistive (i.e., high resistivity) anomalies within the subsurface at the 690 Saint Paul Street Site. The presence of both electrically resistive anomalies (typically representative of unweathered hydrocarbon and/or chlorinated solvent related constituents) and electrically conductive anomalies (often representative of weathered hydrocarbon and/or chlorinated solvent related constituents) suggests releases may potentially have been occurring over time. It should also be noted that such anomalies could be representative of geologic features, underground utilities, leakage from underground utilities (e.g., sewage) or subsurface structures.
- ✓ Most of the resistive anomalies identified at the site are located to the Northeast of Building 14B near the area where remedial excavation has been completed and a playground now exists (see green dashed circle on Figure 8). Logs from several of the test pits in the shallow subsurface of this area indicated elevated PID readings which may indicate that some level of impact persists despite remedial efforts (see test pits 2 and 5 on Image ROC-04, Figure 5). Starting at about 15 feet BGS, image ROC-04 (Figure 5) shows resistive anomalies with higher resistivity values than anomalies in the shallow subsurface which may indicate residual source zones of hydrocarbon and/or chlorinated solvent related constituents.

© 2010 Aestus, LLC

- To the Northwest of Building 14B, parallel to St. Paul Street, surveys ROC-02 and ROC-03 (Figures 3 and 4, respectively) show areas that are consistently more electrically conductive than other areas surveyed at the site. These conductive areas may represent zones of saturated, weathered dolomite. However, the detected resistivity values in this area are typically 1 ohm-meter or less which is abnormally conductive and indicates the potential presence of weathered hydrocarbon and/or chlorinated solvent related constituents. It is also possible that these anomalies are caused by sewage related contamination from nearby sanitary sewer lines which could have leaked.
- Images ROC-05 and ROC-06 (Figures 6 and 7, respectively), which ran through the hallway of Buildings 14 and 16A, show several electrically conductive and resistive anomalies.
- Figure 11 shows a modeled water table from data collected on January 29, 2009 along with the GeoTrax Surveys™ in 3D. Most of the highly resistive anomalies, which may indicate unweathered hydrocarbon and/or chlorinated solvent related constituents, are below the water table. The resistive anomalies below the water table may reflect chlorinated solvent related constituents, or zones of competent dolomite. From what is known currently from available boring logs and test pits, the dolomite at the site is highly weathered which decreases the probability that the resistive anomalies represent only clean geology.
- ROC-01 (see Figure 2) has electrically resistive anomalies present in the general vicinity of existing monitoring well BW-4, which has previously indicated the presence of benzene and solvents dissolved in groundwater at concentrations above regulatory limits. Although this well is not located exactly coincident with our GeoTrax Survey™ line, these data could suggest a correlation between resistive anomalies and the presence of hydrocarbon and/or chlorinated solvent related constituents.
- ROC-02 (see Figure 3) shows a large vertical resistive anomaly starting at about 100 feet laterally along the image. This anomaly could represent impacts by hydrocarbon and/or chlorinated solvent related constituents. This anomaly corresponds with the location of a traffic utility junction box at ground surface. It is possible that contaminant migration through utility corridors is responsible for this anomaly.
- ROC-03 (see Figure 4) shows two resistive anomalies in close proximity to two manholes at the ground surface. These anomalies may be caused by construction of the manholes and/or may represent an area of potential preferential contaminant migration.

- On survey ROC-05 (see Figure 6) there is an extremely resistive scallop-shaped anomaly that appears between about 40 and 90 feet along the image. The resistivity value of this anomaly may be exaggerated due to the strong conductive zone located just above the resistive anomaly. It is possible that hydrocarbon and/or chlorinated solvent related constituents may be the primary cause of the conductive and/or resistive anomalies.

Based on initial interpretations of the Common Earth Model data contained in this report, it appears to Aestus that this investigation may not have located the lateral extent of subsurface impacts at the 690 Saint Paul Street Site. Furthermore, it appears that

© 2010 Aestus, LLC

contaminant distribution in the subsurface is likely complex at this site. Follow-up confirmatory soil borings and monitoring wells will help to refine the results of this study and determine whether some or all of the anomalies are caused by geologic conditions, presence of utilities, potential leakage from utilities, and/or the presence of hydrocarbon and/or chlorinated related impacts. Section 6.0 of this report provides Aestus' recommendations for further improving the understanding of subsurface conditions at the 690 Saint Paul Street Site.

1.0 INTRODUCTION

Aestus, LLC (Aestus) recently performed a high resolution electrical resistivity imaging (GeoTrax Survey™) investigation for LaBella Associates, P.C. (LaBella) at Genesee Valley Real Estate Company, LLC's 690 Saint Paul Street Site located in Rochester, New York. This site was the former location of a Bausch and Lomb manufacturing facility and is currently leased to various tenants. A total of six GeoTrax Surveys™ were performed at the site.

1.1 Project Objectives

The project objectives of this investigation program were to use Aestus' GeoTrax Survey™ technology to assist LaBella with investigating the subsurface for the presence of hydrocarbon and/or chlorinated solvent related impacts, as well as to help determine if underground utility corridors could be serving as contaminant migration pathways at the site.

Aestus' scope of work for this project was to use our subsurface imaging technology to scan the earth's subsurface (i.e., to depths of ~36 feet) at survey locations selected jointly by LaBella and Aestus to identify subsurface anomalies that may require focused additional investigation via direct sampling.

1.2 GeoTrax Survey™ Technology Overview

Electrical resistivity imaging (ERI) measurements have been used since the 1830's to interpret the earth. ERI works by imparting an electrical current into the ground at a constant rate, and then taking voltage measurements at one or more other locations along a straight survey line. Based on these data, the apparent resistivity of subsurface materials is calculated using Ohm's Law.

Similar to a single pixel in a digital photo, a single resistivity measurement does not yield significant information. However, modern ERI technology combined with current computer processing speeds, facilitate hundreds or thousands of resistivity measurements in a short timeframe. These measurements are performed along a survey alignment and are subsequently used to produce a two-dimensional image (analogous to a CAT-scan in the medical industry) of the subsurface that graphically illustrates the presence or absence of subsurface anomalies.

Our GeoTrax Survey™ technology is based on conventional ERI techniques. However, we have vastly improved the technology and apply our proprietary data collection algorithms and software to achieve more comprehensive data collection, higher data quality, and ultimately increased image resolution, relative to conventional ERI technology.

Continuous subsurface images based on high data density, eliminate the need for interpolation between data points such as soil borings or wells, and assists in confirming or redefining the site conceptual model. Our GeoTrax Survey™ technology has been successfully used for a number of applications including detection of hydrocarbon and chlorinated solvent related constituents.

The following sections of this report summarize the Aestus' field work, data collection, and data processing activities, and provide our interpretations, conclusions, and recommendations based on the results of our site investigation.

© 2010 Aestus, LLC

2.0 GEOTRAX SURVEY™ FIELD WORK

Aestus personnel conducted field work on August 25 and August 26, 2009. We performed a total of six high resolution surveys as outlined in our proposal to LaBella dated August 19, 2009.

2.1 Equipment Layout, Land Surveying, Documentation

Each survey was conducted by installing 56 specialized electrodes into the ground along a straight line and at a specific interval as indicated below. The spacing used on each line was determined on-site to provide the appropriate depth of imaging and/or to conform to lateral space constraints due to buildings, busy streets, property lines, etc. The target depth of interest for investigation at the 690 Saint Paul Street Site was approximately 10-20 feet BGS and therefore a 1.0 meter electrode stake spacing was selected for the surveys which provided an imaging depth of 36 feet such that the depth of interest was not coincident with the bottom of our survey images.

Figure 1A shows the location and orientation (i.e., the red ends of the survey lines are equivalent to Electrode 1 and the blue ends are equivalent to Electrode 56) of the surveys performed at the 690 Saint Paul Street Site, and allows for other site features on the base map to be visible to the reader for reference. Figure 1B also shows the location and orientation of the surveys with the locations of site utilities visible for reference. The electrode spacing and resulting survey line length and imaging depth at the 690 Saint Paul Street Site are listed in Table 1.

The electrodes stakes were connected via geophysical cables and the cables were connected to Aestus' data acquisition field instruments. Electrical resistivity data from the subsurface was then collected as described below in the Data Collection section of this report.

Topography estimations of Aestus survey line locations were performed by Aestus personnel using land survey instrument (i.e., Topcon total station unit with prism). These data were used to assist Aestus in locating our surveys in plan view on the site base map/aerial photo and performing a topographic correction to our survey images as discussed below in the Data Processing section of this report.

For survey ROC-04, Aestus used rebar rods with yellow caps that have the inscription 'GEOTRAX SURVEY' to denote the endpoints. For the other surveys at the site, Aestus drove steel nails with brass survey markers into the ground to denote the start and end points of interest along each survey line. A metal detector may be used to locate each GeoTrax Survey™ line should additional confirmation borings be advanced along one or more survey lines in the future. A picture of the brass survey end point marker with a survey nail and the rebar caps are shown below:

© 2010 Aestus, LLC

Rebar Cap End Point Markers

Brass Survey End Point Marker

More accurate coordinates for the endpoints (i.e., Electrode Nos. 1 and 56) of each survey line at the site were collected by LaBella personnel using land survey techniques and are included in Table 2 for reference. Coordinates are provided in New York State Plane West (NYSP West).

Aestus also recorded detailed field notes that show a sketch of each survey and surrounding site features (e.g., utility locations, buildings, monitoring wells, etc.) and the distance of these site features from our survey lines. A copy of Aestus' field notes is provided for reference in Appendix A to this report and for assistance with locating survey lines in the field during any follow-up confirmation drilling work that may be conducted.

2.2 Data Collection

Once each survey line was laid out in the field, Aestus' specialized field instruments gathered a significant amount of data related to the electrical properties of the subsurface. Aestus used our proprietary techniques to collect significantly more data, and of higher quality, than other firms using similar equipment.

These data were checked for quality and integrity and then partially processed in the field to obtain a high resolution draft subsurface image viewable by LaBella and Aestus personnel. Full data reduction and processing is performed in Aestus' offices as discussed in the following section.

© 2010 Aestus, LLC

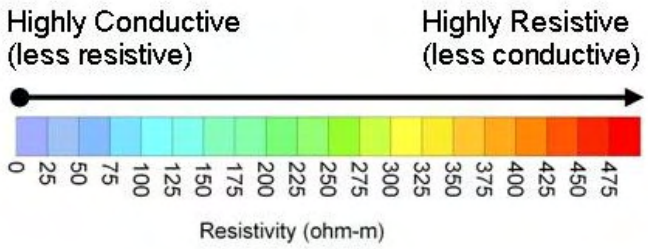
3.0 DATA PROCESSING AND INTERPRETATION PROCESS

Following field data collection, Aestus used our proprietary data post-processing techniques to develop a final electrical resistivity image of the subsurface for each survey. This section describes the data processing and interpretation process.

3.1 Data Processing

The raw data files collected in the field were post processed, including a more thorough review of data quality and integrity. Data points not meeting Aestus' established statistical error criteria were removed from the data set so that the resulting survey image is not skewed. A final image for each survey was developed which contains a model of the electrical resistivity of the subsurface in units of ohm-meters. Changes in topography along the survey lines were accounted for during this data processing work.

The final images were developed by contouring and plotting the resistivity data for each survey line using consistent color contouring schemes for 690 Saint Paul Street Site survey data to allow for evaluation of the results of all surveys on a comparative basis. In the case of the generic color contouring scheme example below (i.e., not specific to the 690 Saint Paul Street Site), the electrically conductive areas of the subsurface are illustrated by purple and blue colors and the electrically resistive areas of the subsurface are illustrated by yellow, orange, and red colors.



As part of our overall data quality control process, Aestus compiles resistivity data for an entire site and then normalizes the color contouring scheme for all of the images across the site. This allows consistency in the color contouring scheme so a reviewer can correlate the results from one survey to the results from another survey performed on the same site during the same timeframe. The site specific resistivity color contouring schemes developed for the 690 Saint Paul Street Site are discussed in the data interpretation sections below.

3.2 Summary of Data Interpretation Process

The magnitude of subsurface resistivity values will vary from site to site based on a number of factors, and is related to geologic composition, the chemistry of the groundwater and/or other fluids trapped in the pore spaces within the soil matrix and/or bedrock fractures, and the presence or absence of buried debris or subsurface structures. For a typical site, fine materials such as clay and silt are generally less resistive (i.e., more conductive) while coarse sand and gravel are generally more resistive (i.e., less conductive). Should the soil (clay or sand) be dry, it will appear more resistive when dry and less resistive when wet. Should a distinct water table exist in the area being surveyed, the groundwater interface is

© 2010 Aestus, LLC

often not seen in the survey images because the resistivity of the groundwater is often times similar to the resistivity of the soil matrix.

Additionally, the presence of contaminants within the pore matrix can overshadow (electrically) the presence of groundwater or the degree of saturation. The presence of fractures in bedrock geology often appear as a vertically oriented anomaly and may be either conductive or resistive depending on what type of fluid (e.g., clean groundwater and/or unweathered/weathered chemical constituents) is present within the fracture. Soil/bedrock interfaces are sometimes identifiable depending on the degree of weathering at the transition to bedrock, the degree of saturation, and the presence or absence of contamination.

Should buried tanks or other man-made structures be present coincident with survey line locations, they typically show up in our survey images as either low resistivity/highly conductive (metallic construction) or high resistivity/low conductivity (fiberglass, concrete or other construction). In areas where tanks or sumps have been removed or replaced, these areas may or may not be present in our images as an anomaly depending on whether native or non-native fill soils were used as backfill. If contamination is present underneath former tanks and sump areas, it generally appears on our images as described in the following paragraphs.

Subsurface areas impacted with fresh or unweathered light or dense non-aqueous liquids (LNAPLs or DNAPLs, respectively) and related dissolved phase constituents, typically appear as more resistive anomalous zones relative to areas that contain only non-impacted soils and/or pore fluids. Based on our experience, areas containing NAPL-impacted soils often appear as a roughly spherical or lenticular blob shape (obloid) and will typically be identified in our survey images by more resistive values.

Sometimes, the presence of this type of contamination can cause a less resistive (i.e., very conductive) anomaly or zone, particularly with weathered LNAPL-related contamination. Aestus believes the reason that weathered LNAPL shows as conductive in our images is naturally occurring bioactivity in the subsurface in contaminated zones that alters the electrical properties of these materials. This phenomenon is well documented in technical literature related to the study of LNAPLs in particular (see example technical paper included as Appendix B) and Aestus' clients have drilled and often confirmed the presence of LNAPL within electrically conductive anomalies.

The mechanism that apparently causes DNAPL-related contamination (e.g., chlorinated solvents) to show as electrically conductive in our survey images is less clear and research conclusions less definitive at the time of this report. However, Appendix C contains a technical paper that discusses byproducts of in-situ chlorinated solvent biodegradation containing chloride amongst other compounds (see page 9 of Appendix C). Aestus theorizes that the presence of chloride and/or other ions in zones of natural attenuation would likely create a very electrically conductive signature detectable by our GeoTrax Survey™ technology in many cases.

GeoTrax Surveys™ normally can identify areas impacted by dissolved concentration impacts to the groundwater from a former or existing source of contamination. Sometimes dissolved phase impacts do not appear as anomalies because lower concentrations of dissolved phase contamination cause relatively small changes in electrical properties of the

© 2010 Aestus, LLC

subsurface and have the potential to be masked by changes in resistivity signatures of various soil types that may exist across a typical site. Often times with lower dissolved phase concentrations, Aestus believes that we may be detecting where groundwater is flowing preferentially (and contamination is moving with the groundwater) such that we can locate more contaminated zones in the subsurface. This occurs for example in karstic fractured geologic environments.

As discussed during the proposal phase of this project, Aestus' survey results do not immediately identify the composition of anomalies which may be caused by variations in geology and/or moisture content (or other factors) in addition to the presence of subsurface contamination. Final data interpretation is greatly enhanced by calibrating or benchmarking the GeoTrax Survey™ electrical resistivity images against existing site data and/or follow-up confirmation boring/monitoring well data. This process lends much greater understanding of the subsurface and the survey images. Ideally, confirmation work is performed as soon as possible following the survey work such that minimal time is allowed for potential contaminant migration that may cause changed conditions in the surveyed areas.

The results of Aestus' survey work and our specific interpretations/conclusions based on our work at the 690 Saint Paul Street Site are discussed in the following sections of this report.

© 2010 Aestus, LLC

4.0 RESULTS AND DATA INTERPRETATION

This section summarizes the results of Aestus' field data collection work and discusses interpretation of the 690 Saint Paul Street Site geophysical data.

4.1 Results

Aestus' geophysical survey work yielded high quality/high resolution two-dimensional (2-D) electrical resistivity images of the subsurface at the 690 Saint Paul Street Site in select locations as shown on Figure 1A. The final GeoTrax Survey™ images (see Figures 2 through 7) are presented in one custom (site specific) color contouring scheme and will be discussed below in Section 4.2 (Data Interpretation) of this report.

As part of the field survey work, Aestus photographed each survey location during data collection and along each survey alignment from different vantage points. Select photographs are included in Figures 12 through 14 this report. The entire set of photographs taken by Aestus is included as an electronic appendix to this report (see the CD-ROM included on the inside cover of the hardcopy version of this report).

To assist ourselves and LaBella personnel with visualizing the GeoTrax Survey™ subsurface images as they relate to one another, Aestus used data collected from our 2-D imaging process to generate a 3-D representation of these data in the subsurface of the 690 Saint Paul Street Site. We and our clients typically find that the results of the 3-D visualization work are very helpful in providing a more complete and somewhat simplified understanding of the survey data/images, and in providing a better understanding of subsurface conditions at a given site. The 3-D visualizations are also very useful in explaining site conceptual models and features to both technical and non-technical stakeholders involved in the project.

To allow viewing of our survey images to scale in 3-D space, Aestus developed a technique to import and properly position and scale the survey images in 3-D drawing space and relative to the site base map using Rockworks™ 3-D visualization software. Although the perspective 3-D views resulting from these efforts are based on 2-D data sets (i.e., the data was not collected in 3-D during the survey work), Aestus has a higher confidence in our approach relative to the conventional approach of using 1-D monitoring well data points only and the resulting interpolations between these discrete points. For Aestus' 3-D visualization work, thousands of field data points (collected in 2-D) were used as input to develop the 2-D and 3-D perspective views.

A few representative isometric perspective views of the survey images representing the subsurface of the 690 Saint Paul Street Site are provided as shown in Figures 8 through 11. Because the 3-D visualization work performed by Aestus was extensive and many different views of these data can be generated using this tool, it is not practical to provide all of these views as part of the hardcopy report. However, Aestus is providing a copy of our 3-D model files for viewing by LaBella personnel using a free viewer provided by Rockworks™. This data and instructions on downloading and using the free viewer software are contained on the CD-ROM enclosed with the hardcopy of this report.

© 2010 Aestus, LLC

Aestus is confident that this 3-D visualization work will assist LaBella with enhanced understanding of the location and extent of anomalous areas at the 690 Saint Paul Street Site, and to better communicate these issues to other project stakeholders.

4.2 Data Interpretation for the 690 Saint Paul Street Site

The following paragraphs discuss Aestus' interpretations of our survey data/images relative to the 690 Saint Paul Street Site issues and conceptual model. These interpretations are based on information available as of the date of this report and applying Aestus' professional judgment based on experience imaging other similar project sites.

4.2.1 Use of Common Earth Model Approach

From Aestus' perspective, the end goal of any environmental site characterization is to use all available data collected at a site to help visualize the earth's subsurface in 3-D, facilitate a better understanding of where sources of contamination may exist, and to help identify where and how contamination may be migrating. This process is most useful if the end result provides a conceptual site model that is more objective (i.e., and therefore less subjective), based on multiple data sets, and relatively easy to understand by different project stakeholders. To this end, Aestus has adapted an approach developed by the Canadian mining industry called the "Common Earth Model" defined as the following by McGuaghey, J. (2006):

> *"An explicit, quantitative model of the earth consistent with all data, testable by drilling, and subject to editing and refinement as the collection of new data proceeds. As a quantitative distillation of everything our data have to tell us about the earth, a common earth model is a requirement for maximizing the value we obtain from our large investment in data collection."*

Our adaptation of this approach for use in the environmental industry is effectively to get all available and geospatially relevant data into one place so that it can be viewed together rather than in separate pieces. For the 690 Saint Paul Street Site, this included assembling Aestus' geophysical data, monitoring well data, soil boring data (including PID data), indoor air quality data, utility line data, UST location data, etc. and posting these data onto our 2-D GeoTrax Survey™ images and also including as much of this information as practical into our 3-D visualization software. Aestus uses Rockworks™ as our standard approach for 3-D visualization and sometimes uses Earthvision® for development of a solid 3-D model; if data density warrants this approach and our clients' budgets support it.

As a corollary to the above definition of Common Earth Model, it is important to note that organizations using this approach have learned not to arbitrarily discard one or more particular data sets when these data do not appear to agree to other data sets. This happens frequently in the environmental industry when multiple consulting firms work on a particular site over a period of years or decades and were not directly involved in the collection of each data set. Seasoned Common Earth Model users have learned empirically to investigate further when two or more data sets do not agree at a specific location at a site. The probability is high that such further investigation will result in gaining useful knowledge about the site.

© 2010 Aestus, LLC

4.2.2 Historical Site Data Posting

The first step in Aestus' interpretation process was to generate a Common Earth Model for the 690 Saint Paul Street Site which facilitated calibration of our GeoTrax Survey™ electrical resistivity data/images against known conditions at discrete points (e.g., monitoring wells), where possible. Aestus reviewed available 690 Saint Paul Street Site data provided by LaBella, and determined that some monitoring well and soil boring data exists near Aestus' survey locations at the 690 Saint Paul Street Site. Such data was used for correlating the resistivity ranges detected by the GeoTrax Surveys™ to the site geology, groundwater quality, presence of contamination, etc. Specifically, Aestus posted existing nearby monitoring well locations and site characterization data onto the survey images (see Figures 2 through 7). By superimposing all of these data sets together graphically on each survey image, the reader can better understand the character and makeup of the subsurface. The data posted includes:

- ✓ Location, depth, and screened intervals of existing monitoring wells, if known (data provided by LaBella)
- ✓ Fluid level measurement data (provided by LaBella)
- ✓ Soil sample data (provided by LaBella)
- ✓ Groundwater quality data (provided by LaBella)
- ✓ Test pit data (provided by LaBella)
- ✓ 690 Saint Paul Street Site features (e.g. buildings, utilities, former UST locations, etc.)

It should be noted that the monitoring well locations posted in our 3-D model are based on land survey data collected by LaBella.

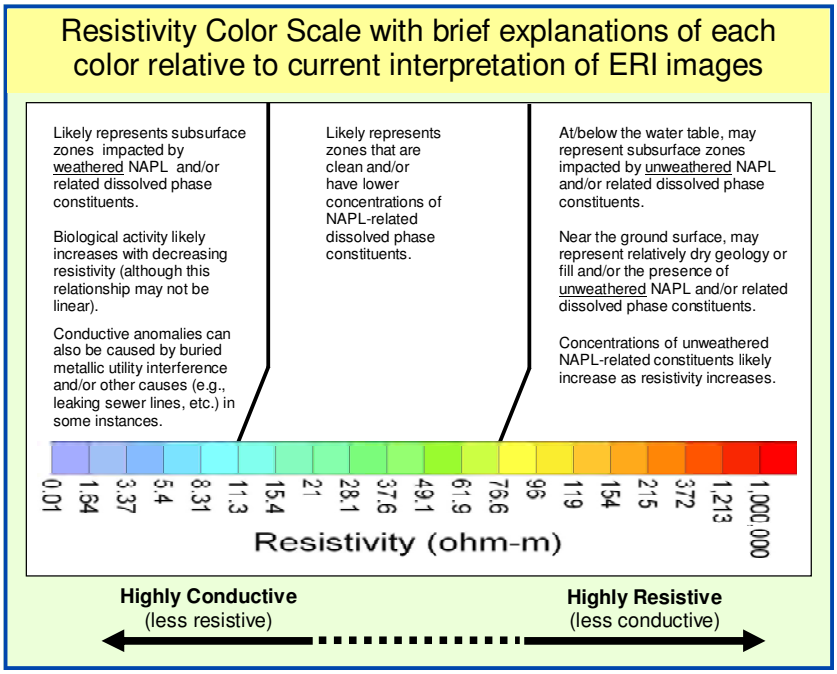
4.2.3 Develop Color Contouring Scheme for Resistivity Data

Upon completion of the data processing work discussed in Section 3.1 of this report, the resistivity data set was fixed and was not modified from that point forward. However, Aestus did modify the color contouring scheme used to effectively contour these data (i.e., show various ranges of resistivities detected at the site using different colors) to allow us and our clients to better understand what the data means. The color modification process is similar to re-contouring a topographic map (i.e., the elevation points never change, but the color contour interval is altered to produce different maps highlighting various features or range of resistivities).

Upon posting of all available confirmation boring and nearby monitoring well data to our survey images and comparing these data to our survey data visualized in multiple color contouring schemes, a relatively clear and consistent trend was evident for the 690 Saint Paul Street Site data. Aestus developed one custom color contouring scheme which correlated as follows with the majority of the Common Earth Model data and highlights both electrically conductive and resistive anomalous zones (shown graphically below and also contained in the Figures section of this report):

© 2010 Aestus, LLC

Custom (Site Specific) Color Contouring Scheme



As shown in the custom color contouring scheme resistivity scale above (see larger version of this resistivity scale on Figure LS-2 in the Legend and Symbols section of the Figures accompanying this report), Aestus interprets the more resistive areas (yellow, orange and red zones) in the images to be representative of the presence of anomalies that are likely consistent with the presence of unweathered hydrocarbon and/or chlorinated solvent related constituents, particularly those at/below the water table. The concentration of unweathered hydrocarbon and/or chlorinated solvent related constituents likely increases as the resistivity increases. Resistive anomalies may also be caused by variability in geology (e.g., grain size) and/or moisture content, particularly near the ground surface.

Mid-range areas (green and blue-green zones) appear to represent background geology with little or no hydrocarbon and/or chlorinated solvent related contamination present.

The less resistive (i.e., highly conductive purple and blue zones) areas most likely represent zones that have been impacted by weathered hydrocarbon and/or chlorinated solvent related constituents. Metallic objects/pipes present can also cause highly conductive anomalies. If present, the concentration of hydrocarbon and/or chlorinated solvent related constituents likely increases as the resistivity decreases. However, this relationship may not be linear due to the effects of biological activity and/or dechloronization in the subsurface (see discussion in technical papers contained in Appendices B and C, respectively).

General and specific interpretations and related references to examples in the data set are provided in the following section of this report.

© 2010 Aestus, LLC

5.0 CONCLUSIONS

In summary, Aestus believes that our GeoTrax Survey™ technology worked very well at the 690 Saint Paul Street Site to achieve the project objectives at this stage in the project, which include locating subsurface anomalies that may require focused additional investigation via direct sampling, and assisting LaBella with identifying the extent and potential flowpaths of hydrocarbon and chlorinated solvent related constituents.

Aestus offers the below conclusions as a result of reviewing our Common Earth Model data set including 2-D survey images (with historical drilling investigation data posted) and 3-D perspective views of the combined data set generated using Rockworks™ 3-D modeling software. These conclusions are subject to revision based on any follow up drilling/sampling data from anomalous locations detected by Aestus. As with all environmental assessments, these conclusions are reached with a certain acceptable degree of uncertainty, due to the possibility that relevant subsurface conditions may exist beyond the scope of this geophysical investigation.

5.1 General Conclusions

Aestus offers the following general conclusions regarding the combined data sets (i.e., geophysical and historical drilling/sampling data). More specific conclusions for each image are discussed in Section 5.2 and are shown graphically on Figures 2 through 7.

- ✓ Aestus detected both electrically conductive (i.e., low resistivity) and electrically resistive (i.e., high resistivity) anomalies within the subsurface at the 690 Saint Paul Street Site. The presence of both electrically resistive anomalies (typically representative of unweathered hydrocarbon and/or chlorinated solvent related constituents) and electrically conductive anomalies (often representative of weathered hydrocarbon and/or chlorinated solvent related constituents) suggests releases may potentially have been occurring over time. It should also be noted that such anomalies could be representative of geologic features, underground utilities, leakage from underground utilities (e.g., sewage) or subsurface structures.
- ✓ Most of the resistive anomalies identified at the site are located to the Northeast of Building 14B near the area where remedial excavation has been completed and a playground now exists (see green dashed circle on Figure 8). Logs from several of the test pits in the shallow subsurface of this area show elevated PID readings which may indicate that some impacts persist despite remedial efforts (see test pits 2 and 5 on Image ROC-04, Figure 5). Starting at about 15 feet BGS, image ROC-04 (Figure 5) shows resistive anomalies with higher resistivity values than anomalies in the shallow subsurface which may indicate residual source zones of hydrocarbon and/or chlorinated solvent related constituents.
- ✓ To the Northwest of Building 14B, parallel to St. Paul Street, surveys ROC-02 and ROC-03 (Figures 3 and 4, respectively) show areas that are consistently more electrically conductive than other areas surveyed at the site. These conductive areas may represent zones of saturated, weathered dolomite. However, the detected resistivity values in this area are typically 1 ohm-meter or less which is abnormally conductive and indicates the potential presence of weathered hydrocarbon and/or chlorinated solvent related constituents. It is also possible that

© 2010 Aestus, LLC

these anomalies are caused by sewage related contamination from nearby sanitary sewer lines which could have leaked.

- Images ROC-05 and ROC-06 (Figures 6 and 7, respectively), which ran through the hallway of Buildings 14 and 16A, show several electrically conductive and resistive anomalies.
- Figure 11 shows a modeled water table from data collected on January 29, 2009 along with the GeoTrax Surveys™ in 3D. Most of the highly resistive anomalies, which likely indicate unweathered hydrocarbon and/or chlorinated solvent related constituents, are below the water table. The resistive anomalies below the water table may reflect chlorinated solvent related constituents, or zones of competent dolomite. From what is known currently from available boring logs and test pits, the dolomite at the site is highly weathered which decreases the probability that the resistive anomalies represent only clean geology.

5.2 Specific Conclusions

Aestus offers the following specific conclusions regarding the combined data sets (i.e., geophysical and historical drilling/sampling data. Because the 690 Saint Paul Street Site and resulting survey images are complex, not all anomalous zones are discussed.

- ROC-01 (see Figure 2) has electrically resistive anomalies present in the general vicinity of existing monitoring well BW-4, which has previously indicated the presence of benzene and solvents dissolved in groundwater at concentrations above regulatory limits. Although this well is not located exactly coincident with our GeoTrax Survey™ line, these data could suggest a correlation between resistive anomalies and the presence of hydrocarbon and/or chlorinated solvent related constituents
- ROC-02 (see Figure 3) shows a large vertical resistive anomaly starting at about 100 feet laterally along the image. This anomaly is quite suspicious, and likely represents impact by hydrocarbon and/or chlorinated solvent related constituents. This anomaly corresponds with the location of a traffic utility junction box at ground surface. It is possible that contaminant migration through utility corridors is responsible for this anomaly.
- ROC-03 (see Figure 4) shows two resistive anomalies in close proximity to two manholes at the ground surface. These anomalies may be caused by construction of the manholes and/or may represent an area of potential preferential contaminant migration.
- On survey ROC-05 (see Figure 6) there is an extremely resistive scallop-shaped anomaly that appears between about 40 and 90 feet along the image. The resistivity value of this anomaly may be exaggerated due to the strong conductive zone located just above the resistive anomaly. It is possible that hydrocarbon and/or chlorinated solvent related constituents may be the primary cause of the conductive and/or resistive anomalies.

The following section of this report provides recommendations based on the aggregate data set and the above conclusions.

© 2010 Aestus, LLC

6.0 RECOMMENDATIONS

This section provides Aestus' recommendations moving forward, based on the results and conclusions developed from our work.

6.1 3-D Model Review

In order to fully understand the GeoTrax Survey™ data collected and visualize it in a robust manner in 3-D, Aestus recommends that the reader use the provided free 3-D model viewer to look at these areas more closely on-screen and from different perspectives as screen captures from the 3D model of the site (i.e. imported into Figures 8 through 11) do not provide as complete of an understanding of the available site data and the resolution of these hardcopy figures is lower than reviewing the model on a computer monitor screen.

6.2 Follow-up Confirmation Boring Program

Based on initial interpretations of the Common Earth Model data contained in this report, it appears to Aestus that this investigation may not have located the lateral extent of subsurface impacts at the 690 Saint Paul Street Site. Furthermore, it appears that contaminant distribution in the subsurface is likely complex at this site. Follow-up confirmatory soil borings and monitoring wells will help to refine the results of this study and determine whether some or all of the anomalies are caused by geologic conditions, presence of utilities, potential leakage from utilities, and/or the presence of hydrocarbon and/or chlorinated related impacts.

Therefore, Aestus recommends that LaBella perform (as appropriate) a focused confirmation drilling/sampling program to confirm the composition of the types of geophysical anomalies detected at various locations across the 690 Saint Paul Street Site. The power and economy of the GeoTrax Survey™ technology is further increased once the cause of various anomaly types is confirmed via such drilling/sampling. At that point extrapolated conclusions regarding other anomalous areas of the 690 Saint Paul Street Site can be made with a relatively high level of confidence without having to drill every single anomalous zone detected.

Ideally drilling confirmation borings should be performed as soon as possible so that potential changes in site conditions are minimized. Aestus recommends that these borings be completed as monitoring wells such that the presence/absence and levels of hydrocarbon and/or chlorinated solvent related constituents can be better quantified. Aestus has provided suggested confirmation boring locations as shown in plan view on Figure 1C and on the 2-D survey images in Figures 2 through 7. Specific locations of these proposed confirmation borings are summarized in Table 5. Careful attention should be paid to well screen interval selection as most of the wells on the site currently have submerged well screens which make confirmation of the presence of free-phase LNAPL more difficult.

It is critical that confirmation borings/wells be installed exactly on the alignment of our survey lines whenever possible so that drilling data can be directly correlated to geophysical data from a geospatial perspective. This is particularly important on complex sites such as the 690 Saint Paul Street Site where subsurface conditions likely change even within a few feet in some cases. To assist in properly locating confirmation drilling locations, Aestus has provided geospatial data relative to our survey line endpoint locations in Tables 3 and 4 and

© 2010 Aestus, LLC

our field notes contained in Appendix A. Select site photos in Figures 12 through 14 and the entire set of site photos (contained on CD-ROM included with hardcopy version of this report) can also be used to field locate confirmation borings.

6.3 Sampling Methodology and Analyte Selection

It is important in Aestus' experience that LaBella carefully consider sampling methodology and analyte selection during work plan development/modifications for confirmation drilling. Sampling methodology is critical to be able to effectively collect samples/measurements at the target anomaly depths identified by the geophysical work. Additionally, if analytes are selected to only screen for hydrocarbon and/or chlorinated solvent related constituents, then it is important to understand that the cause of anomalies detected may not be identified if for instance they are being caused by the presence of sewage, heavy metals, and/or other contamination.

Because Aestus' technology sees all subsurface features together and was never designed to be a quantitative analytical tool that can automatically screen for one compound or family of compounds, it may be prudent at sites such as the 690 Saint Paul Street Site to consider testing for a wider range of analytes to be able to develop a stronger conceptual site model using the collective geophysical and analytical data sets. It is also important to log geology/lithology during drilling such that we collectively better understand the effects of geology/hydrogeology on contaminant migration pathways at the 690 Saint Paul Street Site.

6.4 Updates to Common Earth Model and Aestus Involvement

As discussed in Section 4.2.1 the first part of the definition of the Common Earth Model is:

> *"An explicit, quantitative model of the earth consistent with all data, testable by drilling, and subject to editing and refinement as the collection of new data proceeds.*

Therefore, Aestus recommends that LaBella provide the results of confirmation drilling and other site investigation tasks to Aestus, so we can update our Common Earth Model components (i.e., 2-D images and 3-D model) and refine our interpretations as appropriate based on these results to further improve the conceptual site model and overall understanding of site issues in the subsurface.

Note:
Survey data collected on 9/25/09 , 9/28/09 & 9/29/09 at 690 St. Paul Street by LaBella personnel
using a Trimble S6 Total Station. BW's and MW's elevations were improved by collecting with Trimble Digital Level.
Elevation conversion was made using Corpscon software utilizing the coordinates of a central point of the project.

Table 5
Confirmation Boring Locations Suggested by Aestus, LLC[1]
for Calibration of GeoTrax SurveyTM ERI Data to Site Conditions
690 Saint Paul Street Site
Rochester, New York

Aestus, LLC's Suggested Prioritization of Borings	Confirmation Boring No.	GeoTrax Survey™ ID	Confirmation Boring Distance from Electrode No. 1 (feet)	Confirmation Boring Distance from Electrode No. 56 (feet)	Suggested Boring Depth (Screen Interval TBD in Field) (feet BGS) (See Figures 2B-7B)	Target Anomaly Type (See Figures 2B-7B)
9	CB/MW-1A	ROC-01	117.0	63.0	27	Resistive
5	CB/MW-1B	ROC-01	145.0	35.0	28	Highly Conductive
4	CB/MW-2A	ROC-02	109.0	71.0	23	Extremely Resistive
7	CB/MW-3A	ROC-03	25.0	155.0	11	Resistive
6	CB/MW-3B	ROC-03	121.0	59.0	29	Conductive/Resistive
3	CB/MW-4A	ROC-04	64.0	89.0	28	Highly Resistive
1	CB/MW-4B	ROC-04	124.0	29.0	28	Conductive/ Highly Resistive
8	CB/MW-5A	ROC-05	67.0	113.0	29	Extremely Conductive/Resistive
2	CB/MW-5B	ROC-05	115.0	65.0	29	Highly Resistive
11	CB/MW-6A	ROC-06	50.0	130.0	28	Highly Resistive
10	CB/MW-6B	ROC-06	87.0	93.0	24	Extremely Conductive

NOTES:

1. Aestus recommends the above confirmation boring locations selected to confirm composition and presence/absence of contamination in the various types of electrical anomalies encountered at the site.

2. Drilling Methodology: Aestus recommends the following for achieving overall project success:

- It is critical that confirmation borings be installed directly along the GeoTrax Survey™ alignment, particularly because some of targeted anomalies are very narrow.
- Continuous core sampling and detailed logging of cores noting soil type, moisture content, PID, etc.
- Use dual tube direct push techniques if soil conditions don't allow an open borehole to remain when using Macrocore techniques
- Completion of boreholes as monitoring wells if possible

3. Sample Analysis: Aestus recommends the following analytes to be included during sampling at a minimum:

- Collect pH/Conductivity/Temp of groundwater samples if possible
- Full VOC suite for groundwater and soil samples (if collected)
- Major Ions (groundwater)

Legend and Symbols

(for reference when reviewing all Figures)

Electrode 1 — Electrode 56

ROC-01

GeoTrax Survey™ Orientation and Designation (scale is approximate)

Indicates the location where an electric utility line crosses a GeoTrax Survey™ line.

BW-3

Indicates the depth and screen interval of site monitoring wells.

BW-4

Indicates the depth and screen interval of site monitoring wells that are too far away from a GeoTrax Survey™ for direct correlation.

CB/MW-1A

Indicates Aestus' suggested confirmation boring/monitoring well location and depth.

Indicates groundwater sample collected from well screen interval.

08/09

Indicates most recent groundwater level per site monitoring well data.

Indicates concrete

Indicates grass

Indicates the location of a chain link fence.

Indicates the location of a fire hydrant.

Ⓜ

Indicates the location of a manhole.

Indicates the location of a storm drain.

Indicates various site features which are labeled accordingly on the figures.

Indicates the approximate location of site Test Pits. Locations based on measurements from site base maps provided by LaBella.

Indicates the approximate location of site soil borings. Locations based on measurements from site base maps provided by LaBella.

In the 3D Figures, indicates the casing (black) and screen (yellow) of wells located onsite. Wells with unknown screen intervals area all black.

Soil Sample Results

Well		MW-4R		
Date		06/09		
Parameters (mg/Kg)		Sample Depth (feet)		
	Standard	3.5-4.5'	6-7'	9-10'
Head-space reading	N/A	10	0	0
Benzene	0.02	<0.05	NS	<0.05
Toluene	2.09	ND	NS	ND
Ethylbenzene	17.23	ND	NS	ND

Analytical data from soil sample from a well or soil boring located within 15 feet of a GeoTrax Survey™ line.
Standards used are the NYSDEC TAGM 4046 Soil Clean Up Objective to Protect Groundwater Quality Cf40.

GW Sample Results

Well		MW-14	
Parameters (µg/L)		Sample Date

Interpretive Electrical Resistivity Scale Explanation

(for reference when reviewing Figures 2 through 7)

Resistivity Color Scale with brief explanations of each color relative to current interpretation of ERI images

Likely represents subsurface zones impacted by weathered NAPL and/or related dissolved phase constituents.

Biological activity likely increases with decreasing resistivity (although this relationship may not be linear).

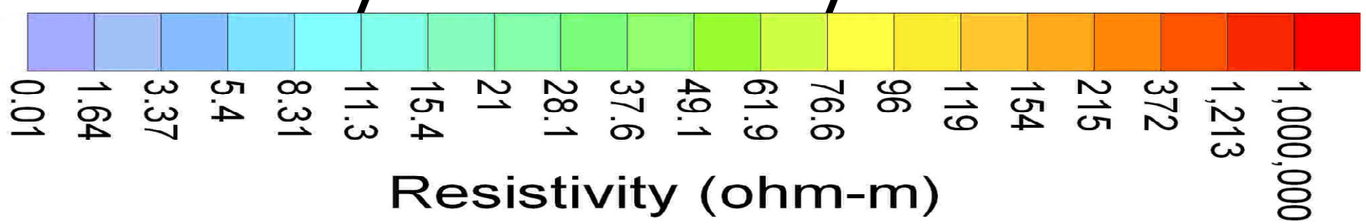
Conductive anomalies can also be caused by buried metallic utility interference and/or other causes (e.g., leaking sewer lines, etc.) in some instances.

Likely represents zones that are clean and/or have lower concentrations of NAPL-related dissolved phase constituents.

At/below the water table, may represent subsurface zones impacted by unweathered NAPL and/or related dissolved phase constituents.

Near the ground surface, may represent relatively dry geology or fill and/or the presence of unweathered NAPL and/or related dissolved phase constituents.

Concentrations of unweathered NAPL-related constituents likely increase as resistivity increases.



Highly Conductive (less resistive) ⟵ ⟶ **Highly Resistive** (less conductive)

The Effects of LNAPL Biodegradation Products on Electrical Conductivity Measurements

Aestus, LLC

The Effects of LNAPL Biodegradation Products on Electrical Conductivity Measurements

Daniel P Cassidy[1]. D. Dale Werkema. Jr.[1]. William Sauck[1], Estella Atekwana[2], Silvia Rossbach[3] and Joe Duris
[1]Western Michigan University. Department of Geosciences, Kalamazoo. Mich. 49008. U.S.A.

[3]Western Michigan University. Department of Biological Sciences, Kalamazoo, Mich. 49008. C.S.A.

ABSTRACT

Field geophysical Studies have identified anomalously high conductivities in and below the free product Tone at many sites with aged contamination by light. non-aqueous phase liquid\ (LNAPL). Laboratory experiments were conducted to test the hypotheses that these anomalously high conductivities can result from products of LNAPL biodegradation. Soil from a hydrocarbon-impacted site with anomalously high conductivities was washed repeatedly IO remove soluble constituents, re-contaminated with diesel fuel (DF), and the port\ tilled with water to simulate a saturated smear Tone. Nutrients were provided at level? observed at the site. which resulted in anaerobic conditions due to DF biodegradation. Within 121) days. the increase in specific conductivity from microbial activity was 2, 100 μS/cm. caused by an increase in total dissolved solids (DS) of over 1,700 *mg/L*. The increase in DS was due to mineral (mostly carbonate) dissolution and to the production of organic acids and biosurfactants. Under aerobic conditions (i.e., without added nutrients) products of DF biodegradation increased the total DS and conductivity by 340 mg/L and 440 μS/cm. respectively. The results show that products of LNAPL biodegradation can drastically increase the conductivity at impacted sites.

Introduction

The collection. preparation. and analysis of ground water samples at contaminated sites constitute a major portion of the total cost for remediation (Granato and Smith, 1999) Geophysical surveys using resistivity and ground penetrating radar (GPR) are convenient, non-invasive tools 10 detect and map subsurface contamination with light, nonaqueous phase liquid\ (LNAPL). Recent reports suggest that LNAPL biodegradation can change biogeochemical properties sufficiently to have a significant impact on resistively and GPR measurements (Sauck, 2000, Werkema *et al.* 2000: Atekwana *et al.* 1998, 1999). If the geophysical responses caused by these Microbially-induced changes in pore water biogeochemistry can be better understood geophysical measurements could possibly be used to monitor contaminants and their breakdown products in the subsurface. This could allow resistivity techniques to be used as a surrogate or ground-water sampling and analysis to achieve lower cleanup costs.

Typical products of LNAPL biodegradation ale acids and biosurfactants. Carbonic and organic acids are produced during LNAPL biodegradation (Cozzarelli *et al.* 1990, 1994 1995; Eaganhouse *et al.* 1993; Hiebert *et al.* 1995: Baedecker *et al.* 1993; McMahon *et al.* 1995). These products increase conductivity directly by increasing the dissolved solids (DS) concentration, and indirectly by promoting mineral dissolution (Hiebert *et al.* 1995; McMahon *et al.* 1995). High DS concentrations in LNAPL-impacted zones have been invoked to explain anomalously low bulk electrical resistivity (Sauck *et al.* 1998; Bermejo *et al.* 1997). However. it has not yet been shown that temporal changes in geoelectrical properties of pore water occur due to LNAPL biodegradation.

Biosurfactants are produced by many genera of soil micro-organisms during growth on NAPL (Alexander. 1994; Miller. 1995: Desai and Banat. 1997). When present at concentration above the critical micelle concentration (CMC). Surfactants product microemulsions of NAPL m water. Biosurfactant are produced by aerobic and anaerobic microorganisms (Desai and Banat. 1997: Cooper *et al.* 1980; Mclnerney *et al.* 1990). Biosurfactants increase DS concentrations. Perhaps more importantly. emulsion of NAPL resulting from biosurfactants could promote a change in conditions from LNAPL-wetted to water-wetted. This can increase the contact area between water and solids. providing more nutrients and promoting further biogeochemical changes. Hence, biosurfactant production he> the potential to impact both resistivity and GPR measurements tremendously. While biosurfactants have been linked with NAPL biodegradation in mixed soil reactors (Cassidy, in press). in situ biosurfactant production and NAPL emulsification have not been demonstrated.

The efficacy of resistivity surveys rests in a high electrical resistivity of LNAPL relative to subsurface materials. This "insulating layer" model has been verified in short-term laboratory and controlled spill experiments (Schneider and Greenhouse. 1992). However, investigations at numer-

ous sites with aged contamination show that the LNAPL smear zone has a lower resistivity (higher conductivity) than the bulk formation (Atekwana *et al.*, 1998, 1999; Benson and Stubben, 1995; Gajdos and Kral, 1995; Sauck. 1998). It has been hypothesized that anomalously low apparent resistivities are the result of LNAPL biodegradation (Atekwana *et al.* 1999: Sauck, 2000). However, to confirm this hypothesis changes in geoelectrical properties must be co! related with biodegradation products over time. This paper describes laboratory experiments designed to correlate temporal changes in the concentrations of diesel fuel (DF) degradation products with changes in specific electrical conductivity. under aerobic and anaerobic conditions. The production of biosurfactants and the resulting emulsification of DF were also monitored.

Materials and Methods

The soil was obtained from a hydrocarbon-impacted site described by Atekwana *et al.*. (1999) and Werkema *et al.*. (2000). The contaminated soil was washed five times with deionized water to remove soluble constituents. Fresh, no. 2 diesel fuel (DF) was mixed into the soil. The reactor-x consisted of 20-L plastic vessels. Approximately 18 L of soil was packed into each reactor, and deionized water was added to bring the water level up to the surface of the soil. A visible NAPL layer was present after adding water. The reactor setup was designed to simulate conditions in the saturated smear zone. A slotted, fully-penetrating PVC tube allowed composite pore water samples to be drawn and probes to be inserted into the saturated zone.

Duplicate reactors of three types were maintained for 120 days; one with added nutrients, one without added nutrients. and one "killed" (autoclaved) control without nutrients. Nutrients (4 mg/L NO_3-$N_{,4}$ mg/L $NH_{,}$-N. and I mg/L $PO_{,}$-P) were added to the reactors with the deionized fill water. These nutrient concentrations arc similar- to those observed at the site. Addition of nutrients resulted in anaerobic conditions within 10 days. The reactor with added nutrients was labeled "anaerobic." Anaerobic conditions also predominate at the bite. The reactor without added nutrients maintained aerobic conditions and was labeled "aerobic."

Dissolved oxygen (DO), pH. and conductivity were measured in situ. Pore water samples were drawn to quantify volatile organic acids (VOA), aqueous DF concentration. surface tension (ST), biosurfactant concentration, and C^{2-} concentrations. The samples were first passed through a 0.45-μm Whatman filter paper to remove suspended solids and non-emulsified DE Emulsified DF passes through this filter and is measured as aqueous DE Volatile organic acids (VOA) and Ca^{2-} concentrations were quantified with *Standard Methods* 5560-B and 35000 D. respectively (Eaton *et al*. 1995). ST and concentrations of aqueous DF and biosurfactants. were measured according to Cassidy (in press). Biosurfactant concentration was measured using critical micelle dilution, which provides units of "times the critical micelle concentration" (x CMC). Dissolved solids (DS) were measured on filtrate at the end of I20 days. Total. inorganic. and organic DS were measured using Standard Methods 2540-B & C (Eaton *et al.*, 1995). The concentration of DF-degrading microbes was quantified as described by Werkema *et al.* [2000].

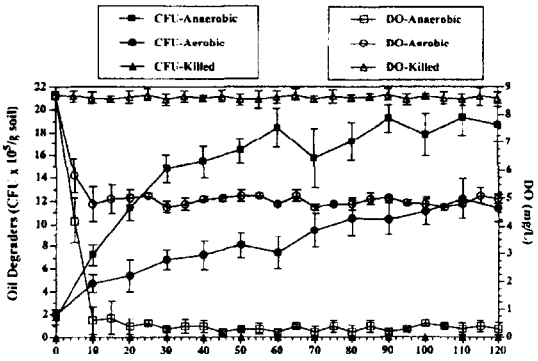

Figure 1. Average concentrations of oil degrading mi croorganisms and DO with time.

Results and Discussion

Figure 1 shows the average measurements of oil-degrading microorganisms and DO with time. The killed controls showed no decrease in DO from the saturation concentration of 8.5 mg/L throughout the entire experiment. The killed reactors also had microbial concentrations that were essentially zero throughout the experiment. This shows that autoclaving was successful ill killing the micro organisms. In contrast, the biologically active reactors showed significant increases in microbial concentrations and decreases in DO within the first 5 to 10 days. These results show that there was considerable aerobic microbial activity in the biologically active systems. It can be concluded that this microbial activity was driven by DF biodegradation, since DF was the only major food source available. The greatest increase in CFU and decrease in DO was observed in the anaerobic systems, because adding nutrients promoted more biological activity than was possible in the aerobic systems. The anaerobic reactors showed an increase in the number of oil-degrading microbes from roughly 2 $X10^5$ CFU/g to 1.9 X 10^6 CFU/g after 120 days. This represents an increase of nearly an order of magnitude. DO in the anaerobic reactors decreased to less than 0.5 mg/ L within 10 days, and remained at this concentration thereafter. The aerobic reactors showed an increase in the number of oil degrades from roughly 2 x 10^5 CFU/g to

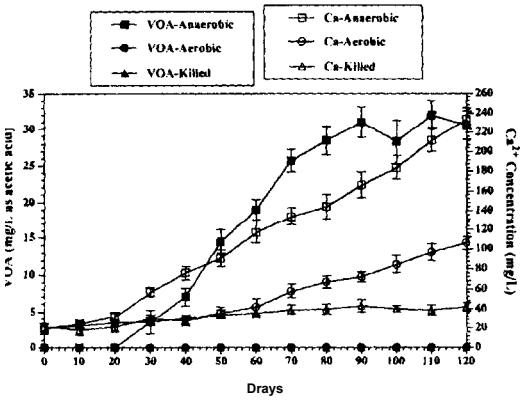

Figure 2. Average concentrations of VOA and Ca^{2+} with time.

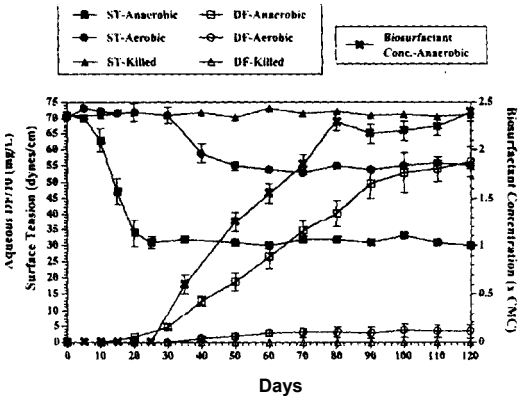

Figure 3. Average values of surface tension, aqueous DF concentration, and biosurfactant concentration with time.

to 1.3 X 106 CFU/g during the experiment. The DO in the reactors without added nutrients reached a steady state concentration of approximately 5 mg/L, which is considered aerobic.

The anaerobic reactors were designed to simulate conditions observed in the subsurface at the hydrocarbon impacted site from whence the soil was obtained (Werkema *et al.*, 2000) and at many such sites. Nutrients were provided at concentrations observed at the site, where the presence of sufficient nutrients and hydrocarbons have resulted in anaerobic conditions *(i.e.*. DO < 0.5 mg/L) caused by microbial activity (Werkema PI al., 2000). Anaerobic conditions exist in the saturated zone at nearly all LNAPL impacted site& (Alexander, 1994). Nitrate (NO^{3-}), which is present at the site and was added to the anaerobic systems. promotes the growth of denitrifying bacteria that degrade DF by providing a necessary electron acceptor. It is important to remember that aerobic reactions occur in anaerobic systems along with anaerobic reactions. which is what continually consumes oxygen and maintains anaerobic conditions. Therefore, both aerobic and anaerobic reactions took place in the anaerobic systems. The aerobic reactors were maintained as a control to observe the effects of nutrients at the site on biogeochemistry and conductivity. and to simulate a nutrient-starved, aerobic site. Killed reactors provided an abiotic system for comparison with the biologically active reactors.

The average values for measurements of VOA and Ca^{2+} concentrations are plotted in Fig. 2. VOA levels were zero throughout the experiment in the killed and aerobic systems. However, VOA concentrations in the anaerobic systems began to increase on day 20 and stabilized at values between 30-35 mg/L as acetic acid between days 90 and 120. Since VOAs are biodegradable, an accumulation of VOA indicates that rates of production exceed rates of degradation during that time. Concentrations of Ca" started at a background value of approximately 25 mg/L and increased with time in all the reactors. Increases in Ca" concentrations with time were probably to due to dissolution of carbonates, which comprised approximately 2% (by weight) of the soil. The lowest levels of Ca^{2+} at the end of the experiment (40 mg/L) were observed in the killed reactors, which represent\ Ca^{2+} concentrations achieved by carbonate dissolution in the absence of microbial activity. In contrast. the Ca^{2+} concentration in the aerobic and anaerobic systems reached levels of 105 mg/L and 235 mg/ L, respectively.

The results in Fig. 2 show that microbial activity promoted the dissolution of carbonates, most pronounced under anaerobic conditions. The greater dissolution of carbonates achieved in the anaerobic systems is consistent with the accumulation of VOA and the overall enhanced microbial activity in these reactors compared with the aerobic reactors. While VOA was not detected in the aerobic reactors, it may have been present in low levels. CO_2 is another common product of microbial activity (not measured in this study), and its production is proportional to overall microbial activity (aerobic and anaerobic). Considering that more microbial activity was observed in the anaerobic systems than the aerobic ones, and that both aerobic and anaerobic reactions took place in the anaerobic systems, it is likely that more CO_2 was produced in the anaerobic systems than the aerobic ones. CO_2 and organic acid production has been demonstrated at LNAPL-impacted sites (Cozzarelli *et al.* 1990, 1994, 1995; Eaganhouse *et al.*, 1993; Hiebert *et al.* 1995: Baedecker *et al.* 1993; McMahon *et al.* 1995) and is known co enhance the dissolution of carbonate\ and other minerals.

Figure 3 shows the average values of biosurfactant

related measurements: ST and concentrations of aqueous DF and biosurfactants. Killed controls showed no significant decrease in surface tension from 72 dynes/cm (the value for distilled water al 25 C) throughout the entire experiment. In contrast. ST measurements in the anaerobic reactors decreased from 72 dynes/cm to approximately 30 dynes/cm after 20 days. and remained al these levels until the end of the experiment. ST in the aerobic systems decreased after day 30 IO values between SO and 55 dynes/ cm, where they remained for the remainder of the experiment. Aqueous DF concentrations were zero for the first 20-X) days in all the reactors, and remained zero throughout the experiment in the killed reactors. The aqueous concentration of DF is roughly 5 mg/L (Testa and Winegardner, 1991). hut DF sorbs readily to soil, which explains the initial absence of DF in the aqueous phase. Aqueous DF concentration\ in the aerobic systems increased after day 30 to final values of nearly 5 mg/L. Aqueous DF concentrations in the anaerobic systems increased dramatically after day 20. reaching values of 550 mg/L (over 100 times the aqueous solubility). Biosurfactant concentrations in the killed and aerobic systems (not shown) were below the CMC throughout the experiment. However, biosurfactant concentrations in the anaerobic reactors increased after day 20 to levels over 2 times the CMC during the last 40 days of the experiments.

The results in Fig. 3 show that biosurfactants were produced in the anaerobic systems to levels over twice the CMC. The drop in ST to 30 dynes/cm observed in the anaerobic reactors coincided with biosurfactant concentrations above the CMC. and is a clear indication of surfactant concentrations above the CMC (Zajic and Seffens, 1984; Desai and Banat. 1907). Common metabolic products (e.g., organic acids) are not able to reduce ST to 30 dynes/cm. even at concentrations above 10% (Zajic and Seffens. 1984). indicating that the low ST reached in the anaerobic systems was not due to the accumulation of such products. Another unmistakable sign of biosurfactant concentration observed in the anaerobic systems was the increase in aqueous; DF concentrations coinciding with increasing biosurfactant concentrations after day 20. Aqueous DF measurements two orders of magnitude greater than the solubility limit is explained by emulsification of DE Emulsified NAPL droplets are le\s than 0.1 +m in diameter (Miller, 1995). and can pass through the 0.4%-μm filter, whereas non-emulsified NAPL cannot. Biosurfactant are biodegradable and sorb readily to soil (Miller, 1995: Desai and Banat. 1997). so the accumulation of biosurfactants in the anaerobic systems indicates that the rate of production exceeded rates of biodegradation and sorption. While biosurfactant concentrations above the CMC were not measured in the aerobic systems. ST values decreased and aqueous DF concentrations increased noticeably. This suggests that biosurfactants may have been in excess of the CMC in some pores. but that the concentrations dropped to below the CMC by dilution during sampling. Increasing aqueous DF concentrations with time in the aerobic systems support this. Numerous aerobic and anaerobic species produce biosurfactants (Zajic and Seffens, 1984: Desai and Banat, 1997). However. this study is the first to demonstrate in situ biosurfactant production accompanying microbial growth on NAPL.

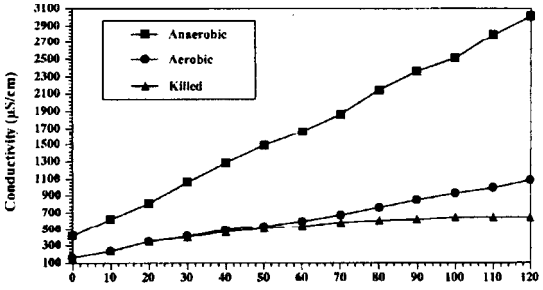

Figure 4. Average values of specific electrical conductivity with time.

Figure 4 shows the average values of specific conductivity measurements in pore water r:Imple\ over time. Conductivity increased in all reactors, hut the increase was by far the greatest in anaerobic systems. The initial conductivity of the anaerobic systems began at approximately 420 μS/cm. which was considerably higher than m the killed and aerobic reactors because of the added nutrients. Conductivity then increased in the anaerobic systems to over 3,000 μS/cm after 120 days. The initial conductivity in the killed and aerobic reactors was approximately 150 μS/cm. Conductivity increased to final values of roughly 650 μS/cm and I.100 μS/cm in the killed and aerobic systems. respectively. Since conductivity increases in the killed reactors are strictly from abiotic processes. subtracting these values from those observed in the biologically active systems gives an estimate of the increases in conductivity due to DF biodegradation processes in those systems. After 120 days in the killed reactors, conductivity increased 500 μS/cm (650 μS/cm- 150 μS/cm). Subtracting this value from the conductivity increases observed after 120 days in the aerobic systems (2,600 μS/cm) and anaerobic systems (950 μS/cm). yields an increase in conductivity of the aerobic and anaerobic systems of approximately 2,100 μS/cm and 450 μS/cm, respectively. From this analysis it is clear that specific conductivity increased roughly 4.5 times more in the anaerobic reactors than in the aerobic ones. This IS consistent with enhanced microbial activity, greater VOA production and carbonate dissolution. and enhanced production of biosurfactants in the anaerobic systems relative to the aerobic ones (Figs. 1-3).

Table 1. Measurements of dissolved solids in the pore waters from the three systems at the conclusion of the 120-day experiment.

Measurement	Anaerobic	Aerobic	Killed
Total DS (mg/L)	2130 ± 64 (8)[a]	758 ± 46 (8)	416 ± 28 (8)
Inorganic DS (mg/L)	1518 ± 54 (8)	602 ± 35 (8)	416 ± 28 (8)
Organic DS (mg/L)	612 ± 36 (8)	156 ± 31 (8)	0
Inorganic DS/Organic DS	2.5	3.9	NA
Total DS/Conductivity	0.72	0.69	0.64

[a] mean ± standard deviation (number of measurements). NA = not applicable.

Bulk conductivity was not measured in the reactors. However, specific conductivity is the major variable affecting bulk conductivity measurements, as described by Archie's Law. Using a soil porosity of 0.4 (common for unconsolidated sands) and other commonly used values for Archie's Law the ratio of specific conductivity to bulk conductivity is 10 (Telford *et al.*, 1990). This means that the increase in specific conductivity observed in the anaerobic systems due to DF biodegradation processes was 210 μS/cm (2,100 S/cm/10). This represents a significant increase in bulk conductivity measured in the field. Furthermore, the reactors in this study were only operated for 120 days. These results clearly show that biodegradation of DF can have a significant effect on bulk conductivity measurements at NAPL-impacted sites.

Table 1 lists results from the dissolved solids (DS) measurements of pore waters from the three systems at the end of the 120-day experiment. Total DS concentrations ranged from 416 mg/L in the killed controls to 2,130 mg/L in the anaerobic reactors. The value in the killed control (416 mg/L) was strictly due to abiotic processes, and subtracting this value from the total DS concentration in the anaerobic and aerobic systems gives an indication of the increase in those system due to DF biodegradation processes. This analysis yields an increase in total DS due to DF biodegradation in the anaerobic and aerobic systems of 1,714 mg/L and 342 mg/L, respectively. The organic DS concentration in the killed controls was zero, which is supported by the lack of microbial activity and lack of associated products (Figs. 1–3). The ratios of inorganic DS to organic DS concentrations in the anaerobic and aerobic reactors were 2.5 and 3.9, respectively. The lower ratio for the anaerobic system is explained by the greater concentrations of biosurfactants and emulsified DF (Fig. 3). The ratio of total DS concentrations to conductivity in the reactors on day 120 ranged from 0.64 to 0.72. These ratios are within the range of 0.55–0.75 reported for a survey of natural groundwaters (Hem, 1970).

The results clearly show that products of DF biodegradation in the reactors increased with increasing microbial activity and were greater for the anaerobic systems (with added nutrients) than for the aerobic ones (without added nutrients). DF biodegradation resulted in an increase in inorganic DS due to mineral dissolution and in organic DS due to organic acid and biosurfactant production. The increase in DS resulted in increases in conductivity. The anaerobic reactors simulated subsurface conditions at a LNAPL-impacted site with anomalously high conductivities (Atekwana *et al.*, 1999; Werkema *et al.*, 2000). The results from this study show that products of LNAPL biodegradation can explain those anomalous resistivities.

Conclusions

The results show that LNAPL biodegradation, under aerobic and anaerobic conditions, can substantially change pore water biogeochemistry, producing dramatic increases in electrical conductivity. These results help explain anomalously high conductivities reported in recent geophysical investigations at several LNAPL-contaminated sites. It has been known for some time that LNAPL biodegradation produces CO_2 and can produce organic acids, which enhance mineral dissolution. However, this study is the first to link these biogeochemical processes to enhanced pore water conductivity. This is also the first study demonstrating in situ biosurfactant production and LNAPL emulsification. The results suggest that biosurfactant production can accelerate a change in conditions from NAPL-wetted to water-wetted solids over time. The resulting increase in water/solids contact area could affect resistivity and GPR measurements.

ABOUT ITRC

Established in 1995, the Interstate Technology & Regulatory Council (ITRC) is a state-led, national coalition of personnel from the environmental regulatory agencies of some 40 states and the District of Columbia; three federal agencies; tribes; and public and industry stakeholders. The organization is devoted to reducing barriers to, and speeding interstate deployment of, better, more cost-effective, innovative environmental techniques. ITRC operates as a committee of the Environmental Research Institute of the States (ERIS), a Section 501(c)(3) public charity that supports the Environmental Council of the States (ECOS) through its educational and research activities aimed at improving the environment in the United States and providing a forum for state environmental policy makers. More information about ITRC and its available products and services can be found on the Internet at **www.itrcweb.org.**

FOREWORD

This Principles and Practices Document was prepared by the Industrial Members of the Bioremediation of Chlorinated Solvents Consortium of the Remediation Technologies Development Forum (RTDF) to disseminate up-to-date scientific information regarding **natural attenuation** (also referred to as **intrinsic remediation**) of **chlorinated solvents**. This information was assembled from research activities of the RTDF and from the experience and knowledge of the following participating companies and organizations of the RTDF Bioconsortium: Beak International, Dow Chemical Company, DuPont Company, General Electric Company, Imperial Chemical Industries, Monsanto Company, Novartis, and Zeneca Inc.

The RTDF is a public and private sector collaboration to develop innovative solutions to complex hazardous waste problems. The mission of the RTDF Bioconsortium is to accelerate the development of cost-effective bioremediation processes for degrading chlorinated solvents and to achieve public and regulatory acceptance that these processes are safe and effective.

The industrial members of the RTDF intend for this document to be as consistent as possible with the Air Force Center for Environmental Excellence and United States Environmental Protection Agency (AFCEE/EPA) Protocol which is currently under development. However, this document is not a “how to” manual; its purpose is to provide a "framework" to evaluate natural attenuation of chlorinated volatile organic compounds (VOC), that is, how to think about natural attenuation based on science. As a scientific document, its intent is not to dispense regulatory information. A separate document that provides the industrial members of the RTDF responses to reviews of previous versions of this document, issues requiring further discussion, and planned future revisions/additions to the document, is also available to the public.

ACKNOWLEDGMENTS

The RTDF appreciates the efforts of the following individuals in preparing this document: Dr. David Major, Evan Cox, and Dr. Leo Lehmicke of Beak International; Dr. David Ellis, Dr. Ron Buchanan, Ed Lutz, and Dr. Mike Lee of DuPont; Dr. Joseph Salvo, Dr. Jay Spivak, and Dr. Mark Harkness of General Electric Company; and Dr. Gary Klecka of Dow Chemical Company.

NATURAL ATTENUATION OF CHLORINATED SOLVENTS IN GROUNDWATER: PRINCIPLES AND PRACTICES

INTRODUCTION

Q 1: What is natural attenuation?

A 1: Natural attenuation (also known as intrinsic remediation or natural restoration) was defined by the Office of Solid Waste and Emergency Response (OSWER) of the EPA as follows:

> *The term "natural attenuation" refers to naturally-occurring processes in soil and groundwater environments that act without human intervention to reduce the mass, toxicity, mobility, volume or concentration of contaminants in those media. These in-situ processes include biodegradation, dispersion, dilution, adsorption, volatilization and chemical or biological stabilization or destruction of contaminants.*

Simply stated, natural attenuation would be an accepted remedy when physical, chemical, and/or biological processes act to reduce the mass, toxicity, and/or mobility of subsurface contamination in a way that reduces risk to human health and the environment to acceptable levels.

The National Contingency Plan permits the use of natural attenuation as a remedy or a portion of a remedy for Superfund sites. In addition, several states (e.g., New Jersey, South Carolina, Wisconsin) have developed regulations and/or guidance regarding the evaluation and implementation of natural attenuation.

Q 2: Is natural attenuation a "do nothing" approach?

A 2: Natural attenuation is <u>not</u> a "do nothing" approach because it involves:

- Characterizing the fate and transport of the chlorinated solvents to evaluate the nature and extent of the natural attenuation processes;
- Ensuring that these processes reduce the mass, toxicity and/or mobility of subsurface contamination in a way that reduces risk to human health and the environment to acceptable levels;
- Evaluating the factors that will affect the long-term performance of natural attenuation; and

- Monitoring of the natural processes to ensure their continued effectiveness.

Q 3: How often is natural attenuation effective?

A 3: It has been estimated by the EPA (J. Wilson, pers. comm.) that natural attenuation will be effective as the sole remedy at approximately 20% of all chlorinated solvent sites. It has also been estimated that natural attenuation may serve as a portion of the remedy at an additional 50% of all chlorinated solvent sites (Ellis et al., 1996).

Q 4: Why should natural attenuation be evaluated?

A 4: Natural attenuation should be evaluated at chlorinated solvent sites because it is:

- A common sense approach to protect human health and the environment;
- A cost-effective alternative that can be used as a stand-alone technology or in association with other remediation technologies to reduce overall remediation costs;
- Minimally intrusive and usually less disruptive of facility operations and infrastructure compared to most remediation technologies; and
- Important to understand natural geochemical processes before implementing any remedial measure.

The advantages and disadvantages of natural attenuation are listed in Table 1.

Q 5: What is the intent of this Principles and Practices Document?

A 5: The intent of this document is to:

- Distill the practical aspects of the current state of the science into a framework to efficiently and economically assess natural attenuation;
- Develop a document that describes the status and benefit of natural attenuation in layman's terms and can be continually updated as new information becomes available and as feedback from stakeholders is received;
- Guide readers on how to easily integrate natural attenuation into new and/or ongoing site characterization or groundwater monitoring programs;
- Provide guidance to the public, regulators, site managers, and practitioners on how to evaluate, interpret, and validate the contribution of natural attenuation of chlorinated solvents; and

- Reference appropriate sampling and interpretation protocols and guide readers to other relevant materials.

These goals will allow the RTDF Bioconsortium to keep pace with the rapid advances in the science and knowledge that serves as the basis of this technology and to update the document on the world wide web (http://www.rtdf.org) and in print form. In the near future, the RTDF Bioconsortium will also publish documents on two other technologies: **accelerated anaerobic bioremediation** and **co-metabolic bioventing**

Q 6: Who should read/use this Principles and Practices Document?

A 6: This document has been designed to be a valuable resource tool for the public, regulators, site managers, and practitioners

Q 7: How is the Principles and Practices Document Organized?

A 7: The Document is divided into four topic sections. The first section titled "Introduction" provides information on the intent of the document, who should read/use it, what natural attenuation is and why it should be considered. The second section titled "Background" provides information regarding the technical challenges associated with sites contaminated with chlorinated solvents and the types of chlorinated solvent attenuation processes that are known to occur. The third section titled "Evaluating Natural Attenuation" provides information on how natural attenuation studies are generally conducted and what types of information are typically required to document natural attenuation. The fourth section titled "Methods" presents a step-wise process, accompanied by a flow chart that can be used to evaluate and implement natural attenuation at sites contaminated by chlorinated solvents.

Q 8: Where can key terms and definitions be found?

A 8: Appendix A provides a glossary of key terms that are commonly used in natural attenuation of chlorinated solvents. Words that appear in bold type in this document are defined in the glossary. Appendix E contains a list of acronyms that are used throughout this document.

BACKGROUND

Q 9: Why is this document focusing on chlorinated solvents?

A 9: Chlorinated solvents such as tetrachloroethene (also known as perchloroethene, PCE), trichloroethene (TCE), trichloroethane (TCA), and carbon tetrachloride (CT) are commonly used as degreasing agents at manufacturing, maintenance and service facilities around the world. They are among the most common soil and groundwater contaminants. Some of these chlorinated compounds and some of their degradation intermediates may be toxic or carcinogenic. Chlorinated solvents are a class of chemicals that can be amenable to natural attenuation but such naturally-occurring mechanisms have not been the subject of much research in the past. Consequently, such mechanisms have been over looked by both the regulated community and the regulators.

Q 10: What are the most common misconceptions regarding chlorinated solvents and their natural attenuation?

A 10: Three of the most common misconceptions regarding chlorinated solvents and their natural attenuation are that:

- Chlorinated solvents can be easily found and remediated;
- Only biological processes are important or should be considered; and
- More toxic intermediates are likely to accumulate.

Questions 11 through 14 address the first misconception, question 15 addresses the second misconception, and question 17 addresses the third misconception.

Q 11: What are the technical challenges associated with sites contaminated with chlorinated solvents?

A 11: The physical properties of many chlorinated solvents make them extremely difficult to locate, remove or treat in the subsurface. Chlorinated solvents can exist and migrate in multiple phases depending on how they were released and site conditions. These phases include:

- Vapor phase in unsaturated soils;
- Dissolved phase in groundwater; and
- Liquid phase in the subsurface (e.g., droplets, coatings, or pools) as shown in Figure 1. Chlorinated solvents in this phase are referred to as **nonaqueous phase liquids** (NAPL), which do not mix with water (i.e., they form a separate layer from water). NAPL that are less dense than water float on the water table and are referred to as light

NAPL (LNAPL). NAPL that are denser than water sink below the water table and are referred to as dense NAPL (DNAPL). Most chlorinated solvents are DNAPL.

Q 12: What are the technical challenges associated with DNAPL?

A 12: The properties of DNAPL that make their investigation and remediation difficult and, in some cases, technically impracticable include:

- Complex Distribution: The distribution of DNAPL is strongly controlled by small variations in site geology and cannot be readily simulated or predicted. A released DNAPL will generally sink below the water table, spreading until it reaches confining layers (e.g., clay lenses, **aquitards**, **bedrock**) or becomes bound to the geologic matrix. Once below the water table, DNAPL do not necessarily move in the direction of groundwater flow. As a result, all of the DNAPL mass in the subsurface cannot be accurately located with current investigation technologies or techniques. An accurate determination of location is a prerequisite for effective source removal or treatment. The movement of DNAPL into small fractures and pore spaces in the subsurface prevents the effective removal of much of the DNAPL mass. Missing even a small amount of DNAPL mass means that recontamination of the groundwater can occur. It is estimated that at most DNAPL sites, over 99.9% of the DNAPL would have to be removed in order to approach the restoration levels needed to allow use of the aquifer as a drinking water supply (Pankow and Cherry, 1996).

- Low Solubilities: The low solubility of DNAPL means that it generally takes decades to centuries for DNAPL to dissolve into the groundwater. This significantly limits the utility of groundwater extraction and treatment as a remediation technology for cleanup of DNAPL sites.

- Slow Diffusion: The rate of diffusion from the geological matrix is much slower than the rate of sorption and diffusion onto/into the geological matrix. This means that even if free-phase DNAPL are treated, the slow diffusion out of the geological matrix may cause chlorinated solvents to be present in groundwater for long periods of time.

- Potential to Exacerbate the Problem through Investigation and Attempted Treatment: Improper drilling techniques in the vicinity of a DNAPL source area may result in penetration of an aquitard or confining layer, creating a new pathway for DNAPL to move downward. Similarly, treatment techniques such as de-watering to expose free DNAPL for vapor extraction may promote DNAPL migration by reducing their buoyancy.

Q 13: Can the presence of DNAPL be determined?

A 13: Site investigations designed to find DNAPL are generally impractical and ineffective. The presence of DNAPL should be suspected at sites where chlorinated solvents were typically used and disposed of (in tanks and/or waste ponds) as immiscible phase, unless historical records can account for waste solvent volume (e.g., recycling, off-site treatment/disposal).

Visual observation of DNAPL during the site investigation is not required to infer DNAPL presence. As a general rule, detecting chlorinated solvents in groundwater at concentrations exceeding 1% of their solubility suggests the presence of DNAPL or residuals (Pankow and Cherry, 1996).

Q 14: How does the presence of DNAPL affect site remediation strategy?

A 14: Proven, safe, and cost-effective technologies to remediate DNAPL sources in most groundwater environments are currently not available. Conventional groundwater remediation technologies in place at chlorinated solvent sites (e.g., groundwater extraction and treatment) remove solvents that have dissolved in the groundwater. These technologies employ long-term, active processes that are often costly and quickly reach a point of diminishing returns. As indicated above, small amounts of DNAPL mass can re-contaminate groundwater, generally making remediation of DNAPL sources to current regulatory criteria technically impracticable. Technical impracticability (TI) waivers are an appropriate regulatory mechanism and have been recognized by the EPA as appropriate for DNAPL sources.

Remediation/management strategies for most DNAPL sites should focus on integrating innovative, cost-effective techniques that will operate over the long term to mitigate risk to human health and the environment through containment. Natural attenuation is ideally suited for integration into long-term site management programs to address chlorinated solvents dissolved in groundwater. At some point in the future, more effective source removal or destruction technologies may become available. In the interim, mass removal via natural attenuation processes should be considered.

A thorough understanding of DNAPL is essential in any discussion of chlorinated solvents in groundwater. The reader is referred to Pankow and Cherry (1996) for detailed information on DNAPL behavior and its implications on remediation.

Q 15: What processes contribute to the natural attenuation of chlorinated solvents?

A 15: The processes that contribute to natural attenuation of chlorinated solvents include:

- **Degradation**: The degradation of most chlorinated solvents in groundwater occurs by **oxidation-reduction reactions** that are predominantly carried out by bacteria in the environment. These are referred to as **biodegradation** reactions. Biodegradation is usually the predominant process of natural attenuation at chlorinated solvent sites. Because of the significant and varied contributions of biodegradation to natural attenuation, biodegradation processes are discussed further in Questions 16 through 18. Some chlorinated solvents may also degrade by chemical reactions with metals (e.g., iron and iron-complexes) or water (e.g., hydrolysis reactions). Table 2 provides a list of case studies where degradation by theses processes have been documented to occur.

- **Advection, Dispersion, and Dilution**: Advection is the transport of molecules dissolved in water. During advection, molecules will also spread along and away from the expected groundwater flow path. This process is called dispersion and results from the mixing of groundwater (the solvent) and other molecules (the solute) in individual pores and channels. The combined processes of advection and dispersion result in a reduced concentration of the molecules (dilution) in the groundwater.

- **Diffusion**: Diffusion is a dispersive process that results from the movement of molecules along a concentration gradient. Molecules move from areas of high concentration to low concentration.

- **Sorption/Desorption**: Molecules can adsorb onto and, in some cases, be absorbed by geologic materials. Over time, these molecules will desorb from the geologic materials in response to concentration gradients. Sorption affects the advective rate of molecules dissolved in groundwater

- **Volatilization**: The transfer of a molecule from a liquid phase or an aqueous solution to the vapor phase (phase transfer) is termed volatilization. Chlorinated solvents are volatile organic compounds (VOC) that partition between liquid and gas phases, with the less chlorinated compounds having a tendency towards higher volatility. Volatilization may contribute to natural attenuation through the transfer of VOC from the liquid phase in the subsurface (NAPL, groundwater) to vapors in the vadose zone or to the atmosphere.

- **Stabilization**: Stabilization is a process whereby chemical molecules become chemically bound or transformed by a stabilizing agent (e.g., clay, humic materials), reducing the mobility of the molecule in the groundwater. It is usually a more irreversible reaction than adsorption.

The processes of advection, dispersion, dilution, diffusion, sorption/desorption, volatilization and stabilization are physical processes that are included in the EPA's definition of natural attenuation and are legitimate attenuation processes. They may have only a small impact at sites with high concentrations of chlorinated solvents, but may be sufficient, in and of themselves, at some sites where concentrations are low. A search of the EPA Record of Decision (ROD) database in 1995 using the search words "natural attenuation," "intrinsic bioremediation," and "intrinsic remediation" indicated 35 RODs in which natural attenuation or intrinsic remediation was selected as all or part of the remedy (Hagemann and Gill, 1995). Of these 35 sites, 17 had chlorinated solvents as one or more of the chemicals of concern. Review of these 17 sites indicate that physical attenuation mechanisms were the predominant removal mechanism at many of them; several sites had only parent compound at low concentrations (< 200 micrograms per liter [ug/L]).

Q 16: How do chlorinated solvents biodegrade?

A 16: Chlorinated solvents biodegrade by several processes, including:

- **Direct oxidation**, whereby the chlorinated compound is directly used as a **growth substrate** (**electron donor**/food source) and broken down to inorganic molecules such as carbon dioxide, water, and chloride;

- **Reductive dehalogenation**; whereby the chlorinated compound is converted to another chemical by replacing chlorine atoms with hydrogen atoms; and

- **Co-metabolism**, whereby the chlorinated compound is converted to another chemical while microorganisms use other carbon compounds for their growth substrate (food source).

Table 3 lists common chlorinated solvents and their current known degradation pathways. Figure 2 presents common degradation pathways for common chlorinated solvents.

In contrast to the biodegradation of **petroleum hydrocarbons**, evidence suggests that only a few chlorinated solvents can be used as growth substrates. Specific chlorinated solvents that can be directly oxidized are vinyl chloride (VC); dichloroethene (DCE); dichloromethane (DCM); chloromethane (CM); 1,2-dichloroethane (1,2-DCA); and chloroethane (see Table 3 and Figure 2). In **aerobic** environments (in the presence of oxygen which serves as the **electron acceptor**), chlorinated solvents are co-metabolized (i.e., used as a secondary food source) by non-specific microbial **oxygenase enzymes** that are produced by microorganisms to metabolize other growth substrates (e.g., methane, propane, toluene, ammonia, ethene, ethane). In **anaerobic** environments (in the absence of oxygen), chlorinated solvents act as **electron acceptors** in a process called **reductive dechlorination**, where hydrogen atoms replace chlorine atoms on the chlorinated solvent

molecule. Other carbon substrates (e.g., alcohols, ketones, hydrocarbons, and/or natural organic compounds) serve as **electron donors** in these reactions. Figure 3 shows a "cut-away" of a TCE plume naturally attenuating, with reductive dechlorination being the predominant process.

It should be noted that all of the biological processes described above have been discovered since 1980. Biodegradation of chlorinated solvents is a new science and the state of the science is changing constantly; at least two new processes were documented for the first time in 1996.

Q 17: What are the products of chlorinated solvent biodegradation?

A 17: The aerobic mineralization of chlorinated solvents ultimately yields carbon dioxide, water, and chloride. Aerobic co-metabolic biodegradation of chlorinated solvents generally proceeds via an unstable epoxide intermediate that spontaneously decomposes to environmentally acceptable water-soluble products, carbon dioxide, and chloride (Roberts, et. al 1989). The aerobic oxidation of chlorinated solvents can ultimately yield carbon dioxide, water, and chloride or other organic by-products such as acetate. The anaerobic biodegradation of chlorinated solvents via sequential dechlorination of the parent chlorinated compound proceeds to non-chlorinated products such as ethene, ethane and methane. For example, the anaerobic dechlorination of PCE proceeds via TCE; 1,2-DCE (the cis-isomer is the predominant isomer formed); and VC to ethene and ethane. Each successive step in the dechlorination process is theoretically slower than the proceeding step and, therefore, at some sites, biodegradation may not proceed to completion. As a result, intermediate compounds (e.g., DCE) may accumulate. For a long time, it was commonly believed that VC would accumulate. However, it is now known that VC can be biodegraded under almost all of the potential conditions found in the subsurface because it can undergo direct biodegradation under both aerobic and anaerobic conditions. Complete dechlorination products such as ethene or chloride are not deemed to be a problem. For example, the maximum contaminant level (MCL) for chloride is 1,000 mg/l. TCE biodegradation in the 100 mg/l range would result in the slow release of approximately 80 mg/l of chloride over a long period of time.

Q 18: Are all of the appropriate bacteria present at every site?

A 18: In general, all "types" of bacteria (e.g., aerobic, anaerobic) are present at all sites. However, all bacteria involved in all of the potential biodegradation pathways for chlorinated solvents are not necessarily present at every site. For example, it is believed that all of the bacteria needed for the reductive dechlorination of PCE or TCE to DCE are present at approximately 90% of all sites, and all of the bacteria needed for the reductive dechlorination of PCE or TCE to ethene are present at approximately 75% of all sites.

EVALUATING NATURAL ATTENUATION

Q 19: When should natural attenuation be evaluated?

A 19: Natural attenuation should be evaluated to some degree at every site, preferably early in the site investigation process. It is important to understand the natural attenuation processes before implementing any remedial measure. A thorough understanding of natural attenuation processes is necessary if natural attenuation is to be implemented as the remedy, a portion of the remedy, or when an alternative remedy such as enhanced bioremediation is being considered. Natural attenuation should be evaluated thoroughly when:

- Natural attenuation processes are observed or strongly expected to be occurring; and
- There are no human or ecological receptors that are likely to be impacted or potential receptors in the vicinity of the plume are, or can be protected.

In addition, natural attenuation should be considered as the remedy or portion thereof when:

- It is protective of human health and the environment;
- A continuing source that cannot cost effectively be removed or contained will require a long-term remedial effort;
- Alternative remediation technologies are not cost-effective or are technically impracticable; and
- Alternative remedial technologies pose significant added risk by transferring contaminants to other environmental media, spreading contamination or disrupting adjacent ecosystems.

Q 20: When should natural attenuation <u>not</u> be considered in the remedy?

A 20: Natural attenuation should <u>not</u> be considered as the remedy or a portion of the remedy when natural attenuation will not be protective of human health and the environment or alternative remediation technologies can more reliably and cost-effectively treat the contaminants to minimize risk. Comparative costs for different technologies are presented in Table 4.

In some instances, specific regulatory guidelines or the desires of regulatory agencies at a specific site may prevent the use of natural attenuation even though it may be sufficiently protective of human health and the environment.

Q 21: What evidence is required to evaluate and implement natural attenuation?

A 21: Natural attenuation is generally evaluated using a "lines of evidence" approach. This approach forms the basis for all current protocols and guidance documents. The suggested lines of evidence are:

1. Documented reduction of contaminant mass at the site;

2. Presence and distribution of **geochemical** and **biochemical** indicators of natural attenuation; and

3. Direct microbiological evidence.

Q 22: How are the three lines of evidence documented?

A 22: Typically, the first line of evidence (i.e., loss of contaminants) is documented by reviewing historical trends in contaminant concentration and distribution in conjunction with site geology and hydrogeology to show that a reduction in the total mass of contaminants is occurring at the site. This mass loss may be in the source area and/or along the groundwater flowpath. Because most chlorinated solvents do not biodegrade on their own like petroleum hydrocarbons, biodegradation rates are more site-specific (e.g., dependent on redox conditions, electron donor concentration). Therefore, it is more important to estimate a biodegradation rate at chlorinated solvent sites from field data (Buscheck and Alcantar 1995; Weaver et.al 1996).

The second line of evidence is documented by examining changes in the concentrations and distributions of geochemical and biochemical indicator parameters that have been shown to be related to specific natural attenuation processes.

The third line of evidence (i.e., microbiological evidence) is documented through laboratory microcosm studies and is used to: 1) confirm specific chlorinated solvent biodegradation processes that cannot be conclusively demonstrated with field data alone (e.g. anaerobic VC oxidation) and/or 2) estimate site-specific biodegradation rates that cannot be conclusively demonstrated with field data alone. The need to collect the third line of evidence is evaluated on a case-by-case basis and is generally only required when field data supporting the first two lines of evidence are insufficient to adequately support natural attenuation.

Q 23: What data are required to support the three lines of evidence?

A 23: The types of data that are required to support the three lines of evidence depend on the type of site and the nature and extent of attenuation processes that are occurring. Table 5

summarizes several common patterns of chlorinate solvents in groundwater including their distribution and relates these patterns to suggested data collection tiers to support natural attenuation. The conceptual model for a given site can be compared to these common patterns to determine what data collection tier is appropriate to evaluate and support the lines of evidence approach. The specific data that should be collected for each data collection tier are listed in Table 6. Information on the ideal use of each parameter in evaluating natural attenuation and the status of its measurement (e.g., commercially available or research) is also provided in Table 6.

The list of parameters for each tier has been developed based on the experience of the authors. Collection of all parameters may not be required for all sites. The reader may benefit from customizing the data collection tiers to suit specific site conditions.

METHODS

This section provides the reader with a step-wise framework that can be used to review data for a given chlorinated solvent site, evaluate whether the natural attenuation of chlorinated VOC is occurring, identify and collect additional data that support the three lines of evidence of natural attenuation, and integrate natural attenuation into a long-term site remediation/management strategy. It is anticipated that these activities can be conducted concurrent with other investigation and remediation planning activities. Figure 4 summarizes this information in a flowchart format.

Step 1. Review Available Site Data

The first step in evaluating natural attenuation is to review available site data. For Superfund sites, data is typically available from Remedial Investigation (RI), Risk Assessment, and Feasibility Study (FS) documents. For Resource Conservation and Recovery Act (RCRA) facilities, data will typically be available from RCRA Facility Investigation (RFI) and Corrective Measures Study (CMS) documents, and/or RCRA Alternate Concentration Limit Demonstration reports. Monitoring reports for existing remediation systems may also be available for review. It is important to identify potential receptor exposure points (e.g., drinking water wells, surface or groundwater discharge points) at this time if not yet identified.

Site characterization is necessary for sites with insufficient data. Appendix B references site investigation protocols. Evaluating natural attenuation should be incorporated into the site investigation at uncharacterized sites since the costs of collecting the additional data to evaluate natural attenuation are outweighed by the cost savings that may be realized if natural attenuation is integrated into the long-term site remediation strategy. Step 4 discusses the level of natural attenuation data that should be collected at uncharacterized sites.

Step 2. Review/Develop the Site Conceptual Model

Review the available data to determine whether a **site conceptual model** has been developed. The site conceptual model is a representation of the site-specific groundwater flow and solute transport system. This model is typically used to:

- Present and explain chemical distributions in the site groundwater in relation to groundwater flow and transport processes; and

- Facilitate the identification of risk assessment elements used in exposure analysis, including sources, release mechanisms, transport pathways, exposure points, and potential receptors.

RI documents typically present a site conceptual model that is based on available geological, hydrogeological and chemical data. These models generally do not adequately integrate chemical fate due to degradation (biological and abiotic) processes, and these processes are very site-specific for chlorinated solvents. However, as they exist, site conceptual models are useful to identify:

- Reduction of chemical mass in relation to groundwater flow and transport;

- Locations at the site (relative to sources, receptors or site boundaries) where additional data is required to document reduction of chemical mass and presence of geochemical indicators of natural attenuation processes; and

- Specific types of data that should be collected at the locations selected.

A site conceptual model is necessary if it is not presented in the available site documents. Appendix B references protocols for conceptual model development.

Step 3. Screen the Data for Evidence of Natural Attenuation and Develop Hypothesis to Explain the Attenuation Processes.

The available site data and site conceptual model should be screened both to assess whether natural attenuation is occurring and to develop a hypothesis regarding the processes that are promoting the attenuation. Screening for natural attenuation can be conducted by reviewing the information and answering the following questions:

1. Do the existing data provide evidence for reduction of chemical mass (line of evidence #1)?

    - Have concentrations of known or suspected parent chlorinated solvents decreased over time?

- Do observed chlorinated solvent distributions differ (decrease along the flow path) from distributions predicted from expected transport in groundwater?

2. Do the existing data provide evidence for the presence of geochemical or biochemical indicators of natural attenuation (line of evidence #2)?

   - Are known degradation products (e.g., cis-1,2-DCE, VC, or ethene at a TCE site, see Table 5) present in the groundwater? Have ratios of dechlorination daughter products to parent solvents increased over time and is cis-1,2-DCE the predominant DCE isomer?

   - Do available data indicate production or consumption of carbon sources or production of inorganic constituents consistent with known biodegradation reactions (e.g., increased alkalinity, chloride and/or dissolved iron concentrations in source area wells)?

Yes answers to any/all of these questions typically indicates that biodegradation processes are occurring and should be further evaluated following Steps 4 through 9. Figures 5 and 6 provide examples (accompanied by explanations) of several common patterns of chlorinated solvent biodegradation in anaerobic and sequential anaerobic/aerobic systems, respectively. Sites where screening does not indicate the occurrence of these **biological** processes may still be candidates for natural attenuation, depending on the results of exposure pathways analysis, and should be further evaluated by advancing to Step 8.

Step 4. Identify Additional Data Requirements

Identification and selection of additional data to test the natural attenuation hypothesis and support the lines of evidence approach is a site-specific process. However, the process can generally be conducted as follows:

1. Compare the conceptual model for the given site to the common patterns of chlorinated solvent presence and distribution presented in Table 5. Select the pattern that best approximates conditions at the given site and identify the suggested data collection tier. Using Table 6, identify the specific data parameters that correspond to the selected data collection tier. As an example, the conceptual model for a site having 1,2-DCE and VC in the groundwater near a TCE storage or disposal area should be similar to Pattern 3 and would warrant collection of Tier 2 data.

2. Select locations for additional data collection based on the site conceptual model. Locations should be selected to represent upgradient (background), lateral, source and several downgradient conditions, including at least one well beyond the terminus (toe) of the VOC plume. For sites having significant vertical flow components, locations should be selected to represent the vertical profile as well. The adequacy of existing well coverage to test/support the natural attenuation hypothesis should be evaluated.

Additional monitoring locations may need to be installed to adequately test/support the natural attenuation hypothesis. For example, the capacity of the natural system to degrade chlorinated hydrocarbons that are directly oxidized is almost totally dependent on the amount of electron acceptors in background groundwater just as it is with petroleum hydrocarbons; therefore, the need for a true "background" well is important. However, the installation of new wells in what might be considered the "source area" at a DNAPL site is highly discouraged (see Chapter 13 of Pankow and Cherry , 1996).

3. Critically evaluate the need for microcosm studies. Microcosm studies provide direct microbiological evidence and are used to: 1) confirm specific chlorinated solvent biodegradation processes and/or 2) estimate site-specific biodegradation rates that can not be conclusively demonstrated with field data alone. Because microcosm studies are both expensive and time consuming, they should only be performed when the information cannot be obtained from field data. Microcosm studies are designed using aquifer sediment and groundwater samples collected from the site and should provide direct evidence for natural attenuation of chlorinated solvents under simulated redox conditions that occur at the site. If these studies are required, they can also be used to characterize: i) soil adsorption potential; ii) mass balance; iii) the role of available electron donors/co-metabolites in supporting natural attenuation processes; and iv) factors that may affect/inhibit natural attenuation over time, including the ability to enhance the natural processes.

For uncharacterized sites, a minimum of Tier 1 data should be collected during site characterization to evaluate the potential for natural attenuation. An evaluation of site use history should indicate whether Tier 2 or Tier 3 data should also be collected. For example, if site records indicate that waste solvents (e.g., TCE) were used and disposed of along with sewage, petroleum hydrocarbons, or other solvents (e.g., acetone, methanol, methylene chloride), then it is likely that some degree of intrinsic biodegradation has occurred; therefore, collection of Tier 2 or 3 data during site characterization may be warranted.

Step 5. Collect Additional Data

Data should be collected following appropriate protocols to ensure the quality and integrity of the data. Appendix B is a resource guide that references accepted protocols for well installation and development, well purging and sampling, field parameter measurement, chemical and microbial analyses, and QA/QC procedures.

Step 6. Refine the Site Conceptual Model

The site conceptual model should be refined by incorporating new data and reinterpreting site conditions as indicated below. Appendix B references protocols for tasks listed below (e.g., calculation, modeling).

1. Reconstruct:

   - Potentiometric surface (water table) maps with updated data and data from any new monitoring points to assess lateral components of groundwater flow.

   - Hydrogeologic cross-sections parallel and perpendicular to the groundwater flow path with updated data and data from new monitoring points to assess vertical (upward/downward) components of groundwater flow.

   - Isopleth contour maps and vertical cross sections (if warranted) of key groundwater chemistry parameters. Maps existing for the initial site conceptual model (e.g., VOC, possibly anions) should be updated to include new data. Maps should be prepared for new data parameters [e.g., degradation products, redox parameters, electron donors/co-metabolites, electron acceptors, conservative tracers (chloride)].

   - Plots of concentration versus time or concentration versus distance for key groundwater chemistry parameters for wells located on the groundwater flowpath(s).

2. Estimate:

   - Mass balance for parent and daughter products, including both metabolic intermediates (e.g., DCE, VC) and final products (e.g., ethene, ethane, methane, inorganic chloride).

   - Flux of parent and daughter products and, if possible, electron donors, electron acceptors, and co-metabolites.

   - Sorption and retardation of chemicals (from literature or laboratory tests).

   - Biodegradation kinetics such as half-life or degradation rate constants. Biodegradation kinetics can be estimated by evaluating field data (changes in concentration over distance) or laboratory microcosm studies.

   - Estimate the long-term capacity of the aquifer to sustain natural attenuation (e.g., half-life/degradation rate of electron donors/acceptors/co-metabolites promoting degradation).

3. Conduct:

- Fate and transport modeling if the site hydrogeology is complex enough to warrant the effort to better understand the flow regime. Groundwater fate and transport models are currently available to simulate groundwater flow and solute transport (see Appendix B). Models incorporating biodegradation kinetics for natural attenuation of chlorinated solvents are currently under development.

- Compare concentration profiles generated for various time intervals in model simulations conducted with and without incorporating biodegradation kinetics.

- Perform a sensitivity analysis for key geological, hydrogeological, and attenuation factors. Assess the need to refine the available data.

Step 7. Interpret the Data and Test/Refine Conceptual Model

Review the refined site conceptual model and determine whether the data fit this conceptual model.

If the data support the natural attenuation hypothesis developed in Step 3 (i.e., distributions of parent and daughter products are consistent with redox and distribution of electron donors/acceptors, metabolic products and site hydrogeology), then exposure pathways analysis should be conducted (Step 8).

If data do not support the hypothesis developed in Step 3 (i.e., the redox and/or distributions of electron donors/acceptors or metabolic products do not support the distribution of parent and daughter products), then the hypothesis should be refined and re-tested. In most cases, the available data is sufficient to test new or refined hypotheses. However, some additional data collection (a return to Step 4) may be required to test new/refined hypotheses at complex sites.

Step 8. Conduct an Exposure Pathway Analysis

The refined conceptual model should be examined in association with identified human and ecological risks and the following questions should be answered:

- Are the rates of natural attenuation processes sufficient to reduce risk (now and in the future) to human and ecological receptors to acceptable levels?

If yes, then the site is a strong candidate for a natural attenuation alternative and implementation of natural attenuation should be considered as discussed in Step 9. If no:

- Can other engineering controls or technologies control or further reduce this risk such that natural attenuation is sufficient?

If yes, then these options should be further evaluated/implemented. Integration of natural attenuation into the overall remediation strategy should then be considered where it may be cost-effective. If implementation of engineering controls is technically impracticable (e.g., at some DNAPL sites), then natural attenuation may be the primary mechanism of risk reduction and therefore natural attenuation should be incorporated into the long-term site management strategy.

Step 9. If Accepted, Integrate Natural Attenuation into the Long-Term Site Management Strategy

The long-term prognosis of natural attenuation should be assessed by answering the following question:

- Will factors promoting natural attenuation be sustained over the long term (e.g., is the amount of available electron donor/acceptor/co-metabolite sufficient to maintain intrinsic degradation or will additional electron donor need to be added at a later date, and when)?

If yes, then develop a strategy for long-term management that incorporates monitoring and process validation to ensure that regulatory requirements are met (e.g., no adverse impact). If no, evaluate whether it will be possible to enhance the naturally occurring processes in the future (at such time this is required) or whether other remediation technologies can be implemented currently or at a later date to support natural attenuation. A backup remedial technology should be selected at a conceptual level along with natural attenuation even when natural attenuation is selected as the sole remedy.

Findings and the proposed strategy should be presented to regulatory agencies (and the public where appropriate) and final acceptance should be pursued. Upon acceptance, a natural attenuation strategy should be implemented. This final step occurs here exactly as in the AFCEE protocol. In the future, when natural attenuation is as accepted a technology as others currently in use, this step will belong here. In the interim, it is highly recommended that any proponent of natural attenuation actively seek the involvement of regulatory agencies and other stakeholders as early as possible in the process. Involvement should ideally occur after Step 2 or 3, when the proponent has convinced themselves that natural attenuation is worth investigating, but prior to collection of additional data. Acceptance by regulatory agencies at this point will ensure that money is not wasted on additional investigation and that all required data is collected efficiently.

Table 7 contains the elements of a long-term monitoring plan and Figure 7 shows the locations of monitoring wells.

APPENDIX 2

Indoor Air Quality Logs and Forms

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Evan Pumrese Date/Time Prepared 1/21/10 8:30

Preparer's Affiliation G. Bella Associates, P.C. Phone No. 585-454-6110

Purpose of Investigation Sol / Vapor Intrusion Investigation - 690 St. Paul Street - Bldg. 14A

1. OCCUPANT:

Interviewed: Y / N

Last Name: Gallace First Name: Dante

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ✓)

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
~~Industrial~~	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) _____

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 6 Building age 100 +

Is the building insulated? Y / (N) How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

_____

_____

_____

Airflow near source

_____

_____

_____

Outdoor air infiltration

_____

_____

_____

Infiltration into air ducts

_____

_____

_____

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply) No Basement

a. Above grade construction:	wood frame	concrete	stone	brick
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N	not applicable		

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

_____

_____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: None Present

Boiler/furnace located in: Basement Outdoors Main Floor Other_____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

No duct work present

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level	General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)
Basement	None
1st Floor	Storage, Fire Suppression Room
2nd Floor	Unoccupied / office space
3rd Floor	Unoccupied
4th Floor	Unoccupied

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / N

b. Does the garage have a separate heating unit? Y / N / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / NA
Please specify Mowers / Bobcat

d. Has the building ever had a fire? Y / N When? _____

e. Is a kerosene or unvented gas space heater present? Y / N Where? _____

f. Is there a workshop or hobby/craft area? Y / N Where & Type? Machine Shop in attached building

g. Is there smoking in the building? Y / N How frequently? Very infrequently

h. Have cleaning products been used recently? Y / N When & Type? Daily in attached school building

i. Have cosmetic products been used recently? Y / N When & Type? _____

j. Has painting/staining been done in the last 6 months? Y / N Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / N Where & When? _____

l. Have air fresheners been used recently? Y / N When & Type? _____

m. Is there a kitchen exhaust fan? Y / N If yes, where vented? _____

n. Is there a bathroom exhaust fan? Y / N If yes, where vented? _____

o. Is there a clothes dryer? Y / N If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / N When & Type? _____

Are there odors in the building? Y / N
If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / N
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? Machine Shop - Paint work

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)
Yes, use dry-cleaning infrequently (monthly or less)
Yes, work at a dry-cleaning service
No
Unknown

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply:	Public Water	Drilled Well	Driven Well	Dug Well	Other: _____
Sewage Disposal:	Public Sewer	Septic Tank	Leach Field	Dry Well	Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

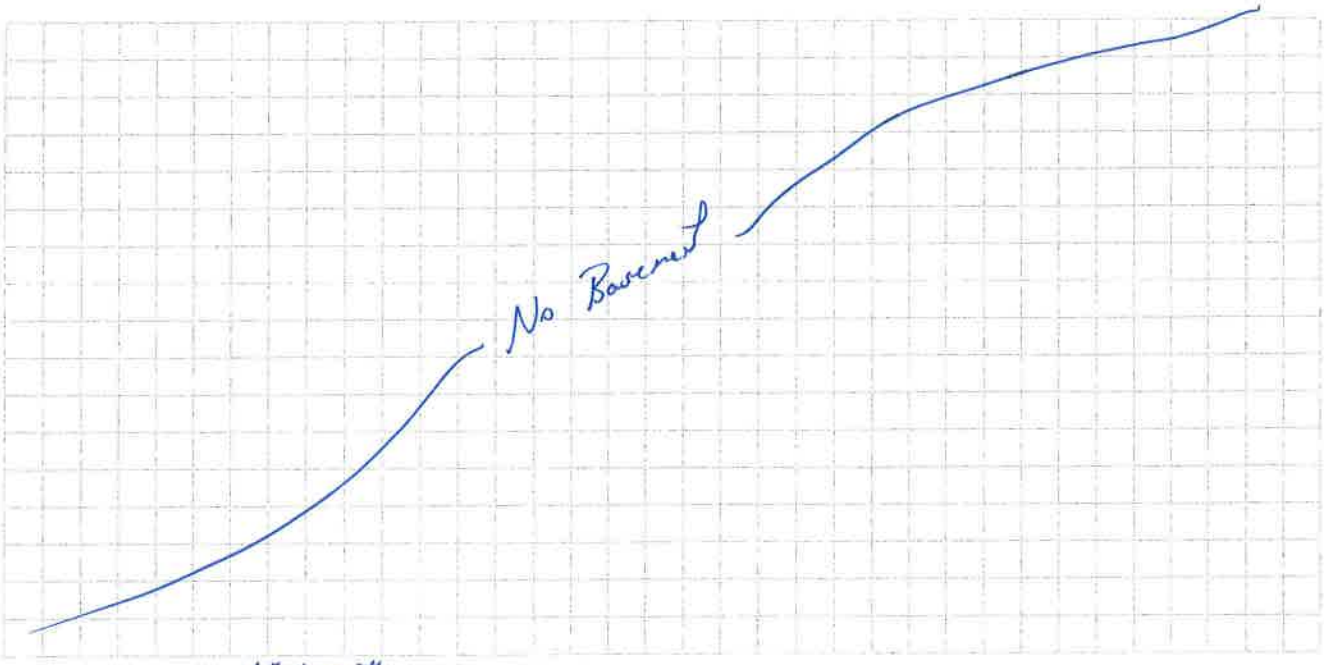
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

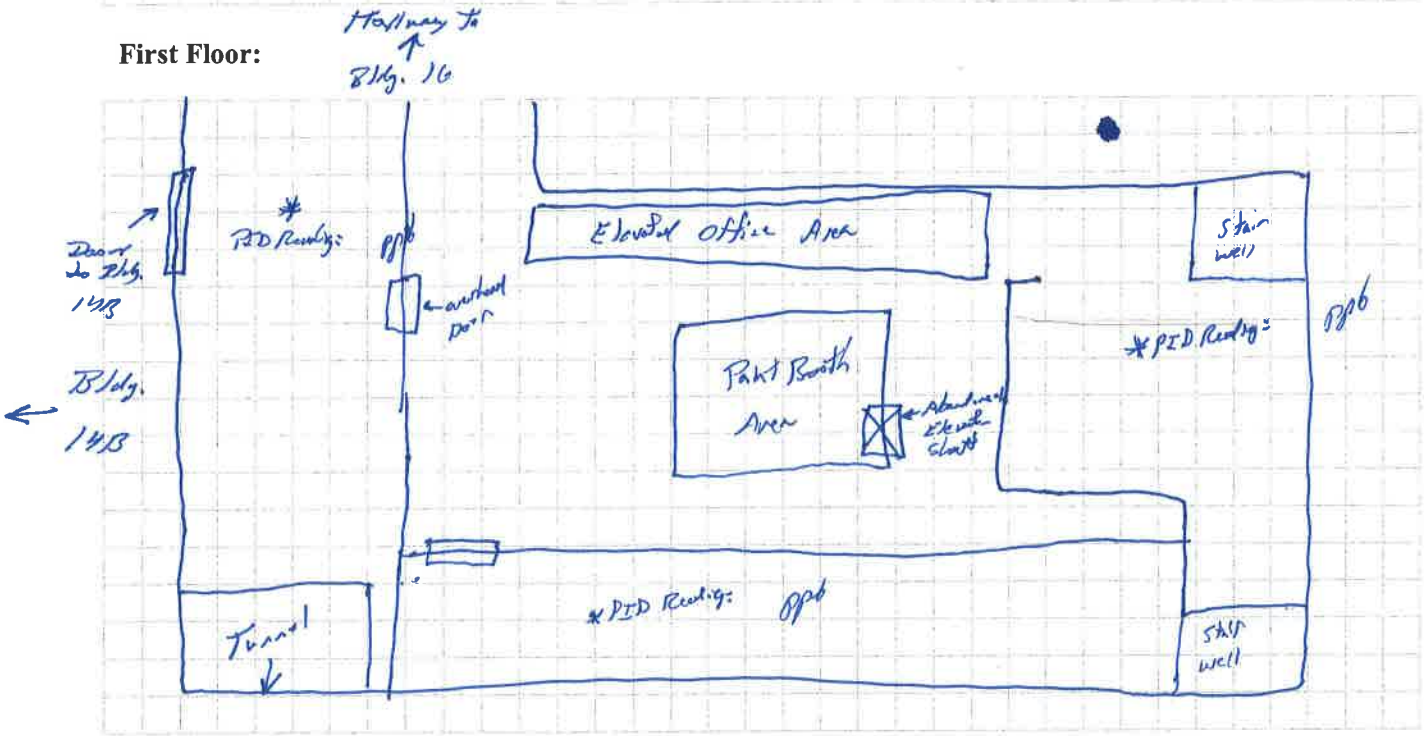
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:



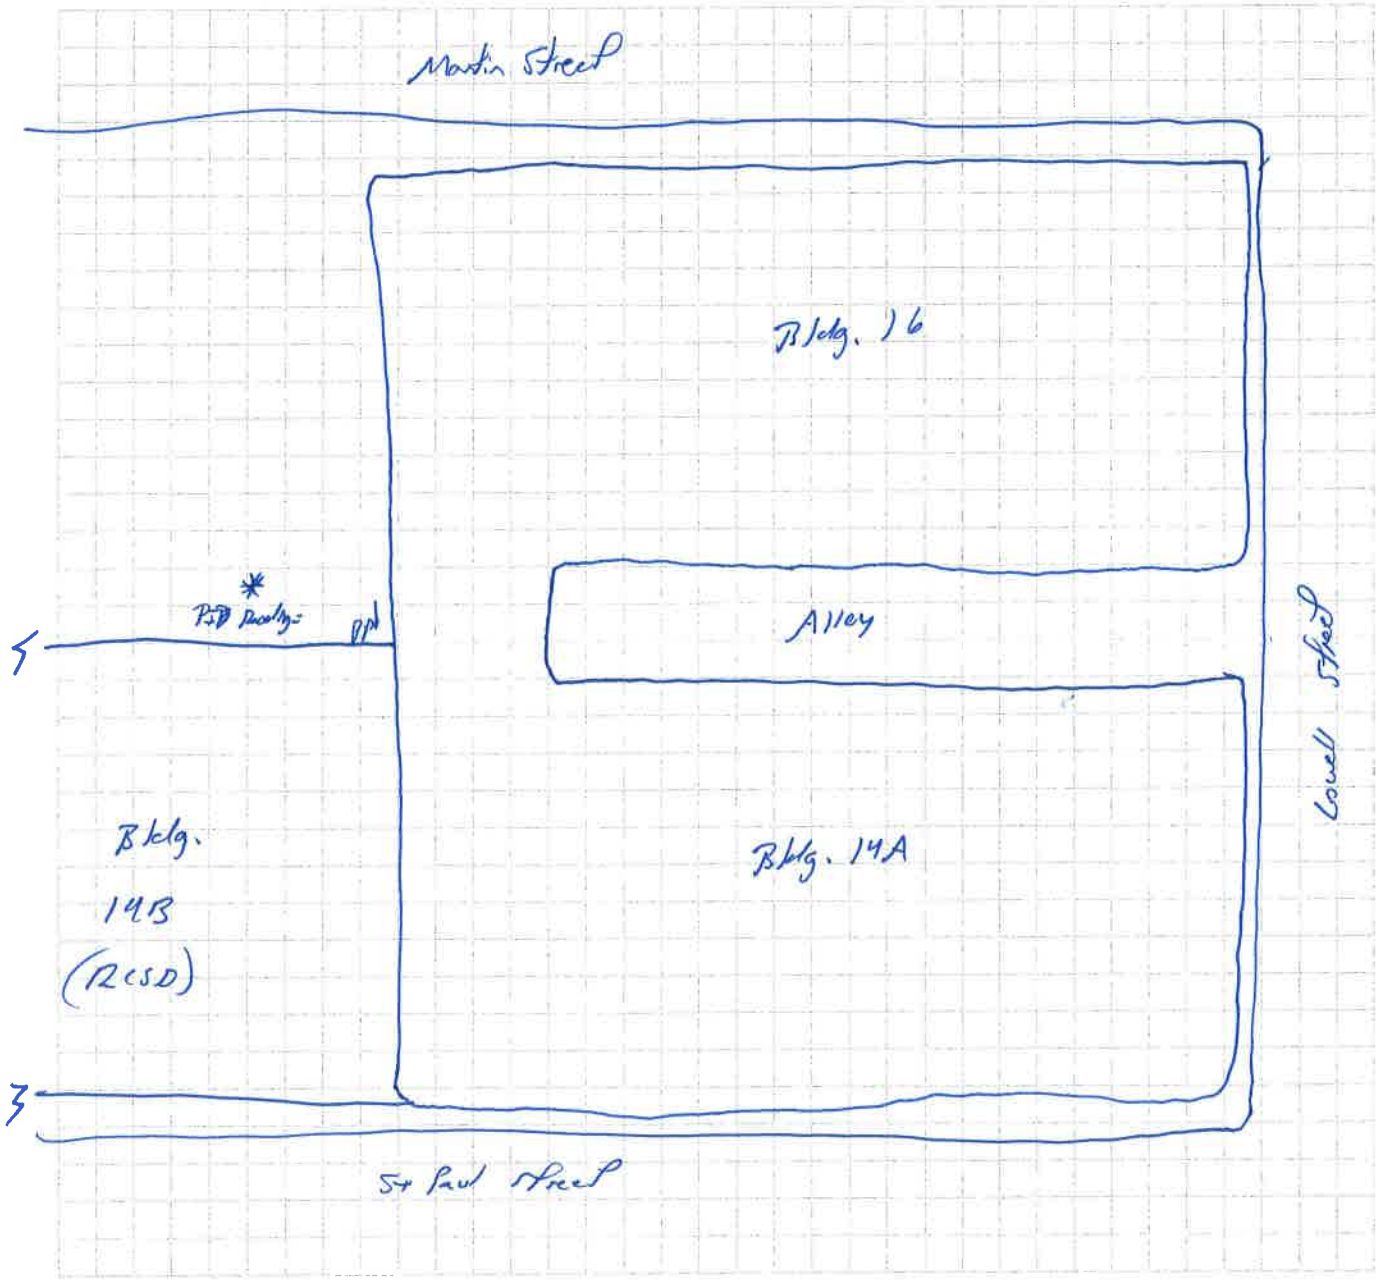
First Floor:



12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae, PPB Rae

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
1st Floor	Motor Oil 15W-40 x3	1-Gal.	U		447	Y
	Anti-Freeze	1-Gal.	U		316	Y
	Diesel Engine (Fire Suppression)	—	U		363	Y
	Hydraulic Oil x2	5-Gal.	U		129	Y
	Cold Water Detergent.	5-Gal.	U		188	Y
	Gas Roller	—	U		274	Y
	Pittsburgh Paints Latex Paint x17	5-Gal.	U		109	Y
	Unknown Drums x12	55-Gal	U		112	Y
	Pittsburgh Paints Latex Paint x52	1-Gal	UO		88	Y
	Paint Stripper x1	1-Gal.	U		133	Y
	Capitol Panel Bond Adhesive	5-Gal.	UO		249	Y
	Valvoline - 5W-30 Motor Oil	1-Qt.	U, D		69	Y
	Propane Tank for Fork Lift.		U, D.		175	Y
	Carlisle Splicing Cement x2	1-Gal	UO, U		99	Y
	Carlisle HR 250 Primer	1-Gal	U		88	Y

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae PPB Rae

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae, PPB Rae

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Evan Dunrose Date/Time Prepared 1/21/10 11:00

Preparer's Affiliation LaBella Associates, P.C. Phone No. 585-454-6110

Purpose of Investigation Soil Vapor Intrusion Investigation Survey - 690 St. Paul St. - Bldg. 16

1. OCCUPANT:

Interviewed: Y / N

Last Name: Wallace First Name: Dale

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
Industrial	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Machine Shop / Storage

Does it include residences (i.e., multi-use)? Y (N) If yes, how many? _____

Other characteristics:

Number of floors 6 Building age ~100 +/-

Is the building insulated? Y / (N) How air tight? Tight / Average / (Not Tight)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. **BASEMENT AND CONSTRUCTION CHARACTERISTICS** (Circle all that apply) No Basement

a. Above grade construction:	wood frame	concrete	stone	brick
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

_____

_____

6. **HEATING, VENTING and AIR CONDITIONING** (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: No hot water heater

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? Y / (N)

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

7. OCCUPANCY

Is basement/lowest level occupied? (No Basement) Full-time Occasionally Seldom Almost Never (Never)

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	None
1st Floor	Machine Shop / Storage
2nd Floor	Unoccupied
3rd Floor	Unoccupied
4th Floor	Unoccupied

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? (Y) / N

b. Does the garage have a separate heating unit? Y / (N) / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) / N / NA Please specify Bobcat, Mowers

d. Has the building ever had a fire? Y / (N) When? _____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where? _____

f. Is there a workshop or hobby/craft area? (Y) / N Where & Type? Machine Shop / 1st floor

g. Is there smoking in the building? (Y) / N How frequently? Daily

h. Have cleaning products been used recently? (Y) / N When & Type? Solvents

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? Y / N Where & When? ?

k. Is there new carpet, drapes or other textiles? Y / N Where & When? _____

l. Have air fresheners been used recently? Y / N When & Type? _____

m. Is there a kitchen exhaust fan? Y / N If yes, where vented? _____

n. Is there a bathroom exhaust fan? Y / N If yes, where vented? _____

o. Is there a clothes dryer? Y / N If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / N When & Type? _____

Are there odors in the building? Y / N
If yes, please describe: Cutting Oil Odors

Do any of the building occupants use solvents at work? Y / N
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) No
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: Public Water Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

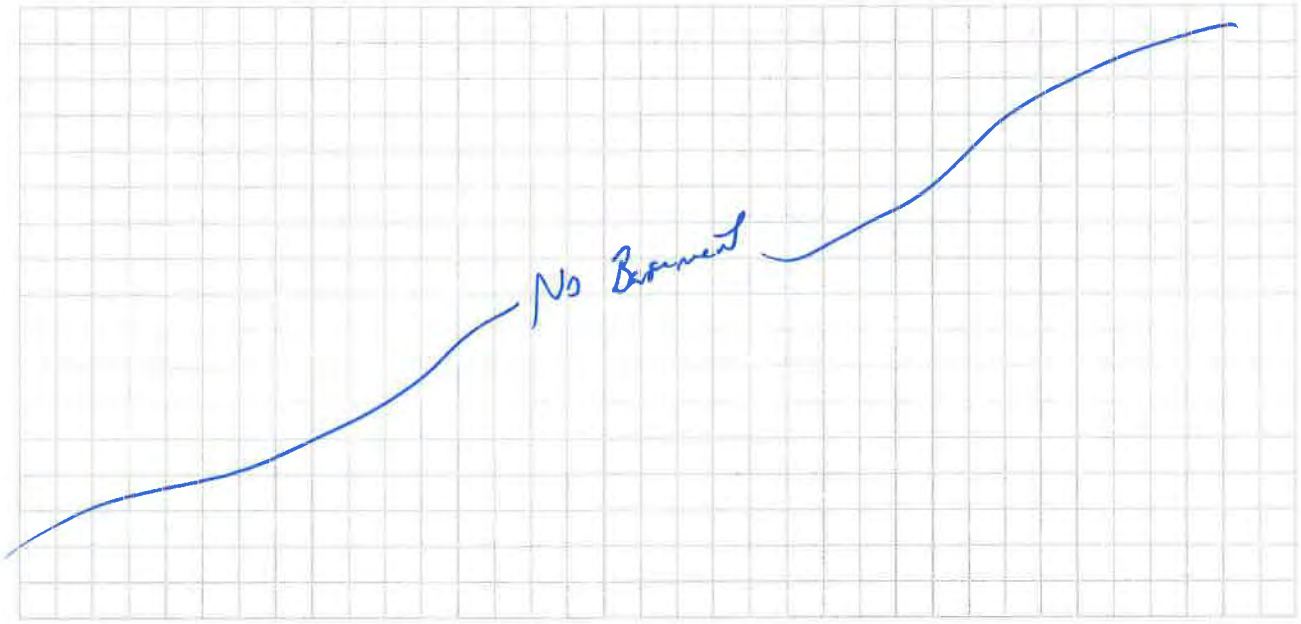
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

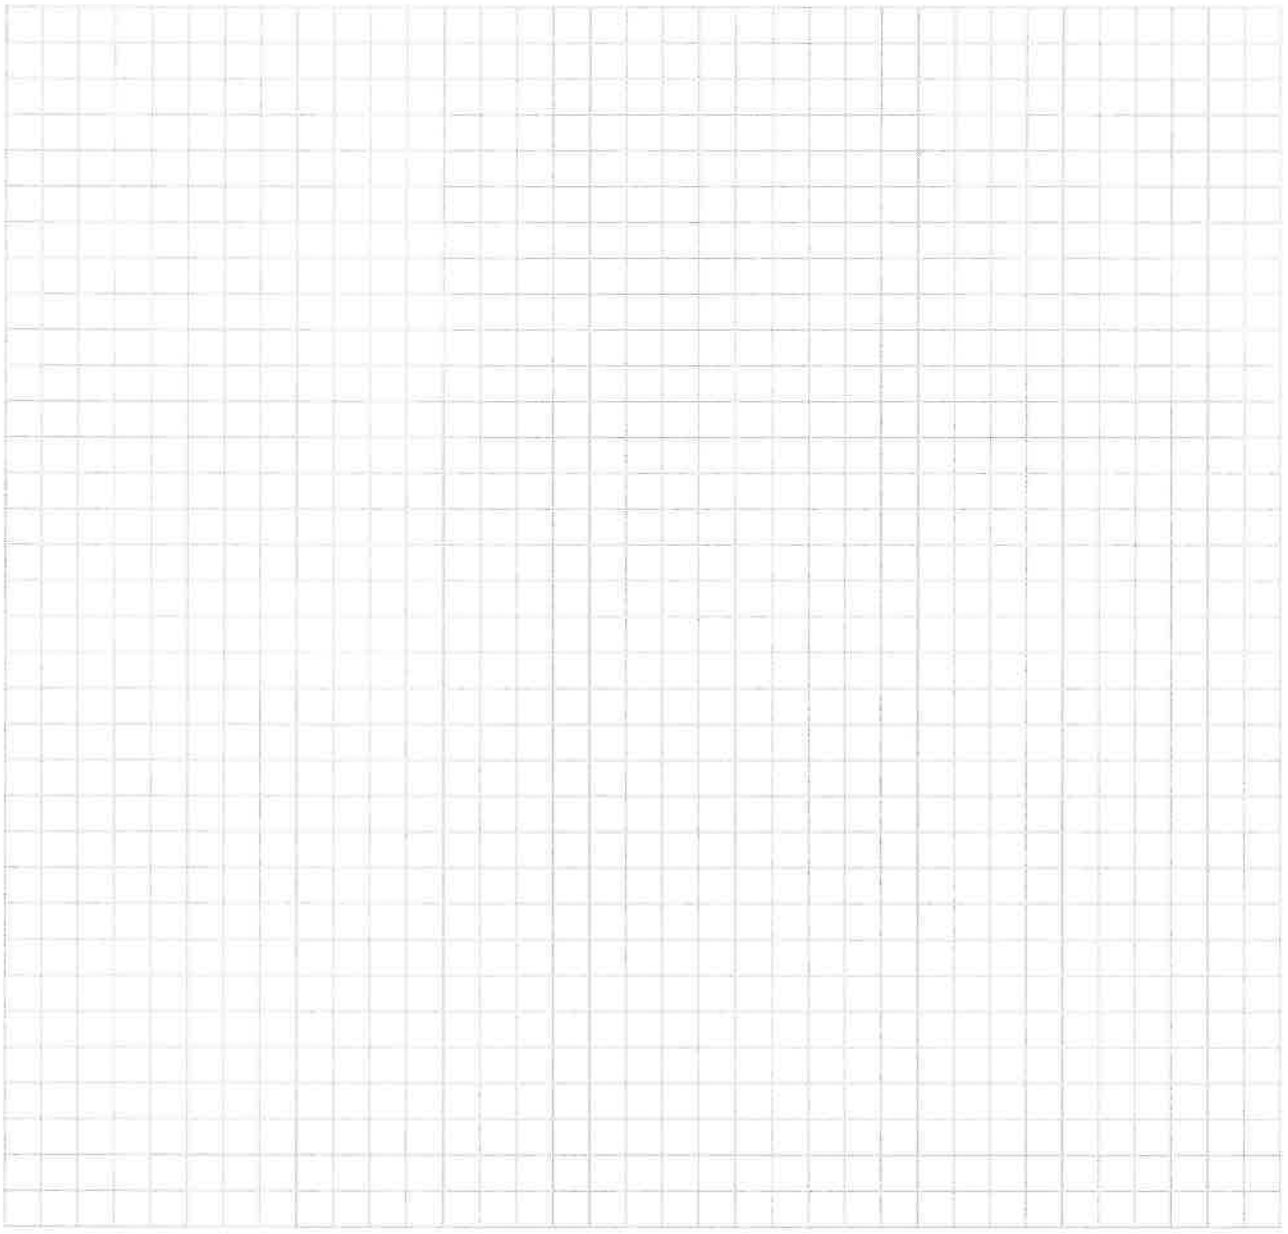


First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: MiniRae ppbRAE 3000 PID

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
1st floor	Gas powered lawn mowers	x2	U		604	Y
	Bobcat / Skidsteer	x1	U		973	Y
open	Bucket of cleaning solution	~1 gal.	U, D		468	Y
	Pittsburgh Paint Latex x4	1-Gal	U, UO		446	Y
	DAP window Glazing	1-Cart	U		442	Y
	Snowblower	1	U		653	Y
	PVC-Primer & Cement	1 qt. 1 pt.	U		503	Y
	Sprayers x 7	Varies	U		692	Y
	Various Latex Paint cans x100	1 gal	U, D, UO		499	Y
	" " x	5-Gal.	U, D, UO		568	Y
	Various cleaning/degreasing agents	Varies	U, UO		666	Y
Machine Shop	Unknown drum w/ liquids	55-Gal	U, D		3,088	Y
	Kerosene fuel canister	5-Gal.	U		4,238	Y
	Various spray bottles w/ cleaning agents x3	1-qt.	U, D		4,054	Y
	Open drum, empty w/ cutting oil @ bottom	55-Gal.	U		7,880	Y
	Fork lift	1	U		4,052	Y

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Machine Shop PID Reading = 3,050 ppb

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
Industrial	Church	(Other): Set Design Center for Geva Theatre

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Set Design Center for Cow Theatre Co.

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 40

Is the building insulated? (Y) / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

N/A

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply) No Basement

a. Above grade construction:	wood frame	concrete	stone	brick
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

_____

_____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: [redacted] Electric

Boiler/furnace located in:	Basement	Outdoors	Main Floor	Other_____
Air conditioning:	Central Air	Window units	Open Windows	None

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Forced Air Furn heating unit mounted on ceiling of structure.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never None Present

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	None
1st Floor	Painting, Carpentry
2nd Floor	None
3rd Floor	None
4th Floor	None

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / N

b. Does the garage have a separate heating unit? Y / N / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / NA Please specify Delivery truck stored in garage

d. Has the building ever had a fire? Y / N When?

e. Is a kerosene or unvented gas space heater present? Y / N Where?

f. Is there a workshop or hobby/craft area? Y / N Where & Type? Wood working / Painting

g. Is there smoking in the building? Y / N How frequently?

h. Have cleaning products been used recently? Y / N When & Type?

i. Have cosmetic products been used recently? Y / N When & Type?

j. Has painting/staining been done in the last 6 months? (Y) / N Where & When? In Southern portion of bldg., weekly

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented? _____

n. Is there a bathroom exhaust fan? Y / (N) If yes, where vented? _____

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type? _____

Are there odors in the building? Y / (N)
If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) — No
Yes, use dry-cleaning infrequently (monthly or less) — (Unknown)
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / (N) Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

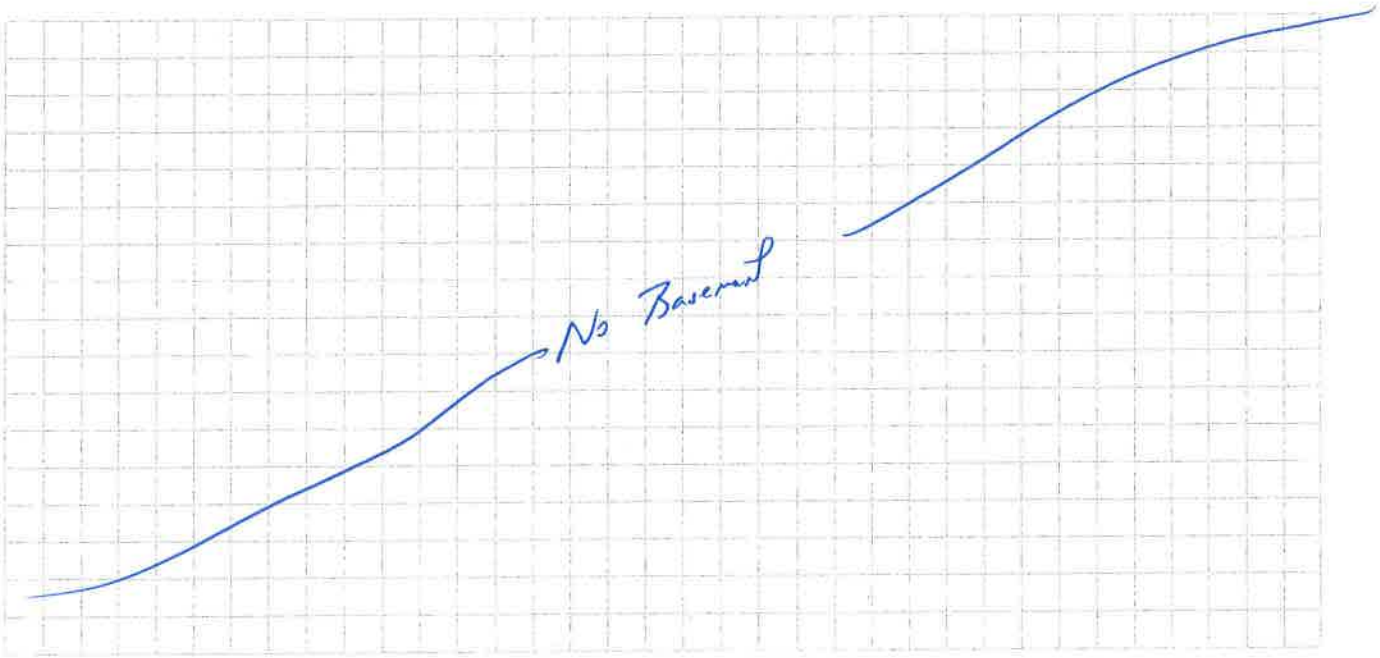
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

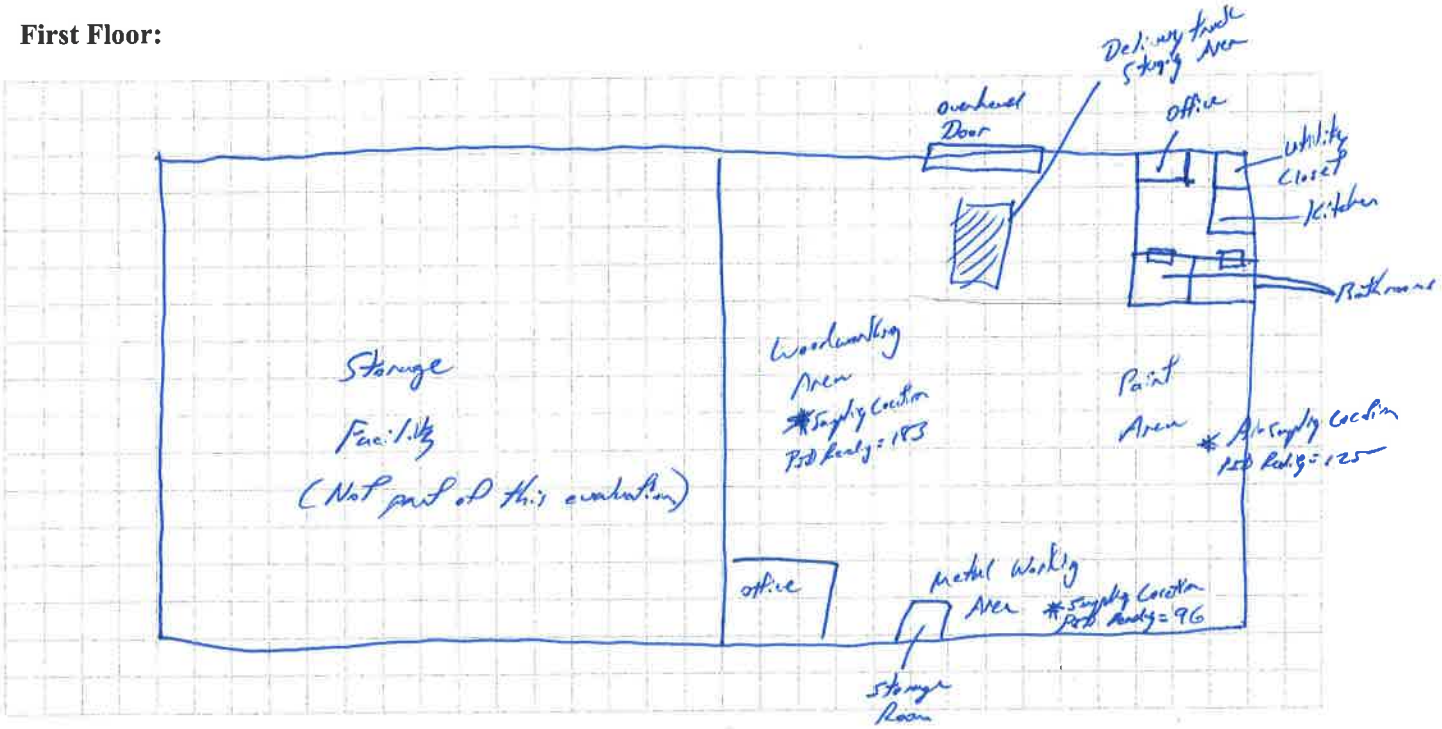
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:



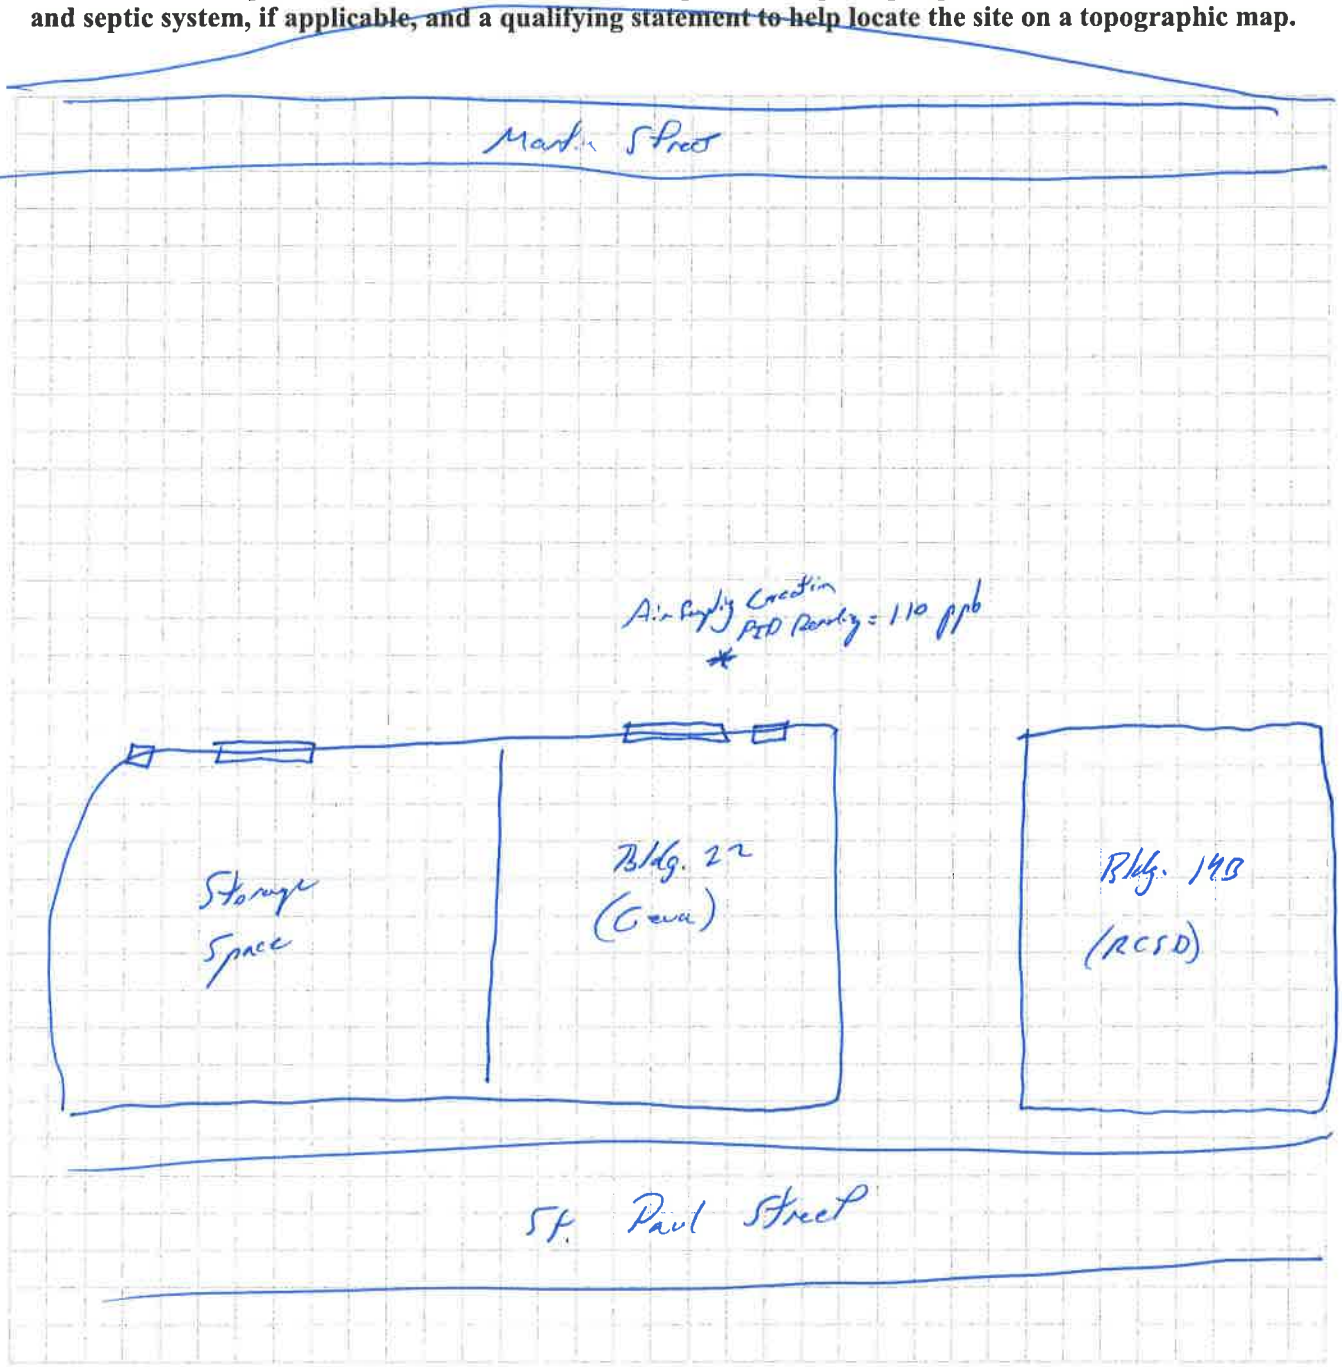
First Floor:



12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae, PPB Rae

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N
1st Floor	Compressed Gas Cylinder Argon	1-full cylinder	U		58	Y
	WD-40	8 oz.	U		72	Y
	Cutting Fluid	4 oz.	U		9	Y
	Magic Marker	1	U		191,000	Y
	Wood Glue	1	U		56	Y
	Spray Paint	2-8 oz.	U		11	Y
	Weldwood Contact Cement x3	1-Gallon	UO		384	Y
	Elmer's Glue x4	1-Gallon	UO		251	Y
	3M Fast Bond Contact Adhesive x2	1-Qt.	UO, U		312	Y
	Novus Plastic Polish	8 oz.	U		254	Y
	Weld-on Cement for Acrylic Sheet	5 oz.	U		277	Y
	Weld-on Solvent Cement x2	16 oz.	U, UO		2,536	Y
	Liquid Nails-Adhesive	1-Gal	U		1,651	Y
	Air Tool Lubricant	16 oz	U		226	Y
	Cello-Cleaner-Acrylic Furniture Polish	16 oz.	U		172	Y
	Various 10-W-30 Motor Oil containers x 13	1-Qt.	U, UO, D		181	Y
	WD-40	12 oz.	U		229	Y
	Lithium Grease	11 oz.	U		171	Y
	Various Spray Paints x2a	12 oz.	U, UO		185	Y

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae, PPB Rae

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
	Bearing Lubricant	5.5-oz	U		200	Y
	K-lux - Cleaner for Plastics	8-oz.	U		206	Y
	Minwax Stains x16 (various size containers)	8oz. - 32oz.	U		134	Y
	~~Sheetrock Joint Compound~~	~~5-Gal~~	~~U~~		~~219~~	~~Y~~
	Spare paint (left-overs) x22	5-Gal	U		371	Y
	Assorted paints x4 x54	1-Gal 1-Qt.			291	Y
	Mineral Spirits	1-Gal	U		3,310	Y
	Epoxy part A	1-Qt	U		2,195	N
	Epoxy Part B	1-Gal	U		2,855	N
	Linseed Oil	1-Gal	U		1,655	Y

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Evan Dumrese Date/Time Prepared 1/20/12 11:00

Preparer's Affiliation LaBella Associates, P.C. Phone No. 585-454-6110

Purpose of Investigation 690 St. Paul Street - Soil Vapor Intrusion - Storage Space in Bldg. #22

1. OCCUPANT:

Interviewed: Y / N

Last Name: Gullace First Name: Dave

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
Industrial	Church	(Other: Storage)

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Commercial Storage

Does it include residences (i.e., multi-use)? Y (N) If yes, how many? _____

Other characteristics:

Number of floors 1 Building age_____

Is the building insulated? (Y) / N How air tight? Tight / Average / (Not Tight)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply) Slab-on-grade

a. Above grade construction:	wood frame	concrete	stone	brick steel
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: N/A (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

_____

_____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation primary	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: N/A

Boiler/furnace located in: Basement Outdoors Main Floor Other Ceiling

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? Y / (N)

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

None Present

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never (Never)

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	None
1st Floor	Storage
2nd Floor	None
3rd Floor	None
4th Floor	None

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / (N)

b. Does the garage have a separate heating unit? Y / N / (NA)

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) / N / NA
Please specify Diesel Fuel AST

d. Has the building ever had a fire? Y / (N) When? _____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where? _____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type? _____

g. Is there smoking in the building? Y / (N) How frequently? _____

h. Have cleaning products been used recently? Y / (N) When & Type? _____

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? (Y) / N Where & When? Adjoining bldg (Recently)

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented? _____

n. Is there a bathroom exhaust fan? Y / (N) If yes, where vented? _____

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type? _____

Are there odors in the building? Y / (N)
If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) (No)
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / (N) Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply:	Public Water	Drilled Well	Driven Well	Dug Well	Other: None
Sewage Disposal:	Public Sewer	Septic Tank	Leach Field	Dry Well	Other: None

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: N/A

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

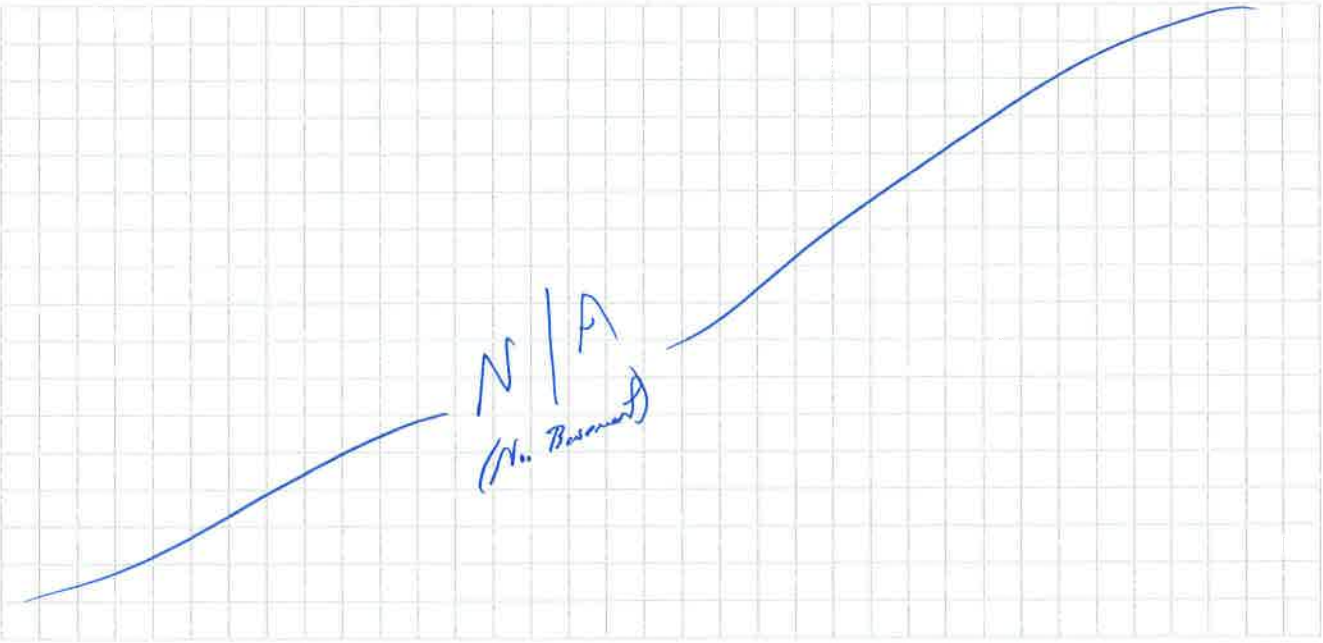
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

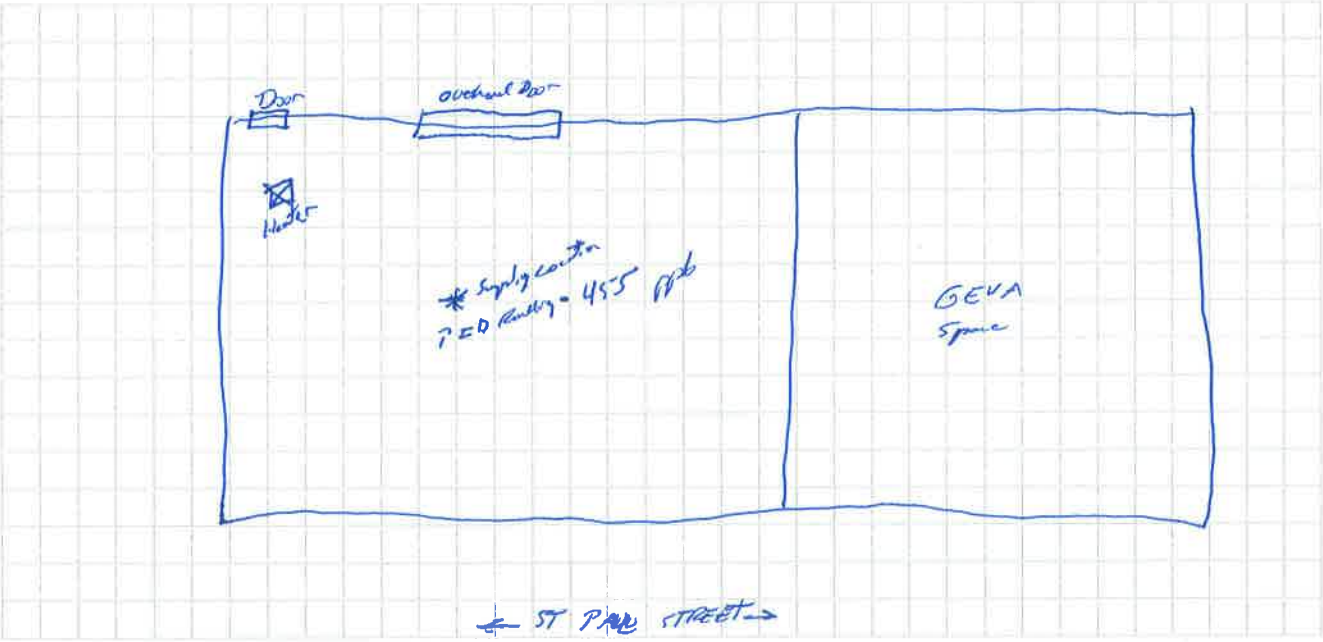
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:



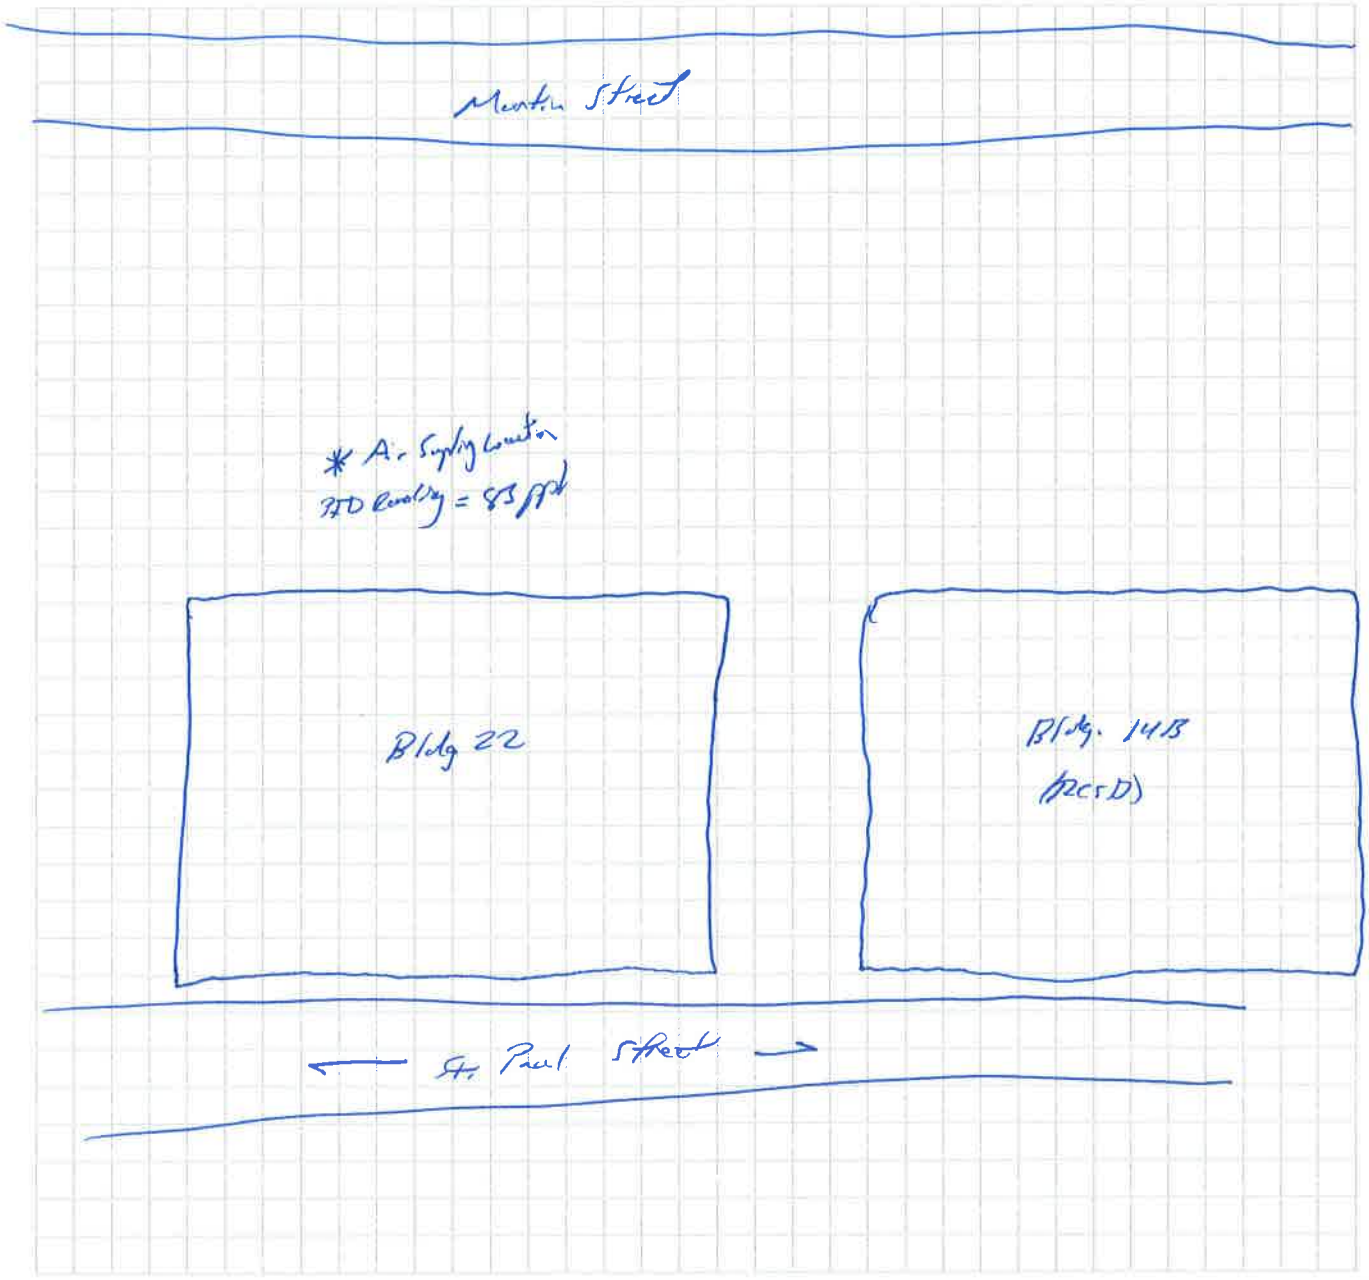
First Floor:



12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



← N

Wind Direction = SW

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae PPB Rae PID

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N
1st Floor	DuPont Primer x2	1-Gallon	U		15	Y
↓	Polyurethane Caulk Lubricant	5-Gallon	U		22	Y
	Zinsser Primer-Sealer	15 oz.	U		88	Y
	Service Pro - ATF	1-Qt.	U		48	Y
*	55-Gallon Drum - w/ waste under x4	55-Gallon	U		183	Y
*	55-Gallon Drum - w/ soil x2	55-Gallon	U		146	Y
*	55-Gallon Drum - w/ Unknown waste x11	55-Gallon	U		165	Y
	Diesel Fuel AST - (Empty)	500 Gal.	U		245	Y
	Unknown substance (soil?) in white bucket	5-Gal.	D		207	Y
	Sealer	5-Gal.	D		189	Y
↓	Kerosene AST	300 Gal	U		220	Y

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae, PPB Rae

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae PPB Rae

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

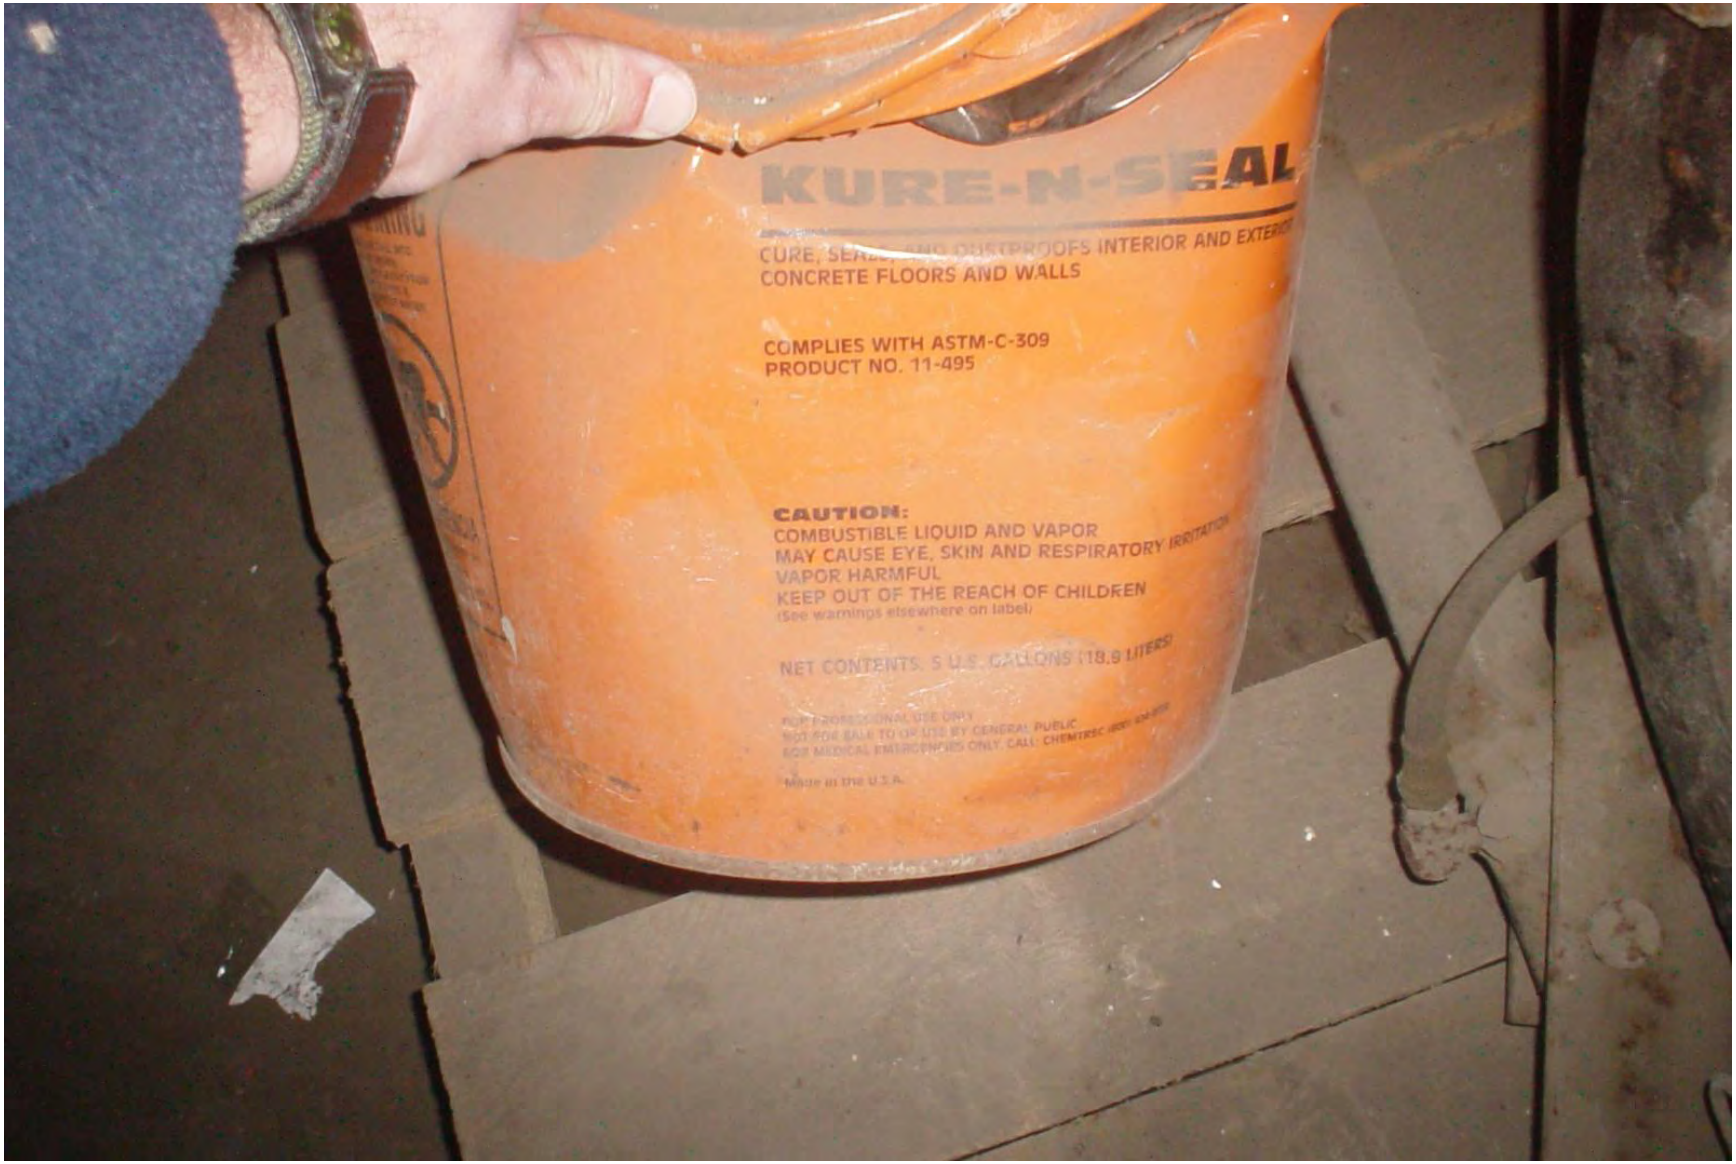
13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae, PPB Rae

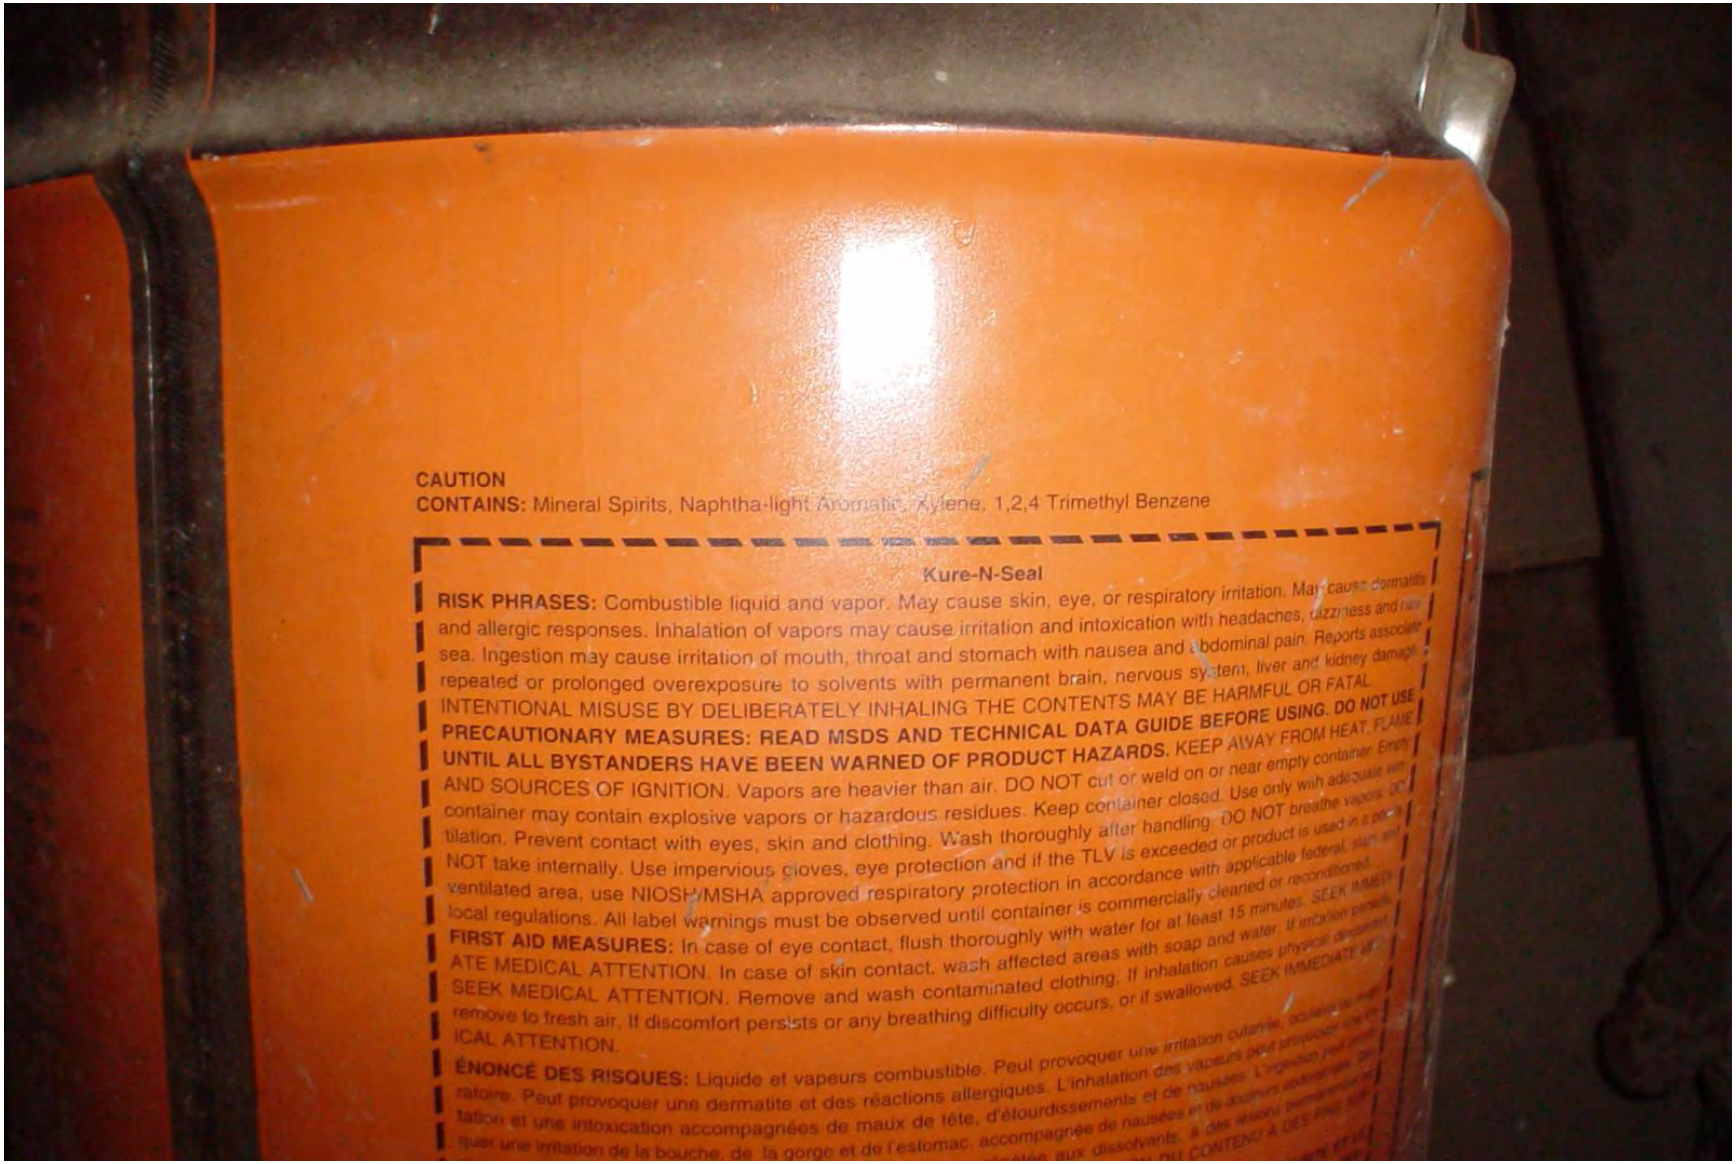
List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.



KURE-N-SEAL
CONCRETE FLOORS AND WALLS
COMPLIES WITH ASTM-C-309
PRODUCT NO. 11-495
CAUTION:
COMBUSTIBLE LIQUID AND VAPOR
MAY CAUSE EYE, SKIN AND RESPIRATORY IRRITATION
VAPOR HARMFUL
KEEP OUT OF THE REACH OF CHILDREN
(See warnings elsewhere on label)
NET CONTENTS: 5 U.S. GALLONS (18.9 LITERS)
Made in the U.S.A.



CAUTION
CONTAINS: Mineral Spirits, Naphtha-light Aromatic, Xylene, 1,2,4 Trimethyl Benzene

Kure-N-Seal

RISK PHRASES: Combustible liquid and vapor. May cause skin, eye, or respiratory irritation. May cause dermatitis and allergic responses. Inhalation of vapors may cause irritation and intoxication with headaches, dizziness and nausea. Ingestion may cause irritation of mouth, throat and stomach with nausea and abdominal pain. Reports associate repeated or prolonged overexposure to solvents with permanent brain, nervous system, liver and kidney damage. INTENTIONAL MISUSE BY DELIBERATELY INHALING THE CONTENTS MAY BE HARMFUL OR FATAL.
PRECAUTIONARY MEASURES: READ MSDS AND TECHNICAL DATA GUIDE BEFORE USING. DO NOT USE UNTIL ALL BYSTANDERS HAVE BEEN WARNED OF PRODUCT HAZARDS. KEEP AWAY FROM HEAT, FLAME AND SOURCES OF IGNITION. Vapors are heavier than air. DO NOT cut or weld on or near empty container. Empty container may contain explosive vapors or hazardous residues. Keep container closed. Use only with adequate ventilation. Prevent contact with eyes, skin and clothing. Wash thoroughly after handling. DO NOT breathe vapors. DO NOT take internally. Use impervious gloves, eye protection and if the TLV is exceeded or product is used in a poorly ventilated area, use NIOSH/MSHA approved respiratory protection in accordance with applicable federal, state and local regulations. All label warnings must be observed until container is commercially cleaned or reconditioned.
FIRST AID MEASURES: In case of eye contact, flush thoroughly with water for at least 15 minutes. SEEK IMMEDIATE MEDICAL ATTENTION. In case of skin contact, wash affected areas with soap and water. If irritation persists, SEEK MEDICAL ATTENTION. Remove and wash contaminated clothing. If inhalation causes physical discomfort, remove to fresh air. If discomfort persists or any breathing difficulty occurs, or if swallowed, SEEK IMMEDIATE MEDICAL ATTENTION.
ÉNONCÉ DES RISQUES: Liquide et vapeurs combustible. Peut provoquer une irritation cutanée, oculaire ou respiratoire. Peut provoquer une dermatite et des réactions allergiques. L'inhalation des vapeurs peut provoquer une irritation et une intoxication accompagnées de maux de tête, d'étourdissements et de nausées. L'ingestion peut provoquer une irritation de la bouche, de la gorge et de l'estomac, accompagnée de nausées et de douleurs abdominales. Des rapports associent [illegible] aux dissolvants, à des lésions permanentes au CONTENU A DES FINS [illegible]

Ethylene glycol	107-21-1	1 - 5 by weight
Nepheline Syenite	37244-96-5	1 - 5 by weight
Talc, Magnesium silicate hydrate	14807-96-6	5 - 10 by weight
Titanium dioxide	13463-67-7	10 - 30 by weight
Non hazardous ingredient(s)	No data	30 - 60 by weight
Styrene resin	No data	30 - 60 by weight

SECTION 3 - HAZARDS IDENTIFICATION

Emergency Overview:	Irritant.
Potential Health Effects:	
Eye:	May cause irritation.
Skin:	May cause irritation.
Inhalation:	Prolonged or excessive inhalation may cause respiratory tract irritation.
Ingestion:	May be harmful if swallowed. May cause vomiting.
Chronic Health Effects:	Prolonged or repeated contact may cause skin irritation.
Signs/Symptoms:	Overexposure may cause headaches and dizziness.
Target Organs:	Eyes. Skin. Respiratory system. Digestive system.
Aggravation of Pre-Existing Conditions:	None generally recognized.

SECTION 4 - FIRST AID MEASURES

Eye Contact:	Immediately flush eyes with plenty of water for 15 to 20 minutes. Get medical attention, if irritation or symptoms of overexposure persists.
Skin Contact:	Immediately wash skin with soap and plenty of water. Get medical attention if irritation develops or persists.
Inhalation:	If inhaled, remove to fresh air. If not breathing, give artificial respiration or give oxygen by trained personnel. Seek immediate medical attention.
Ingestion:	If swallowed, do NOT induce vomiting. Call a physician or poison control center immediately. Never give anything by mouth to an unconscious person.
Other First Aid:	Due to possible aspiration into the lungs, DO NOT induce vomiting if ingested. Provide a glass of water to dilute the material in the stomach. If vomiting occurs naturally, have the person lean forward to reduce the risk of aspiration.

SECTION 5 - FIRE FIGHTING MEASURES

Flash Point:	No Data
Lower Flammable/Explosive Limit:	Not applicable.
Upper Flammable/Explosive Limit:	Not applicable.
Extinguishing Media:	Use alcohol resistant foam, carbon dioxide, dry chemical, or water fog or spray when fighting fires involving this material.
Protective Equipment:	As in any fire, wear Self-Contained Breathing Apparatus (SCBA), MSHA/NIOSH (approved or equivalent) and full protective gear.

NFPA Ratings:

NFPA Flammability:	1
NFPA Health:	1
NFPA Reactivity:	0
NFPA Other:	NA

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personnel Precautions:	Use proper personal protective equipment as listed in section 8.
Environmental Precautions:	Avoid runoff into storm sewers, ditches, and waterways.
Spill Cleanup Measures:	Absorb spill with inert material (e.g., dry sand or earth), then place in a chemical waste container. Provide ventilation. Clean up spills immediately observing precautions in the protective equipment section.

SECTION 7 - HANDLING and STORAGE

Handling:	Use with adequate ventilation. Avoid breathing vapor and contact with eyes, skin and clothing.
Storage:	Store in a cool, dry, well ventilated area away from sources of heat, combustible materials, and incompatible substances. Keep container tightly closed when not in use.
Hygiene Practices:	Wash thoroughly after handling. Avoid contact with eyes and skin. Avoid inhaling vapor or mist.

SECTION 8 - EXPOSURE CONTROLS, PERSONAL PROTECTION - EXPOSURE GUIDELINES

Engineering Controls:	Use appropriate engineering control such as process enclosures, local exhaust ventilation, or other engineering controls to control airborne levels below recommended exposure limits. Good general ventilation should be sufficient to control airborne levels. Where such systems are not effective wear suitable personal protective equipment, which performs satisfactorily and meets OSHA or other recognized standards. Consult with local procedures for selection, training, inspection and maintenance of the personal protective equipment.
Eye/Face Protection:	Wear appropriate protective glasses or splash goggles as described by 29 CFR

	1910.133, OSHA eye and face protection regulation, or the European standard EN 166.
Skin Protection Description:	Chemical-resistant gloves and chemical goggles, face-shield and synthetic apron or coveralls should be used to prevent contact with eyes, skin or clothing.
Respiratory Protection:	A NIOSH approved air-purifying respirator with an organic vapor cartridge or canister may be permissible under certain circumstances where airborne concentrations are expected to exceed exposure limits. Protection provided by air purifying respirators is limited. Use a positive pressure air supplied respirator if there is any potential for an uncontrolled release, exposure levels are not known, or any other circumstances where air purifying respirators may not provide adequate protection.
Other Protective:	Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower.

EXPOSURE GUIDELINES

Ethylene glycol :	
Guideline ACGIH:	TLV-STEL: C 100 mg/m3 (Aerosol only)
Talc, Magnesium silicate hydrate :	
Guideline ACGIH:	TLV-TWA: 2 mg/m3 (Respirable)
Guideline OSHA:	OSHA-TWA: 20 mg/m3
Titanium dioxide :	
Guideline ACGIH:	TLV-TWA: 10 mg/m3
Guideline OSHA:	OSHA-TWA: 15 mg/m3

SECTION 9 - PHYSICAL and CHEMICAL PROPERTIES

Physical State Appearance:	Liquid.
Color:	White
Flash Point:	No Data
Boiling Point:	No Data
Melting Point:	No Data
Density:	10 - 12 Lbs./gal.
Vapor Density:	Greater than 1 (Air = 1).
pH:	8.5 to 9.5
Molecular Formula:	Mixture
Molecular Weight:	Mixture
Flash Point:	No Data
VOC Content:	Material VOC: 35 gm/l (Includes Water) Coating VOC.: 97 gm/l (Excludes Water)

SECTION 10 - STABILITY and REACTIVITY

Chemical Stability:	Stable under normal temperatures and pressures.
Hazardous Polymerization:	Not reported.
Conditions to Avoid:	Heat, flames, incompatible materials, and freezing or temperatures below 32 deg. F.
Incompatible Materials:	Oxidizing agents. Strong acids and alkalis.

SECTION 11 - TOXICOLOGICAL INFORMATION

Ethylene glycol :	
RTECS Number:	KW2975000
Eye:	Eye - Rabbit; Standard Draize Test. : 500 mg/24H; mild. Eye - Rabbit; Standard Draize Test. : 1440 mg/6H; Moderate. (RTECS)
Skin:	Skin - Rabbit; Open irritation : 555 mg; mild. (RTECS)
Inhalation:	Inhalation. - Rat LC: >200 mg/m3/4H; Details of toxic effects not reported other than lethal dose value. Inhalation. - Mouse LC: >200 mg/m3/2H; Details of toxic effects not reported other than lethal dose value. (RTECS)

Ingestion:	Ingestion - Rat LD50: 4700 mg/kg; Details of toxic effects not reported other than lethal dose value.. (RTECS)
RTECS Number:	WW2710000
Titanium dioxide :	
RTECS Number:	XR2275000
Skin:	Skin - Rabbit; Standard Draize Test. : 300 ug/3D; (Intermittent) mild. (RTECS)
Ingestion:	Ingestion - Rat TDLo: 60 gm/kg; Gastrointestinal - hypermotility, diarrhea Gastrointestinal - other changes. (RTECS)

SECTION 12 - ECOLOGICAL INFORMATION

Ecotoxicity:	No ecotoxicity data was found for the product.
Environmental Fate:	No environmental information found for this product.

SECTION 13 - DISPOSAL CONSIDERATIONS

Waste Disposal:	Consult with the US EPA Guidelines listed in 40 CFR Part 261.3 for the classifications of hazardous waste prior to disposal. Furthermore, consult with your state and local waste requirements or guidelines, if applicable, to ensure compliance. Arrange disposal in accordance to the EPA and/or state and local guidelines.

SECTION 14 - TRANSPORT INFORMATION

DOT UN Number:	No Data
DOT Hazard Class:	No Data

SECTION 15 - REGULATORY INFORMATION

Ethylene glycol :	
TSCA Inventory Status:	Listed
State Regulations:	Listed in the New Jersey State Right to Know List. Listed in the Pennsylvania State Hazardous Substances List.
Canada DSL:	Listed
Nepheline Syenite :	
TSCA Inventory Status:	Not listed
Canada DSL:	Listed
Talc, Magnesium silicate hydrate :	
TSCA Inventory Status:	Listed
State Regulations:	Listed in the New Jersey State Right to Know List. Listed in the Pennsylvania State Hazardous Substances List.
Canada DSL:	Listed
Titanium dioxide :	
TSCA Inventory Status:	Listed
State Regulations:	Listed in the New Jersey State Right to Know List. Listed in the Pennsylvania State Hazardous Substances List.
Canada DSL:	Listed
	WARNING: This product contains a chemical known to the state of California to cause cancer and birth defects or other reproductive harm.

SECTION 16 - ADDITIONAL INFORMATION

HMIS Fire Hazard:	1
HMIS Health Hazard:	1
HMIS Reactivity:	0
HMIS Personal Protection:	x

HMIS Other:	x
MSDS Creation Date:	06/26/2006
MSDS Revision Date:	09/08/2008
MSDS Revision Notes:	Quarterly formula update
MSDS Author:	Actio Corporation
Disclaimer:	This Health and Safety Information is correct to the best of our knowledge and belief at the date of its publication but we cannot accept liability for any loss, injury or damage which may result from its use. We shall ensure, so far as is reasonably practicable, that any revision of this Data Sheet is sent to all customers to whom we have directly supplied this substance, but must point out that it is the responsibility of any intermediate supplier to ensure that such revision is passed to the ultimate user. The information given in the Data Sheet is designed only as a guidance for safe handling, storage and the use of the substance. It is not a specification nor does it guarantee any specific properties. All chemicals should be handled only by competent personnel, within a controlled environment. Should further information be required, this can be obtained through the sales office whose address is at the top of this data sheet.
Trademark	The trademarks, service marks, graphics and logos used on this MSDS are registered or unregistered trademarks of BFHR Process Corporation. All Rights Reserved.

Copyright© 1996-2008 Actio Software Corporation. All Rights Reserved.

US State Right to Know Laws:
Tough Prime Black: This product contains carbon black, which is known by the state of California to cause cancer.

Canadian Regulations:
Canadian Environmental Protection Act (CEPA): All ingredients are listed on the DSL, or are exempted materials.
Canadian WHMIS Classification: D1A, D2A, D2B.
This product has been classified according to the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

SECTION 16 - OTHER INFORMATION

Legend : ACGIH: American Conference of Governmental Industrial Hygienists
IARC: International Agency for Research on Cancer
N/Ap: not applicable
N/Av: not available
NIOSH: National Institute of Occupational Safety and Health
NTP: National Toxicology Program
OSHA: Occupational Safety and Health Administration

DISCLAIMER OF LIABILITY

Every effort has been made to ensure that the safety information on this sheet is accurate, but because Rosco Laboratories, Inc. has no control over the conditions under which the product will be used, liability is limited exclusively to replacement or refund of the purchase price of this product. Except as stated herein, there are no express or implied warranties, including implied warranties of merchantability or fitness for a particular purpose. Rosco Laboratories, Inc. assumes no liability for injury or incidental or consequential damages arising out of storage, handling or use of this product.

Preparation Date: January 3, 2007

END OF DOCUMENT

Mutagenicity : Tough Prime Black: An ingredient in this product may cause mutagenic effects based on studies in laboratory animals.
Reproductive Effects : Not expected to have other reproductive effects.
Irritancy : Eyes, skin, respiratory system and digestive system.
Sensitization to material : Not expected to be a sensitizer.
Synergistic materials : None reported by the manufacturer.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer.
Important environmental characteristics : None known or reported by the manufacturer.
Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : See Section 7 (Handling and Storage) section for further details.
Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

SECTION 14 - TRANSPORTATION INFORMATION

Regulatory Information	UN Number	Shipping Name	Class	Packing Group	Label
TDG	None	Not regulated.	Not regulated	-None-	
TDG Additional Information	None.				
49CFR/DOT	None	Not regulated.	Not regulated	-None-	
49CFR/DOT Additional Information	None.				
ICAO/IATA	None	Not regulated.	Not regulated	-None-	
ICAO/IATA Additional Information	None.				
IMDG	None	Not regulated.	Not regulated	-None-	
IMDG Additional Information	None.				

SECTION 15 - REGULATORY INFORMATION

US Federal Information:
All ingredients are listed on the TSCA Inventory, or are exempted materials.
SARA Section 313: This material is not subject to SARA notification requirements, since it does not contain any Toxic Chemical Constituents above de minimus concentrations.

Odor : Slight odor.

pH : Not available.

Boiling point : 168.3 °C

Melting/Freezing point : Not available.

Vapor pressure (mmHg @ 20° C / 68° F) : 0.6 - 874

Vapor density (Air = 1) : Heavier than air.

Volatile organic Compounds (VOC's) (lbs/gal;g/l) : Tough Prime White : 0.89/107.44
Tough Prime Black:1.28/154.32

Viscosity : Not available.

Odor threshold : 2-butoxyethanol: 0.10 ppm (detectable) ; 0.35 ppm (recognizable)

Specific gravity : 1.28 (Tough Prime White)
1.09 (Tough Prime Black)

Coefficient of water/oil distribution : Not available.

Solubility in water : Soluble

Evaporation rate (n-Butyl acetate = 1) : Slower than n-butyl acetate

Volatiles (% by weight) : 46.6 (Tough Prime White)
72.0 (Tough Prime Black)

Special Remarks On Fire Hazards

: Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes. May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.

Hazardous polymerization : Will not occur.

Conditions to avoid : High temperatures. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Oxidizing agents. Do not freeze.

Materials To Avoid And Incompatibility

: See Section 7 (Handling and Storage) section for further details.

Hazardous decomposition products

: See hazardous combustion products.

SECTION 11 - TOXICOLOGICAL INFORMATION

Ingredients	LC_{50}(4hr) inh, rat	LD_{50} oral	LD_{50} dermal
Tough Prime Black			
2-Butoxyethanol (Glycol Ether)	450 ppm/4H (rat)	470 mg/kg (rat); 320 mg/kg (rabbit)	400 mg/kg (rabbit)
Carbon black	6750 mg/m3/4H (rat)	>15,400 mg/kg (rat)	>3000 mg/kg (rabbit)
Tough Prime White			
2-Butoxyethanol (Glycol Ether)	450 ppm/4H (rat)	470 mg/kg (rat); 320 mg/kg (rabbit)	400 mg/kg (rabbit)
Zinc oxide fume	N/Av	> 5000 mg/kg (rat); 7950 mg/kg (mouse)	N/Av

Toxicological data : Low order of toxicity for normal industrial handling.

Carcinogenic status : Contains 2-Butoxyethanol. 2-Butoxyethanol is classified as a confirmed animal carcinogen by ACGIH (Group A3).
Tough Prime Black: This product contains Carbon black, an IARC Group 2B carcinogen.

Reproductive effects : Not expected to have other reproductive effects.

Teratogenicity : Not expected to be a teratogen.

Hazardous combustion products
: Oxides of carbon, nitrogen, and sulphur. Oxygen. Acrid fumes, toxic gases.

Oxidizing properties : None reported by the manufacturer.

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions : All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots.

Environmental precautions : Prevent product from entering drains, sewers, waterways and soil.

Spill response/cleanup : Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment : Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures : Use with adequate ventilation. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest.

Storage requirements : Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue.

Incompatible materials : Oxidizing agents. Acids and bases. Aluminum. Ammonium salts. Other: magnesium, chlorinated rubber.

Special packaging materials
: Liquid-proof glass, plastic or non-corrodible metal containers are recommended.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures
: Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection : Use NIOSH/MSHA approved full-face respirator with an organic vapor cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection : Gloves impervious to the material are recommended.

Eye / face protection : Safety glasses with side-shields or chemical splash goggles.

Other protective equipment
: Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary.

General hygiene considerations
: Wash hands thoroughly after using this product, and before eating, drinking or smoking. Wash hands before breaks and at the end of workday.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state : Liquid.

Appearance : White liquid. (Tough Prime White)
Black liquid. (Tough Prime Black)

Eyes: Causes eye irritation. Prolonged or repeated exposure may be harmful to health. May cause conjunctivitis, irritation, and inflammation of mucous membranes. May cause burning sensation, redness and tearing (watering). Possible severe irritation.

Skin: Irritating to skin. Prolonged or repeated exposure may be harmful to health. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression.

Inhalation: Can cause irritation of the respiratory tract. Prolonged exposure to vapors may be harmful to health. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects : Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. Harmful: may cause lung damage if swallowed. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects : intoxication.

Potential chronic health effects

: Prolonged skin contact may defat the skin and produce dermatitis. Harmful by skin absorption. May cause central nervous system depression. Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis.

Medical conditions aggravated by overexposure

: Pre-existing skin, respiratory, renal or nervous system disorders.

Additional health hazards : None reported by the manufacturer.

Potential environmental effects

: None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation : If breathed in, move person into fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only. Seek immediate medical attention/advice.

Skin contact : Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention.

Eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If irritation persists, seek prompt medical attention.

Ingestion : Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician : Treat symptomatically.

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability

: Not flammable under normal conditions of handling. This product will not burn, due to its water content.

Flammability classification (OSHA 29 CFR 1910.1200)

: OSHA Combustible Liquid IIIB.

Flash point : Not applicable.

Flash point Method : Not applicable.

Auto-ignition temperature : Not available.

Lower flammable limit (% by vol.)

: Not applicable.

Upper flammable limit (% by vol.)

: Not applicable.

Suitable extinguishing media

: Dry chemical, foam, carbon dioxide and water fog.

Explosion data: Sensitivity to mechanical impact / static discharge

: Not expected to be sensitive to mechanical impact or static discharge.

Special fire-fighting procedures/equipment

: Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

White liquid. (Tough Prime White); Black liquid. (Tough Prime Black). Slight odor. Irritating to eyes, respiratory system and skin. Contains material which may be carcinogenic.

POTENTIAL HEALTH EFFECTS

Target organs : None reported by the manufacturer.

Routes of exposure : *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES

Potential acute health effects :

MATERIAL SAFETY DATA SHEET

prepared 09/23/08

HAZARDS IDENTIFICATION (ANSI Section 3)

Primary route(s) of exposure : Inhalation, skin contact, eye contact, ingestion.

Effects of overexposure :

Inhalation : Irritation of respiratory tract, lungs. Prolonged inhalation may lead to mucous membrane irritation, chest pain, coughing, difficulty of breathing, severe lung irritation or damage, pneumoconiosis.

Skin contact : Irritation of skin.

Eye contact : Irritation of eyes.

Ingestion : Ingestion may cause mouth and throat irritation, gastro-intestinal disturbances.

Medical conditions aggravated by exposure : Eye, skin, respiratory disorders, asthma-like conditions.

FIRST-AID MEASURES (ANSI Section 4)

Inhalation : Remove to fresh air. Restore and support continued breathing. Get emergency medical attention. Have trained person give oxygen if necessary. Get medical help for any breathing difficulty. Remove to fresh air if irritation causes eye watering, headaches, dizziness, or other discomfort.

Skin contact : Wash thoroughly with soap and water. If any product remains gently rub petroleum jelly, vegetable or mineral/baby oil onto skin. Repeated applications may be needed. Remove contaminated clothing. Wash contaminated clothing before re-use.

Eye contact : Flush immediately with large amounts of water, especially under lids for at least 15 minutes. If irritation or other effects persist, obtain medical treatment.

Ingestion : If swallowed, obtain medical treatment immediately.

FIRE-FIGHTING MEASURES (ANSI Section 5)

Fire extinguishing media : Dry chemical or foam water fog. Carbon dioxide. Closed containers may burst if exposed to extreme heat or fire. In closed tanks, water or foam may cause frothing or eruption.

Fire fighting procedures : Water may be used to cool and protect exposed containers. Firefighters should use full protective clothing, eye protection, and self-contained breathing apparatus.

Hazardous decomposition or combustion products : Carbon monoxide, carbon dioxide. Sodium oxide.

ACCIDENTAL RELEASE MEASURES (ANSI Section 6)

Steps to be taken in case material is released or spilled : Comply with all applicable health and environmental regulations. Eliminate all sources of ignition. Ventilate area. Evacuate all unnecessary personnel. Place collected material in proper container. Small spills - use absorbent to pick up residue and dispose of properly.

HANDLING AND STORAGE (ANSI Section 7)

Handling and storage : Store below 100f (38c). Keep from freezing.

Other precautions : Use only with adequate ventilation. Do not take internally. Keep out of reach of children. Avoid contact with skin and eyes, and breathing of vapors. Wash hands thoroughly after handling, especially before eating or smoking. Keep containers tightly closed and upright when not in use. Avoid conditions which result in formation of inhalable particles such as spraying or abrading (sanding) painted surfaces. If such conditions cannot be avoided, use appropriate respiratory protection as directed under exposure controls/personal protection.

EXPOSURE CONTROLS/PERSONAL PROTECTION (ANSI Section 8)

Respiratory protection : Control environmental concentrations below applicable exposure standards when using this material. When respiratory protection is determined to be necessary, use a NIOSH/MSHA (Canadian z94.4) Approved elastomeric sealing- surface facepiece respirator outfitted with organic vapor cartridges and paint spray (dust/mist) pre filters. Determine the proper level of protection by conducting appropriate air monitoring. Consult 29CFR1910.134 For selection of respirators (Canadian z94.4).

Ventilation : Provide dilution ventilation or local exhaust to prevent build-up of vapors.

Personal protective equipment : Eye wash, safety shower, safety glasses or goggles. Impervious gloves, impervious clothing.

STABILITY AND REACTIVITY (ANSI Section 10)

Under normal conditions : Stable see section 5 fire fighting measures

Materials to avoid : Oxidizers, acids, bases, hydrogen fluoride.

Conditions to avoid : Elevated temperatures, contact with oxidizing agent, freezing, sparks, open flame.

Hazardous polymerization : Will not occur

TOXICOLOGICAL INFORMATION (ANSI Section 11)

Supplemental health information : No additional effects are anticipated

Carcinogenicity : Inhalation of non-asbestiform cosmetic grade talc for 2 years at 6 and 18 mg/m3 produced clear evidence of carcinogenicity in female rats (lung and adrenal tumors) and some evidence of carcinogenicity in male rats (adrenal tumors). No evidence of carcinogenicity was demonstrated in male and female mice exposed under the same conditions. Microscopic examination of the lungs of rats and mice exposed to talc revealed additional exposure related effects primarily associated with the inflammatory response. Contains crystalline silica which is considered a hazard by inhalation. IARC has classified crystalline silica as carcinogenic to humans (group 1). Crystalline silica is also a known cause of silicosis, a noncancerous lung disease. The national toxicology program (NTP) has classified crystalline silica as a known human carcinogen. In a lifetime inhalation study, exposure to 250 mg/m3 titanium dioxide resulted in the development of lung tumors in rats. These tumors occurred only at dust levels that overwhelmed the animal's lung clearance mechanisms and were different from common human lung tumors in both type and location. The relevance of these findings to humans is unknown but questionable. The international agency for research on cancer (IARC) has classified titanium dioxide as possibly carcinogenic to humans (group 2b) based on inadequate evidence of carcinogenicity in humans and sufficient evidence of carcinogenicity in experimental animals.

Reproductive effects : No reproductive effects are anticipated

Mutagenicity : No mutagenic effects are anticipated

Teratogenicity : No teratogenic effects are anticipated

ECOLOGICAL INFORMATION (ANSI Section 12)

No ecological testing has been done by ICI paints on this product as a whole.

DISPOSAL CONSIDERATIONS (ANSI Section 13)

Waste disposal : Dispose in accordance with all applicable regulations. Avoid discharge to natural waters.

The information contained herein is based on data available at the time of preparation of this data sheet which ICI Paints believes to be reliable. However, no warranty is expressed or implied regarding the accuracy of this data. ICI Paints shall not be responsible for the use of this information, or of any product, method or apparatus mentioned and you must make your own determination of its suitability and completeness for your own use, for the protection of the environment, and the health and safety of your employees and the users of this material.
Complies with OSHA hazard communication standard 29CFR1910 1200.

REGULATORY INFORMATION (ANSI Section 15)

As of the date of this MSDS, all of the components in this product are listed (or are otherwise exempt from listing) on the TSCA inventory. This product has been classified in accordance with the hazard criteria of the CPR (controlled products regulations) and the MSDS contains all the information required by the CPR.

Physical Data (ANSI Sections 1, 9, and 14)

DEEP COLORS

MSDS Preparation Date: January 3, 2007

MATERIAL SAFETY DATA SHEET

SECTION 1 - PRODUCT AND COMPANY IDENTIFICATION

Product Name : **DEEP COLORS**

Deep Colors-Casein-White (No. 5551)
Deep Colors-Casein-Black (No. 5552)
Deep Colors Yellow Ochre (No. 5553)
Deep Colors Burnt Umber (No. 5554)
Deep Colors Raw Siena (No. 5555)
Deep Colors Burnt Sienna (No. 5556)
Deep Colors Raw Umber (No. 5557)
Deep Colors Van Dyke Brown (No. 5558)
Deep Colors Ultra Blue (No. 5559)
Deep Colors Red (No. 5560)
Deep Colors Dark Red (No. 5561)
Deep Colors Bright Red (No. 5562)
Deep Colors Orange (No. 5563)
Deep Colors Emerald (No. 5564)
Deep Colors Chrome Oxide Green (No. 5565)
Deep Colors Lemon Yellow (No. 5566)
Deep Colors Golden Yellow (No. 5567)
Deep Colors Purple (No. 5568)
Deep Colors Magenta (No. 5569)
Deep Colors Turquoise (No. 5570)
Deep Colors Dark Green (No. 5571)
Deep Colors Cerulean Blue (No. 5572)
Deep Colors Navy Blue (No. 5573)

Product Use : Paint

Chemical Family : Mixture.

Supplier's name and address:

Rosco Laboratories Inc.

52 Harbor View Avenue
Stamford, CT, United States
06902

24 Hr. Emergency Tel # : (800) 424-9300

HMIS Rating : *- Chronic hazard 0 - Minimal 1 - Slight 2 - Moderate 3 - Serious 4 - Severe

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Liquid. Color as per product name. No.5554:Contains a strong oxidizer. May cause skin and eye irritation. Contains material which can cause cancer.

POTENTIAL HEALTH EFFECTS

Target organs : None reported by the manufacturer.

Routes of exposure : *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES

Potential acute health effects :

Eyes: Causes eye irritation. May cause conjunctivitis, irritation, and inflammation of mucous membranes. May cause burning sensation, redness and tearing (watering). Prolonged contact may cause corrosive burns and eye damage.

Skin: Irritating to skin. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression.

Inhalation: Can cause irritation of the respiratory tract. Prolonged exposure to vapors may be harmful to health. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects: Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects: intoxication.

Potential chronic health effects

: Prolonged skin contact may defat the skin and produce dermatitis. Harmful by skin absorption. May cause central nervous system depression. Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis. Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis.

Medical conditions aggravated by overexposure

: None expected, when used as intended.

Additional health hazards : Exposure to respirable silica is not possible under normal conditions of use. Crystalline Silica has been classified as a carcinogen in dry powder form only.

Potential environmental effects

: None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation : If breathed in, move person into fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only. Seek immediate medical attention/advice.

Skin contact : Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention.

Eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If irritation persists, seek prompt medical attention.

Ingestion : Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician : Treat symptomatically.

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability

: Not flammable under normal conditions of handling. This product will not burn, due to its water content.

Flammability classification (OSHA 29 CFR 1910.1200)

: OSHA Combustible Liquid IIIB.

Flash point : Not available.

Flash point Method : Not applicable.

Auto-ignition temperature : Not available.

Lower flammable limit (% by vol.)

: Not applicable.

Upper flammable limit (% by vol.)

: Not applicable.

Suitable extinguishing media

: Dry chemical, foam, carbon dioxide and water fog.

Explosion data: Sensitivity to mechanical impact / static discharge

: Not expected to be sensitive to mechanical impact or static discharge.

Special fire-fighting procedures/equipment
: Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

Hazardous combustion products
: Oxides of carbon, nitrogen, and sulphur. Oxygen. Acrid fumes, toxic gases.

Oxidizing properties : Contains a strong oxidizer. Contact with combustible material may cause fire.

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions : All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots.

Environmental precautions : Prevent product from entering drains, sewers, waterways and soil.

Spill response/cleanup : Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment : Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures : Use with adequate ventilation. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest.

Storage requirements : Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue.

Incompatible materials : Oxidizing agents. Acids and bases. Aluminum. Ammonium salts. Other: magnesium, chlorinated rubber.

Special packaging materials
: Liquid-proof glass, plastic or non-corrodible metal containers are recommended.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures
: Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection : Use NIOSH/MSHA approved full face respirator with an organic vapor cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection : Wear impervious gloves, such as neoprene or nitrile rubber.

Eye / face protection : Safety glasses with side-shields or chemical splash goggles.

Other protective equipment
: Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary.

General hygiene considerations
: Wash hands thoroughly after using this product, and before eating, drinking or smoking. Wash hands before breaks and at the end of workday.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state : Liquid.

Appearance : Color as per product name

Odor : Not available.

Odor threshold : 2-butoxyethanol: 0.1 ppm (detectable) ; 0.35 ppm (recognizable) (No. 5563, 5566)

pH : Not available.

Boiling point : 100 °C

Specific gravity : 1.0-1.5

Melting/Freezing point : Not available.

Coefficient of water/oil distribution : Not available.

Vapor pressure (mmHg @ 20° C / 68° F) : 1.4 (No. 5551)
1.0 (No. 5552)
0.6 - 1.4 (No. 5554, 5559, 5557, 5564, 5558, 5561, 5562, 5570, 5572, 5571, 5573, 5565)
0.06 - 1.4 (No. 5560)
0.6-33 (No. 5563, 5566, 5567)
2.0 (No. 5568)
1.0 @ 35°C (No. 5553)
Not available. (No. 5553, 5556, 5569)

Solubility in water : soluble

Vapor density (Air = 1) : Heavier than air.

Evaporation rate (n-Butyl acetate = 1) : Slower than n-butyl acetate

Volatile organic Compounds (VOC's) (lbs/gal;g/l) : 0.24 / 28.00 (No. 5551, 5552, 5564, 5573)
0.41 / 50.00 (No. 5560, 5570, 5572, 5565)
0.25 / 30.51 (No. 5559, 5557)
0.30 / 36.84 (No. 5553)
0.28 / 34.22 (No. 5555)
0.33 / 40.09 (No. 5556)
0.19 / 23.56 (No. 5569)
0.36 / 43.81 (No. 5558)
0.46 / 55.63 (No. 5563)
0.49 / 59.44 (No. 5566)
0.39 / 47.32 (No. 5561)
0.18 / 22.78 (No. 5562)
0.62 / 74.86 (No. 5567)
0.42 / 50.67 (No. 5568)
0.73 / 87.93 (No. 5571)
0.22 / 26.78 (No.5554)

Volatiles (% by weight) : 46.69
No. 5554: 55.29

Viscosity : Not available.

Special Remarks On Fire Hazards : Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes. May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.

Hazardous polymerization : Will not occur.

Conditions to avoid : High temperatures. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Oxidizing agents. Do not freeze.

Materials To Avoid And Incompatibility

: See Section 7 (Handling and Storage) section for further details.

Hazardous decomposition products

: See hazardous combustion products.

SECTION 11 - TOXICOLOGICAL INFORMATION

Ingredients	LC_{50}(4hr) inh, rat	LD_{50} oral	LD_{50} dermal
Deep Colors Burnt Umber			
Manganese dioxide	N/Av	3478 mg/kg (rat)	N/Av

Silica, crystalline-quartz	N/Av	N/Av	N/Av
Deep Colors Van Dyke Brown			
Cristobalite	N/Av	N/Av	N/Av
Carbon black	6750 mg/m3/4H (rat)	>15,400 mg/kg (rat)	>3000 mg/kg (rabbit)
Silica, crystalline-quartz	N/Av	N/Av	N/Av
Deep Colors-Casein-Black, Deep Colors Yellow Ochre, Deep Colors Ultra Blue, Deep Colors Turquoise, Deep Colors Cerulean Blue			
Cristobalite	N/Av	N/Av	N/Av
Deep Colors-Casein-White (Cristobalite), Deep Colors Burnt Sienna, Deep Colors Red, Deep Colors Dark Red, Deep Colors Bright Red, Deep Colors Golden Yellow, Deep Colors Purple			
Cristobalite	N/Av	N/Av	N/Av
Deep Colors-Casein-White (Quartz)			
Silica, crystalline-quartz	N/Av	N/Av	N/Av

Toxicological data : Low order of toxicity for normal industrial handling.

Carcinogenic status : Contains Crystalline silica. Crystalline silica is classified as carcinogenic by IARC (Group 1), the ACGIH (Category A2) and the NTP (Group 1 - Known human carcinogen). Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis. Crystalline Silica has been classified as a carcinogen in dry powder form only. Exposure to respirable silica is not possible under normal conditions of use.
No. 5556, 5571, 5573: This product contains Carbon black, an IARC Group 2B carcinogen.
No. 5563, 5566:Contains 2-Butoxyethanol. 2-Butoxyethanol is classified as a confirmed animal carcinogen by ACGIH (Group A3).

Reproductive effects : Not expected to have other reproductive effects.
Teratogenicity : Not expected to be a teratogen.
Mutagenicity : Not expected to be mutagenic in humans.
Reproductive Effects : Not expected to have other reproductive effects.
Irritancy : Eyes, skin, respiratory system and digestive system.
Sensitization to material : Not expected to be a sensitizer.
Synergistic materials : None reported by the manufacturer.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer.
Important environmental characteristics
: None known or reported by the manufacturer.
Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : **See Section 7 (Handling and Storage) section for further details.**
Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

SECTION 14 - TRANSPORTATION INFORMATION

Regulatory Information	UN Number	Shipping Name	Class	Packing Group	Label
ICAO/IATA	None	Not regulated.	Not regulated	-None-	
ICAO/IATA Additional information	None.				
TDG	None	Not regulated.	Not regulated	-None-	
TDG Additional information	None.				
49CFR/DOT	None	Not regulated.	Not regulated	-None-	
49CFR/DOT Additional information	None.				
IMDG	None	Not regulated.	Not regulated	-None-	

MSDS Preparation Date: January 3, 2007

IMDG Additional Information	None.

SECTION 15 - REGULATORY INFORMATION

US Federal Information:

All ingredients are listed on the TSCA Inventory, or are exempted materials.
SARA Section 313: This material is not subject to SARA notification requirements, since it does not contain any Toxic Chemical Constituents above de minimus concentrations.

US State Right to Know Laws:

California Proposition 65: This product contains a chemical known to the State of California to cause cancer and/or reproductive harm. This product contains: Crystalline, silica. Carbon black is listed when found in unbound, airborne particles of respirable size.

Canadian Regulations:

Canadian Environmental Protection Act (CEPA): All ingredients are listed on the DSL, or are exempted materials.
Canadian WHMIS Classification: D2A, D2B.
This product has been classified according to the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

SECTION 16 - OTHER INFORMATION

Legend : ACGIH: American Conference of Governmental Industrial Hygienists
IARC: International Agency for Research on Cancer
N/Ap: not applicable
N/Av: not available
NIOSH: National Institute of Occupational Safety and Health
NTP: National Toxicology Program
OSHA: Occupational Safety and Health Administration

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Liquid Color as per product name. Causes skin and eye irritation. Contains material which can cause cancer.

POTENTIAL HEALTH EFFECTS

Target organs: Eyes, skin, respiratory system.

Routes of exposure: *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES

Potential acute health effects:

Eyes: Causes eye irritation. May cause conjunctivitis, irritation, and inflammation of mucous membranes. May cause burning sensation, redness and tearing (watering). Possible severe irritation.

Skin: Irritating to skin. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression.

Inhalation: Can cause irritation of the respiratory tract. Prolonged exposure to vapours may be harmful to health. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects: Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities. No. 5350: Pneumoconiosis, or "dusty lung" disease, may result from chronic exposure to any dust.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects: intoxication. No. 5350: Will irritate mouth and throat.

MSDS Preparation Date: January 3, 2007

Potential chronic health effects:

Prolonged skin contact may defat the skin and produce dermatitis. Harmful by skin absorption. May cause central nervous system depression. Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis. Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis.

Medical conditions aggravated by overexposure:

None expected, when used as intended.

Additional health hazards: Exposure to respirable silica is not possible under normal conditions of use. Crystalline Silica has been classified as a carcinogen in dry powder form only.

Potential environmental effects:

None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation: If breathed in, move person into fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only. Seek immediate medical attention/advice.

Skin contact: Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention.

Eye contact: Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If irritation persists, seek prompt medical attention.

Ingestion: Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician: Treat symptomatically.

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability:

Not flammable under normal conditions of handling. Toxic fumes may be released during a fire.

Flammability classification (OSHA 29 CFR 1910.1200):

OSHA Combustible Liquid IIIB

Flash point: Not available.

Flash point Method: Not applicable. **Auto-ignition temperature:** Not available

Lower flammable limit (% by vol.): Not applicable. **Upper flammable limit (% by vol.):** Not applicable.

Suitable extinguishing media:

Dry chemical, foam, carbon dioxide and water fog

Explosion data: Sensitivity to mechanical impact / static discharge:

Not expected to be sensitive to mechanical impact or static discharge

Special fire-fighting procedures/equipment:

Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

Hazardous combustion products:

Oxides of carbon, nitrogen, and sulfur. Oxygen. Acrid fumes, toxic gases.

Oxidizing properties: None expected

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions: All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots.

Environmental precautions: Prevent product from entering drains, sewers, waterways and soil.

MSDS Preparation Date: January 3, 2007

Spill response/cleanup: Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment: Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures: Use with adequate ventilation. Avoid breathing vapour or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest.

Storage requirements: Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue. Keep away from oxidizing materials.

Incompatible materials: Oxidizing agents. Acids and bases. Aluminum. Ammonium salts. Other: magnesium, chlorinated rubber. Strong acids, bases and oxidizing or reducing agents. No. 5350: Hydrofluoric acid

Special packaging materials:

Liquid-proof glass, plastic or non-corrodable metal containers are recommended.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures:

Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection: Use NIOSH/MSHA approved full-face respirator with an organic vapour cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection: Gloves impervious to the material are recommended

Eye / face protection: Safety glasses with side-shields or chemical splash goggles.

Other protective equipment:

Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary.

General hygiene considerations:

Wash hands thoroughly after using this product, and before eating, drinking or smoking. Wash hands before breaks and at the end of workday.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state	: Liquid.	**Appearance**	: Colour as per product name
Odour	: Not available	**Odour threshold**	: Not available
pH	: Not available.

45.95 (No. 5357)
46.7 (No. 5366)
49.39 (No. 5371)
47.01 (No. 5372)
59.95 (No. 5360)
60.08 (No. 5361)
59.34 (No. 5364)
61.6 (No. 5368)
61.04 (No. 5369)
59.82 (No. 5373)
56.51 (No. 5355)
62.16 (No. 5354, 5358)

Viscosity : Not available.

Special Remarks On Fire Hazards
: Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes. May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.
Hazardous polymerization : Will not occur.
Conditions to avoid : High temperatures. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Oxidizing agents. Do not freeze.
Materials To Avoid And Incompatibility
: See Section 7 (Handling and Storage) section for further details.
Hazardous decomposition products
: See hazardous combustion products.

Toxicological data : Low order of toxicity for normal industrial handling.
Carcinogenic status : Contains Crystalline silica. Crystalline silica is classified as carcinogenic by IARC (Group 1), the ACGIH (Category A2) and the NTP (Group 1 - Known human carcinogen). Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis. Crystalline Silica has been classified as a carcinogen in dry powder form only. Exposure to respirable silica is not possible under normal conditions of use.
No. 5354, 5358:This product contains Carbon black, an IARC Group 2B carcinogen.
Reproductive effects : Not expected to have other reproductive effects.
Teratogenicity : Not expected to be a teratogen.
Mutagenicity : Contains Carbon black. Carbon black is suspected of causing mutations in non-reproductive cells, based on animal data.
Reproductive Effects : Not expected to have other reproductive effects.
Irritancy : Eyes, skin, respiratory system and digestive system.
Sensitization to material : Not expected to be a sensitizer.
Synergistic materials : None reported by the manufacturer.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer.
Important environmental characteristics
: None known or reported by the manufacturer.
Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : See Section 7 (Handling and Storage) section for further details.

Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

SECTION 14 - TRANSPORTATION INFORMATION

Regulatory Information	UN Number	Shipping Name	Class	Packing Group	Label
TDG	None	Not regulated.	Not regulated	-None-	
TDG Additional Information	None.				
49CFR/DOT	None	Not regulated.	Not regulated	-None-

IMDG Additional Information	None.				

SECTION 15 - REGULATORY INFORMATION

US Federal Information:

All ingredients are listed on the TSCA Inventory, or are exempted materials.
SARA Section 313: This material is not subject to SARA notification requirements, since it does not contain any Toxic Chemical Constituents above de minimus concentrations.

US State Right to Know Laws:

California Proposition 65: This product contains a chemical known to the State of California to cause cancer and/or reproductive harm. This product contains: Crystalline silica, carbon black.

Canadian Regulations:

Canadian Environmental Protection Act (CEPA): All ingredients are listed on the DSL, or are exempted materials.
Canadian WHMIS Classification: D2A, D2B.
This product has been classified according to the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Liquid. Color as per product name. Causes skin and eye irritation. No. 5365: Contains material which can cause cancer.

POTENTIAL HEALTH EFFECTS

Target organs : Eyes, skin, respiratory system.

Routes of exposure : *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES

Potential acute health effects :

Eyes: Causes eye irritation. May cause conjunctivitis, irritation, and inflammation of mucous membranes. May cause burning sensation, redness and tearing (watering). Possible severe irritation.

Skin: Irritating to skin. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression.

Inhalation: Can cause irritation of the respiratory tract. Prolonged exposure to vapors may be harmful to health. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects: Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects: intoxication.

Potential chronic health effects
: Prolonged skin contact may defat the skin and produce dermatitis. Harmful by skin absorption. May cause central nervous system depression. Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis. No. 5365:Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis.

Medical conditions aggravated by overexposure
: None expected, when used as intended

Additional health hazards : No. 5365: Exposure to respirable silica is not possible under normal conditions of use. Crystalline Silica has been classified as a carcinogen in dry powder form only.

Potential environmental effects : None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation : If breathed in, move person into fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only. Seek immediate medical attention/advice.

Skin contact : Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention.

Eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If irritation persists, seek prompt medical attention.

Ingestion : Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician : Treat symptomatically.

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability : Not flammable under normal conditions of handling. Toxic fumes may be released during a fire.

Flammability classification (OSHA 29 CFR 1910.1200) : OSHA Combustible Liquid IIIB

Flash point : Not available.

Flash point Method : Not applicable.

Auto-ignition temperature : Not available.

Lower flammable limit (% by vol.) : Not applicable.

Upper flammable limit (% by vol.) : Not applicable.

Suitable extinguishing media : Dry chemical, foam, carbon dioxide and water fog.

Explosion data: Sensitivity to mechanical impact / static discharge : Not expected to be sensitive to mechanical impact or static discharge.

Special fire-fighting procedures/equipment : Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

Hazardous combustion products : Oxides of carbon, nitrogen, and sulphur. Oxygen. Acrid fumes, toxic gases, metal oxides

Oxidizing properties : None expected.

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions : All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots.

Environmental precautions : Prevent product from entering drains, sewers, waterways and soil.

Spill response/cleanup : Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment : Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures : Use with adequate ventilation. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest.

Storage requirements : Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue. Keep away from oxidizing materials.

Incompatible materials : Oxidizing agents. Acids and bases. Aluminum. Ammonium salts. Other: magnesium, chlorinated rubber. Strong acids, bases and oxidizing or reducing agents.

Special packaging materials : Liquid-proof glass, plastic or non-corrodible metal containers are recommended.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures : Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Use non-sparking equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection : Use NIOSH/MSHA approved full-face respirator with an organic vapor cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection : Gloves impervious to the material are recommended.

Eye / face protection : Safety glasses with side-shields or chemical splash goggles.

Other protective equipment : Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary.

General hygiene considerations : Wash hands thoroughly after using this product, and before eating, drinking or smoking. Wash hands before breaks and at the end of workday.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state : Liquid.

Appearance : Color as per product name

Odor : Not available.

Odor threshold : Not available.

pH : Not available.

Boiling point : 100 °C

Specific gravity : 1.2

Melting/Freezing point : Not available.

Coefficient of water/oil distribution : Not available.

Vapor pressure (mmHg @ 20° C / 68° F) : 1.4 (No. 5384, 5387)
0.5 (No. 5383)
1.0 (No. 5365)

Solubility in water : Soluble

Vapor density (Air = 1) : Heavier than air.

Evaporation rate (n-Butyl acetate = 1) : Slower than n-butyl acetate

Volatile organic Compounds (VOC's) (lbs/gal;g/l) : 0.80/96.14(No. 5384)
1.30/156.58 (No.5387)
2.13/256.67 (No.5383)
0.81/97.66 (No. 5365)

Volatiles (% by weight) : 58.14 (No. 5384)
67.56 (No. 5387)
70.56 (No.5383)
50.14 (No.5365)

Viscosity : Not available

Special Remarks On Fire Hazards
: Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.
Hazardous polymerization : Will not occur.
Conditions to avoid : High temperatures. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Oxidizing agents. Do not freeze.
Materials To Avoid And Incompatibility
: See Section 7 (Handling and Storage) section for further details.
Hazardous decomposition products
: See hazardous combustion products.

Copper	N/Av	N/Av	N/Av
Zinc dust	N/Av	N/Av	N/Av
Isopropyl alcohol	17,000 ppm/4H (rat)	4720 mg/kg (rat)	12,890 mg/kg (rabbit)
Off Broadway - Chrome Oxide			
Cristobalite	N/Av	N/Av	N/Av
Chromium oxide	N/Av	N/Av	N/Av
Off Broadway - Gold, Off Broadway - Antique Gold			
Zinc dust	N/Av	N/Av	N/Av
Copper	N/Av	N/Av	N/Av

Toxicological data : Low order of toxicity for normal industrial handling.
Carcinogenic status : No.5365:Contains Crystalline silica. Crystalline silica is classified as carcinogenic by IARC (Group 1), the ACGIH (Category A2) and the NTP (Group 1 - Known human carcinogen). Contains crystalline silica, prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis. Crystalline Silica has been classified as a carcinogen in dry powder form only. Exposure to respirable silica is not possible under normal conditions of use.
No. 5354, 5358:This product contains Carbon black, an IARC Group 2B carcinogen.
Reproductive effects : No. 5383, 5384, 5387: Contains a chemical or chemicals that may cause male and/or female reproductive toxicity. This product contains: copper
Teratogenicity : No.5383:Contains a chemical or chemicals which may be teratogenic. This product contains: isopropyl alcohol.
Mutagenicity : Not expected to be mutagenic in humans
Reproductive Effects : No. 5383, 5384, 5387: Contains a chemical or chemicals that may cause male and/or female reproductive toxicity. This product contains: copper.
Irritancy : Eyes, skin, respiratory system and digestive system
Sensitization to material : No. 5383, 5384, 5387: Contains a chemical or chemicals that may cause skin sensitization. This product contains: copper.
No.5383: Contains a chemical or chemicals that may cause skin sensitization. This product contains: isopropyl alcohol.
No.5365:Contains a chemical or chemicals that may cause skin sensitization. This product contains: Chromium oxide.

Synergistic materials : No.5383,5384,5387: Contains an ingredient which interacts with other trace elements when absorbed into the body, and competes with other metals. This product contains: Zinc.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer.
Important environmental characteristics
: None known or reported by the manufacturer.
Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : See Section 7 (Handling and Storage) section for further details.
Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

SECTION 14 - TRANSPORTATION INFORMATION

Regulatory Information	UN Number	Shipping Name	Class	Packing Group	Label
TDG	None	Not regulated	Not regulated	-None-	
TDG Additional information	None				
49CFR/DOT	None	Not regulated	Not regulated	-None-	
49CFR/DOT Additional information	None.				
ICAO/IATA	None	Not regulated	Not regulated	-None-	
ICAO/IATA Additional information	None.				
IMDG	None	Not regulated	Not regulated	-None-	
IMDG Additional information	None.				

SECTION 15 - REGULATORY INFORMATION

US Federal information:
All ingredients are listed on the TSCA Inventory, or are exempted materials.
SARA TITLE III: Sec. 313, Toxic Chemicals Notification, 40 CFR 372: This product may be subject to SARA notification requirements, since it contains Toxic Chemical constituents above their de minimus concentrations. This product contains:
Copper, Zinc (No. 5383, 5384, 5387).
CERCLA Reportable Quantity (RQ) (40 CFR 117.302): Copper (5,000 lbs/2270 kg); Zinc (1,000 lbs/ 454 kg) (No 5383, 5384, 5387)

US State Right to Know Laws:

California Proposition 65: This product contains a chemical known to the State of California to cause cancer and/or reproductive harm. This product contains: Crystalline silica, cristobalite (No. 5365).

Canadian Regulations:

Canadian Environmental Protection Act (CEPA): All ingredients are listed on the DSL, or are exempted materials
Canadian WHMIS Classification: D2A, D2B.
This product has been classified according to the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

SECTION 16 - OTHER INFORMATION

Legend : ACGIH: American Conference of Governmental Industrial Hygienists
IARC: International Agency for Research on Cancer
N/Ap: not applicable
N/Av: not available
NIOSH: National Institute of Occupational Safety and Health
NTP: National Toxicology Program
OSHA: Occupational Safety and Health Administration

MATERIAL SAFETY DATA SHEET

SECTION 1 - PRODUCT AND COMPANY IDENTIFICATION

Product Name : **OFF BROADWAY**
Off Broadway - Orange (No. 5363)
Off Broadway - Golden Yellow (No. 5367)
Off Broadway - Silver (No. 5385)

Product Use : Paint

Chemical Family : Mixture

Supplier's name and address:

Rosco Laboratories Inc.
52 Harbor View Avenue
Stamford, CT, United States
06902

24 Hr. Emergency Tel # : (800) 424-9300

HMIS Rating : *- Chronic hazard 0 - Minimal 1 - Slight 2 - Moderate 3 - Serious 4 - Severe

Health: 1 *Flammability:* 0 *Reactivity:* 0

WHMIS Classes:

TOXIC

SECTION 2 - COMPOSITION/INFORMATION ON INGREDIENTS

			ACGIH TLV		OSHA PEL	
Ingredients	**CAS #**	**% (weight)**	**TWA**	**STEL**	**PEL**	**STEL**
No hazardous ingredients	N/A-v	N/Av	N/Av	N/Av	N/Av	N/Av

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Liquid. Color as per product name. No special hazards exist with this product. As with any chemical substance, caution and care will prevent unnecessary accidents and safety problems. Read instructions on label before use.

POTENTIAL HEALTH EFFECTS

Target organs : None reported by the manufacturer.

Routes of exposure : *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES

Potential acute health effects :

Eyes: Causes eye irritation. May cause conjunctivitis, irritation, and inflammation of mucous membranes. May cause burning sensation, redness and tearing (watering). Possible severe irritation.

Skin: Irritating to skin. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression.

Inhalation: Can cause irritation of the respiratory tract. Prolonged exposure to vapors may be harmful to health. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects : Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects : Intoxication.

Potential chronic health effects
: Prolonged skin contact may defat the skin and produce dermatitis Harmful by skin absorption. May cause central nervous system depression. Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis.

Medical conditions aggravated by overexposure
: None expected, when used as intended.

Additional health hazards : None reported by the manufacturer

Potential environmental effects
: None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation : If breathed in, move person into fresh air If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only Seek immediate medical attention/advice

Skin contact : Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention.

Eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes If irritation persists, seek prompt medical attention.

Ingestion : Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician : Treat symptomatically

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability
: Not flammable under normal conditions of handling This product will not burn, due to its water content.

Flammability classification (OSHA 29 CFR 1910.1200)
: OSHA Combustible Liquid IIIB.

Flash point : Not available

Flash point Method : Not applicable

Auto-ignition temperature : Not available

Lower flammable limit (% by vol.)
: Not applicable

Upper flammable limit (% by vol.)
: Not applicable.

Suitable extinguishing media
: Dry chemical, foam, carbon dioxide and water fog.

Explosion data: Sensitivity to mechanical impact / static discharge
: Not expected to be sensitive to mechanical impact or static discharge

Special fire-fighting procedures/equipment
: Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

Hazardous combustion products
: Oxides of carbon, nitrogen, and sulphur Oxygen Acrid fumes, toxic gases.

Oxidizing properties : None reported by the manufacturer.

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions : All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots

Environmental precautions : Prevent product from entering drains, sewers, waterways and soil.

Spill response/cleanup : Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment : Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures : Use with adequate ventilation. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest. Keep out of direct sunlight.

Storage requirements : Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue. Store out of direct sunlight.

Incompatible materials : Oxidizing agents. Acids and bases Aluminum. Ammonium salts Other: magnesium, chlorinated rubber.

Special packaging materials
: Liquid-proof glass, plastic or non-corrodible metal containers are recommended.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures
: Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Use non-sparking equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection : Use NIOSH/MSHA approved full-face respirator with an organic vapor cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection : Wear impervious gloves, such as neoprene or nitrile rubber

Eye / face protection : Safety glasses with side-shields or chemical splash goggles.

Other protective equipment
: Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary.

General hygiene considerations
: Wash hands thoroughly after using this product, and before eating, drinking or smoking Wash hands before breaks and at the end of workday

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state : Liquid.

Appearance : Color as per product name

Odor : Not available

Odor threshold : Not available.

pH : Not available

Boiling point : 100°C

Specific gravity : 1.3 (No. 5363)
1.4 (No. 5367)
1 1 (No 5385)

Melting/Freezing point : Not available

Coefficient of water/oil distribution
: Not available

Vapor pressure (mmHg @ 29° C / 68° F)
: 760 (No. 5363, 5385)
0 06 - 760 (No 5367)

Solubility in water : Soluble

Vapor density (Air = 1) : Heavier than air.

Evaporation rate (n-Butyl acetate = 1)
: Slower than n-butyl acetate

MSDS Preparation Date: January 3, 2007

Volatile organic Compounds (VOC's) (lbs/gal;g/l) : 0.98 / 118.26 (No.5363)
1.11 / 133.27(No.5367)
1.22 / 147.40 (No.5385)

Volatiles (% by weight) : 49.34 (No. 5363)
48.05 (No. 5367)
74.44 (No. 5385)

Viscosity : Not available.

Special Remarks On Fire Hazards
: Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes. May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.
Hazardous polymerization : Will not occur.
Conditions to avoid : High temperatures. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Oxidizing agents. Do not freeze.

Materials To Avoid And Incompatibility
: See Section 7 (Handling and Storage) section for further details.

Hazardous decomposition products
: See hazardous combustion products.

SECTION 11 - TOXICOLOGICAL INFORMATION

	LC_{50}(4hr)	LD_{50}	
Ingredients	**inh. rat**	**oral**	**dermal**
No hazardous ingredients	N/Av	N/Av	N/Av

Toxicological data : Low order of toxicity for normal industrial handling.
Carcinogenic status : No components are listed as carcinogens by ACGIH, IARC, OSHA or NTP.
Reproductive effects : Not expected to have other reproductive effects.
Teratogenicity : Not expected to be a teratogen.
Mutagenicity : Not expected to be mutagenic in humans.
Reproductive Effects : Not expected to have other reproductive effects.
Irritancy : Irritating to eyes, respiratory system and skin.
Sensitization to material : Not expected to be a sensitizer.
Synergistic materials : None reported by the manufacturer.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer.
Important environmental characteristics
: None known or reported by the manufacturer.
Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : See Section 7 (Handling and Storage) section for further details.
Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

Rosco Laboratories Inc.

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Liquid. Color as per product name. Irritating to eyes, respiratory system and skin. Harmful if inhaled or swallowed.

POTENTIAL HEALTH EFFECTS

Target organs : Reproductive system. Eyes, skin, respiratory system. Kidneys

Routes of exposure : *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES

Potential acute health effects :

Eyes: Causes eye irritation. May cause conjunctivitis, irritation, and inflammation of mucous membranes. May cause burning sensation, redness and tearing (watering). Possible severe irritation.

Skin: Irritating to skin. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression. Possible toxic effects if absorbed.

Inhalation: Can cause irritation of the respiratory tract. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects: Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities. Very toxic in particulate form upon inhalation. May result in unconsciousness and possibly death.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects: Intoxication. May cause central nervous system depression.

Potential chronic health effects
: Prolonged skin contact may defat the skin and produce dermatitis. Harmful by skin absorption. May cause central nervous system depression. Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis. Contains a chemical which may cause kidney damage. This product contains: 2-butoxyethanol.May cause adverse reproductive effects. May cause skin sensitization.

Medical conditions aggravated by overexposure
: None expected, when used as intended

Additional health hazards : None reported by the manufacturer.

Potential environmental effects
: None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation : If breathed in, move person into fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only. Seek immediate medical attention/advice.

Skin contact : Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention.

Eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If irritation persists, seek prompt medical attention.

Ingestion : Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician : Treat symptomatically

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability
: Not flammable under normal conditions of handling. Toxic fumes may be released during a fire.

Flammability classification (OSHA 29 CFR 1910.1200)
: OSHA Combustible Liquid IIIB

Flash point : Not applicable

Flash point Method : Not applicable

Auto-ignition temperature : Not available.

Lower flammable limit (% by vol.)
: Not applicable

Upper flammable limit (% by vol.)
: Not applicable

Suitable extinguishing media
: Dry chemical, foam, carbon dioxide and water fog.

Explosion data: Sensitivity to mechanical impact / static discharge
: Not expected to be sensitive to mechanical impact or static discharge.

Special fire-fighting procedures/equipment
: Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

Hazardous combustion products
: Oxides of carbon, nitrogen, and sulphur. Oxygen. Acrid fumes, toxic gases, copper oxides.

Oxidizing properties : None expected

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions : All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots.

Environmental precautions : Prevent product from entering drains, sewers, waterways and soil.

Spill response/cleanup : Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment : Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures : Use with adequate ventilation. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest.

Storage requirements : Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue. Keep away from oxidizing materials.

Incompatible materials : Oxidizing agents. Acids and bases. Aluminum. Ammonium salts. Other: magnesium, chlorinated rubber. Strong acids, bases and oxidizing or reducing agents.

Special packaging materials
: Liquid-proof glass, plastic or non-corrodible metal containers are recommended.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures
: Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Use non-sparking equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection : Use NIOSH/MSHA approved full-face respirator with an organic vapor cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection : Gloves impervious to the material are recommended.

Eye / face protection : Safety glasses with side-shields or chemical splash goggles.

Other protective equipment
: Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary.

General hygiene considerations
: Wash hands thoroughly after using this product, and before eating, drinking or smoking. Wash hands before breaks and at the end of workday.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state : Liquid.

Appearance : Color as per product name

Odor : Not available.

Odor threshold : Not available.

pH : Not available

Boiling point : 100 May cause sensitization of susceptible persons °C
Specific gravity : 1.12
Melting/Freezing point : Not available.
Coefficient of water/oil distribution : Not available.
Vapor pressure (mmHg @ 20° C / 68° F) : 0.5
Solubility in water : Soluble
Vapor density (Air = 1) : Heavier than air.
Evaporation rate (n-Butyl acetate = 1) : Slower than n-butyl acetate
Volatile organic Compounds (VOC's) (lbs/gal;g/l) : 1.02 / 122.90
Volatiles (% by weight) : 65.16
Viscosity : Not available.
Special Remarks On Fire Hazards : Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes. May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.
Hazardous polymerization : Will not occur.
Conditions to avoid : High temperatures. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Oxidizing agents. Do not freeze.
Materials To Avoid And Incompatibility : See Section 7 (Handling and Storage) section for further details.
Hazardous decomposition products : See hazardous combustion products.

SECTION 11 - TOXICOLOGICAL INFORMATION

Ingredients	LC_{50}(4hr) inh, rat	LD_{50} oral	LD_{50} dermal
Copper	N/Av	N/Av	N/Av
2-Butoxyethanol (Glycol Ether)	450 ppm/4H (rat)	470 mg/kg (rat); 320 mg/kg (rabbit)	400 mg/kg (rabbit)

Toxicological data : Low order of toxicity for normal industrial handling.
Carcinogenic status : No components are listed as carcinogens by ACGIH, IARC, OSHA or NTP.
Reproductive effects : Contains a chemical or chemicals which may cause male and/or female reproductive toxicity. This product contains: copper.
Teratogenicity : Not expected to be a teratogen.
Mutagenicity : Not expected to be mutagenic in humans.
Reproductive Effects : Contains a chemical or chemicals which may cause male and/or female reproductive toxicity. This product contains: copper.
Irritancy : Eyes, skin, respiratory system and digestive system.
Sensitization to material : Contains a chemical or chemicals which may cause skin sensitization. This product contains: copper.
Synergistic materials : None known.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer.
Important environmental characteristics : None known or reported by the manufacturer.

Rosco Laboratories Inc.
52 Harbor View Avenue
Stamford, CT, USA, 06902
Phone: (203) 708 8900

Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : See Section 7 (Handling and Storage) section for further details.
Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

SECTION 14 - TRANSPORTATION INFORMATION

SECTION 15 - REGULATORY INFORMATION

US Federal Information:
All ingredients are listed on the TSCA Inventory, or are exempted materials.
SARA TITLE III: Sec. 313, Toxic Chemicals Notification, 40 CFR 372: This product may be subject to SARA notification requirements, since it contains Toxic Chemical constituents above their de minimus concentrations. This product contains: Copper.
CERCLA Reportable Quantity (RQ) (40 CFR 117.302): Copper (5,000 lbs/2270 kgs).

US State Right to Know Laws:
California Proposition 65: To the best of our knowledge, this product does not contain any chemicals known to the State of California to cause cancer or reproductive harm.

Canadian Regulations:
Canadian Environmental Protection Act (CEPA): All ingredients are listed on the DSL, or are exempted materials.
Canadian WHMIS Classification: D1A, D2A, D2B
This product has been classified according to the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

MATERIAL SAFETY DATA SHEET

SECTION 1 - PRODUCT AND COMPANY IDENTIFICATION

Product Name : **SUPERSATURATED**

Supersaturated Red (No. 5965)
Supersaturated Green Shoe Blue (No.5968)
Supersaturated Ultra Blue (No.5969)
Supersaturated Chrome Green (No.5971)
Supersaturated Emerald Green (No.5972)
Supersaturated Phthalo Green (No.5973)
Supersaturated Imperial Green (No. 5974)
Supersaturated Magenta (No.5975)
Supersaturated Brilliant Red (No. 5976)
Supersaturated Spectrum Red (No.5977)
Supersaturated Purple (No.5979)
Supersaturated Iron Red (No.5980)
Supersaturated Chrome Yellow (No.5981)
Supersaturated Yellow Ochre (No.5982)
Supersaturated Raw Sienna (No.5983)
Supersaturated Orange (No.5984)
Supersaturated Burnt Umber (No.5985)
Supersaturated Raw Umber (No.5986)
Supersaturated Burnt Sienna (No.5987)
Supersaturated Lemon Yellow (No.5988)
Supersaturated Prussian Blue (No.5990)
Supersaturated Navy Blue (No.5991)
Supersaturated Paynes Gray (No. 5992)
Supersaturated Leather (No.5993)
Supersaturated Grass Green (No.5994)
Supersaturated Cerulean Blue (No.5996)
Supersaturated Hunter Green (No.5997)
Supersaturated Van Dyke Brown (No.5998)
Supersaturated Base - Neutral (No.6001)
Supersaturated Base - White (No. 6002)
Supersaturated Base - Velour Black (No.6003)

Product Use : Paint

Chemical Family : Mixture

Supplier's name and address:

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Liquid. Multiple colors. Irritating to eyes, respiratory system and skin. Harmful if inhaled or swallowed Contains material which can cause cancer.

POTENTIAL HEALTH EFFECTS

Target organs : None reported by the manufacturer.

Routes of exposure : *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES

Potential acute health effects :

Eyes: Causes eye irritation. May cause conjunctivitis, irritation, and inflammation of mucous membranes May cause burning sensation, redness and tearing (watering). Possible severe irritation.

Skin: Irritating to skin. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression.

Inhalation: Can cause irritation of the respiratory tract. Prolonged exposure to vapors may be harmful to health. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects: Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects: intoxication.

Potential chronic health effects
: Prolonged skin contact may defat the skin and produce dermatitis. May cause allergic skin reaction Harmful by skin absorption. May cause central nervous system depression Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis. Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis.

Medical conditions aggravated by overexposure
: None expected, when used as intended

Additional health hazards : Exposure to respirable silica is not possible under normal conditions of use Crystalline Silica has been classified as a carcinogen in dry powder form only

Potential environmental effects
: None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation : If breathed in, move person into fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only. Seek immediate medical attention/advice.

Skin contact : Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention

Eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If irritation persists, seek prompt medical attention

Ingestion : Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician : Treat symptomatically.

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability
: Not flammable under normal conditions of handling This product will not burn, due to its water content.

Flammability classification (OSHA 29 CFR 1910.1200)
: OSHA Combustible Liquid IIIB

Flash point : Not applicable

Rosco Laboratories Inc.
52 Harbor View Avenue
Stamford, CT, United States, 06902
Phone: (203) 708 8900

Flash point Method : Not applicable **Auto-ignition temperature** : Not available
Lower flammable limit (% by vol.) : Not applicable **Upper flammable limit (% by vol.)** : Not applicable

Suitable extinguishing media
: Dry chemical, foam, carbon dioxide and water fog.

Explosion data: Sensitivity to mechanical impact / static discharge
: Not expected to be sensitive to mechanical impact or static discharge

Special fire-fighting procedures/equipment
: Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

Hazardous combustion products
: Oxides of carbon, nitrogen, and sulphur. Oxygen Acrid fumes, toxic gases.

Oxidizing properties : None known

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions : All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots.

Environmental precautions : Prevent product from entering drains, sewers, waterways and soil.

Spill response/cleanup : Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment : Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures : Use with adequate ventilation. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest.

Storage requirements : Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue.

Incompatible materials : Oxidizing agents Acids and bases Aluminum Ammonium salts Other: magnesium, chlorinated rubber.

Special packaging materials
: Liquid-proof glass, plastic or non-corrodible metal containers are recommended

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures
: Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection : Use NIOSH/MSHA approved full-face respirator with an organic vapor cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection : Wear impervious gloves, such as neoprene or nitrile rubber.

Eye / face protection : Safety glasses with side-shields or chemical splash goggles.

Other protective equipment

: Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary

General hygiene considerations

: Wash hands thoroughly after using this product, and before eating, drinking or smoking. Wash hands before breaks and at the end of workday.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state : Liquid.

Appearance : Liquid in multiple colors.

Odor : Not available.

Odor threshold : Not available.

pH : Not available.

Boiling point : 100 °C (No. 5992)
100 - 187.2 °C (No.5968, 5972, 5991, 5994, 5997)
100 - 165°C (No.5973)
100 - 245.6 (No.5981)
100-190 (Nos. 5974, 5976)

Specific gravity : 1.0-1.4

Melting/Freezing point : Not available.

Coefficient of water/oil distribution : Not available.

Vapor pressure (mmHg @ 20° C / 68° F) : 0.6 -760
0.06 - 760 (No.5981)
760 (No.5983)
0.2 -760 (No.5990)
17 (Nos. 5976, 5974, 5992)

Solubility in water : Soluble

Vapor density (Air = 1) : Heavier than air

Evaporation rate (n-Butyl acetate = 1) : Slower than n-butyl acetate

Volatile organic Compounds (VOC's) (lbs/gal;g/l) : 0.80 -0.85 / 95.00-102.58 (except as noted below)

0.22 (No. 5992)
0.17 / 20.84 (No.5979)
0.36 / 44.15 (No.5990)
0.77 / 92.46 (No.6001)
0.93 / 111.27 (No.6002)
1.04 / 125.59 (No.5980)
1.05 / 126.3 (No.5987)
1.12 - 1.18 / 134.42 - 142.59 (No.5968, 5981, 5986)
1.21 / 145.51 (No.5994)
1.31 / 157.86 (No.5972)

Volatiles (% by weight) : 61.17 (except as noted below)

47.31 (No.5971)
65.03 (No.5977)
52.3 (No. 5980)
53.92 (No.5982)
59.57 (No.5983)
50.65 (No.5985)
63.29 (No.5986)
57.65 (No.5988)
61.97 (No.5993)
61.73 (No.5996)
53.95 (No.5997)
55.48 (No. 5998)
47.72 (No.6001-6003)
60.52 (No. 5974)
60.87 (No. 5976)
50.66 (No. 5992)

Viscosity : Not available.

Special Remarks On Fire Hazards

: Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes. May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.

Rosco Laboratories Inc.
52 Harbor View Avenue
Stamford, CT, United States, 06902
Phone: (203) 708 8900

Hazardous polymerization : Will not occur.

Conditions to avoid : High temperatures Keep away from excessive heat, open flames, sparks and other possible sources of ignition Oxidizing agents Do not freeze.

Materials To Avoid And Incompatibility

: See Section 7 (Handling and Storage) section for further details.

Hazardous decomposition products

: See hazardous combustion products.

SECTION 11 - TOXICOLOGICAL INFORMATION

Ingredients	LC_{50}(4hr) inh. rat	LD_{50} oral	LD_{50} dermal
Supersaturated - Brilliant Red			
Silica, crystalline quartz, respirable dust	N/Av	500 mg/kg	N/Av
Supersaturated - Paynes Gray			
Iron oxide red	N/Av	>10000 mg/kg	N/Av
Supersaturated - Paynes Gray **Supersaturated - Imperial Green**			
Carbon black	450 ppm/4H (rat)	470 mg/kg (rat); 320 mg/kg (rabbit)	400 mg/kg (rabbit)
Supersaturated Base - Velour Black			
Silica, crystalline-cristobalite	N/Av	N/Av	N/Av
Supersaturated Burnt Umber			
Manganese dioxide	N/Av	3478 mg/kg (rat)	N/Av
Supersaturated Chrome Green			
Chrome oxide	N/Av	N/Av	N/Av
Supersaturated Chrome Yellow			
Silica, crystalline-cristobalite	N/Av	N/Av	N/Av
Glycol ether	N/Av	12,565 mg/kg (rat)	11,890 mg/kg (rabbit)
Supersaturated Green Shoe Blue, Supersaturated Emerald Green, Supersaturated Navy Blue, Supersaturated Grass Green			
Propylene glycol	N/Av	20,000 mg/kg (rat)	20,800 mg/kg (rabbit)
Supersaturated Hunter Green			
Silica, crystalline-cristobalite	N/Av	N/Av	N/Av
Supersaturated Lemon Yellow, Supersaturated Van Dyke Brown, Supersaturated Base - Neutral			
Silica, crystalline-quartz	N/Av	N/Av	N/Av
Supersaturated Phthalo Green			
1-Propanol, 2-amino-2-methyl-	N/Av	N/Av	N/Av
Supersaturated White			
No hazardous ingredients	N/Av	N/Av	N/Av

Toxicological data : Low order of toxicity for normal industrial handling

Carcinogenic status : Contains crystalline silica. Crystalline silica is classified as carcinogenic by IARC (Group 1), the ACGIH (Category A2) and the NTP (Group 1 - Known human carcinogen). Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis. Crystalline Silica has been classified as a carcinogen in dry powder form only. Exposure to respirable silica is not possible under normal conditions of use.
Nos. 5974, 5992, 5997, 6003: This product contains Carbon black, an IARC Group 2B carcinogen.

Reproductive effects : Not expected to have other reproductive effects.

Teratogenicity : Not expected to be a teratogen.

Mutagenicity : Nos. 5974, 5992, 5997, 6003: Contains Carbon black. Carbon black is suspected of causing mutations in non-reproductive cells, based on animal data.

Reproductive Effects : Not expected to have other reproductive effects.

Irritancy : Eyes, skin, respiratory system and digestive system.

Sensitization to material : Contains a chemical or chemicals which may cause skin sensitization. This product contains: Propylene glycol (No.5997, 5968, 5972, 5981, 5894); Chromium oxide (No.5971).

Synergistic materials : None reported by the manufacturer.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer.

Important environmental characteristics : None known or reported by the manufacturer.

Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : See Section 7 (Handling and Storage) section for further details.

Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

SECTION 14 - TRANSPORTATION INFORMATION

Regulatory Information	UN Number	Shipping Name	Class	Packing Group	Label
TDG	None	Not regulated.	Not regulated.	-None-	
TDG Additional information	None.				
49CFR/DOT	None	Not regulated.	Not regulated.	-None-	
49CFR/DOT Additional information	None.				
ICAO/IATA	None	Not regulated.	Not regulated.	-None-	
ICAO/IATA Additional information	None.				
IMDG	None	Not regulated.	Not regulated.	-None-	

IMDG Additional information None.

SECTION 15 - REGULATORY INFORMATION

US Federal Information:
All ingredients are listed on the TSCA Inventory, or are exempted materials.
SARA Section 313: This material is not subject to SARA notification requirements, since it does not contain any Toxic Chemical Constituents above de minimus concentrations.

US State Right to Know Laws:
California Proposition 65: This product contains a chemical known to the State of California to cause cancer and/or reproductive harm. This product contains: Crystalline, silica. Carbon black is listed when found in unbound, airborne particles of respirable size. (No.5997)

Canadian Regulations:
Canadian Environmental Protection Act (CEPA): All ingredients are listed on the DSL, or are exempted materials.
Canadian WHMIS Classification: D2A, D2B; D2B (No.6002).
This product has been classified according to the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

SECTION 16 - OTHER INFORMATION

Legend : ACGIH: American Conference of Governmental Industrial Hygienists
IARC: International Agency for Research on Cancer
N/Ap: not applicable
N/Av: not available
NIOSH: National Institute of Occupational Safety and Health
NTP: National Toxicology Program

SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Liquid. Color as per product name. Irritating to eyes, respiratory system and skin. Harmful if inhaled or swallowed. Contains material which can cause cancer.

POTENTIAL HEALTH EFFECTS

Target organs : None reported by the manufacturer.
Routes of exposure : *Inhalation:* YES *Skin Absorption:* YES *Skin & Eyes:* YES *Ingestion:* YES
Potential acute health effects :

Eyes: Causes eye irritation. May cause conjunctivitis, irritation, and inflammation of mucous membranes. May cause burning sensation, redness and tearing (watering). Possible severe irritation.

Skin: Irritating to skin. Possible irritation, defatting or dermatitis (rash). Components of the product may be absorbed into the body through the skin. May cause central nervous system depression.

Inhalation: Can cause irritation of the respiratory tract. Prolonged exposure to vapors may be harmful to health. If higher concentrations are inhaled, additional symptoms may include coughing, shortness of breath, headache, nausea, vomiting, dizziness, drowsiness and other central nervous system effects. May cause mucous membrane irritation. Other adverse effects: Asphyxia. Severe lung irritation or lung damage, loss of appetite. Sanding and grinding dusts may be harmful if inhaled. Contains particles which may cause lung damage if inhaled in large quantities. Very toxic in particulate form upon inhalation.

Ingestion: Lung aspiration hazard. This product may be aspirated (inhaled) into the lungs during ingestion. May cause lung inflammation. May cause mucous membrane irritation. Ingestion may cause symptoms similar to inhalation. May cause gastrointestinal irritation. Gastrointestinal irritation may include abdominal pain, nausea, diarrhea and vomiting. Other adverse effects: intoxication. May cause central nervous system depression.

Potential chronic health effects

: Prolonged skin contact may defat the skin and produce dermatitis. May cause allergic skin reaction. Harmful by skin absorption. May cause central nervous system depression. Prolonged inhalation of vapors may cause lung damage, including chronic bronchitis. Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis. Contains a chemical which may cause kidney damage. This product contains: 2-butoxyethanol

Medical conditions aggravated by overexposure

: None expected, when used as intended.

Additional health hazards : Exposure to respirable silica is not possible under normal conditions of use. Crystalline Silica has been classified as a carcinogen in dry powder form only

Potential environmental effects

: None reported by the manufacturer.

SECTION 4 - FIRST AID MEASURES

Inhalation : If breathed in, move person into fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen by qualified medical personnel only. Seek immediate medical attention/advice.

Skin contact : Flush with plenty of water. Wash off with soap and plenty of water. Remove and wash contaminated clothing before re-use. If irritation persists, seek prompt medical attention.

Eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If irritation persists, seek prompt medical attention.

Ingestion : Call a physician or Poison Control Centre immediately. Do NOT induce vomiting. Guard against aspiration into lungs by having the individual turn on their left side.

Notes For Physician : Treat symptomatically.

SECTION 5 - FIRE FIGHTING MEASURES

Fire hazards/conditions of flammability

: Not flammable under normal conditions of handling. This product will not burn, due to its water content.

Flammability classification (OSHA 29 CFR 1910.1200)

: OSHA Combustible Liquid IIIB.

Flash point : Not applicable.

Flash point Method : Not applicable. **Auto-ignition temperature** : Not available.

Lower flammable limit (% by vol.) **Upper flammable limit (% by vol.)**

: Not applicable : Not applicable

Suitable extinguishing media

: Dry chemical, foam, carbon dioxide and water fog.

Explosion data: Sensitivity to mechanical impact / static discharge

: Not expected to be sensitive to mechanical impact or static discharge.

Special fire-fighting procedures/equipment

: Firefighters should wear an approved full-face, self-contained breathing apparatus (SCBA) and impervious clothing. Water may be ineffective on fire, but may be helpful in cooling unburned containers. Do not use a solid water stream as it may scatter and spread fire. If water is used, fog nozzles are preferable.

Hazardous combustion products

: Oxides of carbon, nitrogen, and sulphur. Oxygen. Acrid fumes, toxic gases.

Rosco Laboratories Inc.
52 Harbor View Avenue
Stamford, CT, USA, 06902
Phone: (203) 708 8900

Oxidizing properties : None expected.

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Personal precautions : All persons dealing with clean-up should wear the appropriate protective equipment including self-contained breathing apparatus. Avoid breathing vapors. Wear resistant clothing and boots.

Environmental precautions : Prevent product from entering drains, sewers, waterways and soil.

Spill response/cleanup : Eliminate all ignition sources if safe to do so. Ventilate area of release. Use only non-sparking tools and equipment in the clean-up process. Contain and absorb spilled liquid with non-combustible, inert absorbent material (e.g. sand), then place absorbent material into a container for later disposal (see Section 13).

Containment : Should not be released into the environment. Recover free liquid or cover with inert absorbent material and place into appropriate container for disposal.

SECTION 7 - HANDLING AND STORAGE

Safe Handling procedures : Use with adequate ventilation. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Wash hands thoroughly after using this product, and before eating, drinking or smoking. Avoid breathing of dust created by cutting, sanding, or grinding. Sanding and grinding dusts may be harmful if inhaled. Do not re-use empty containers. Do not puncture container. Keep in properly labeled containers. Wear suitable protective equipment. Do not ingest.

Storage requirements : Store in a cool, dry, well-ventilated area. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Do not freeze. Keep container tightly closed when not in use. Store in upright position only. Keep out of the reach of children. Empty product containers may contain hazardous product residue.

Incompatible materials : Oxidizing agents. Acids and bases. Aluminum. Ammonium salts. Other: magnesium, chlorinated rubber.

Special packaging materials

: Liquid-proof glass, plastic or non-corrodible metal containers are recommended.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

Ventilation and engineering measures

: Use general or local exhaust ventilation to maintain air concentrations below recommended exposure limits. Use explosion-proof equipment. Discharge exhaust only in area away from ignition sources.

Respiratory protection : Use NIOSH/MSHA approved full-face respirator with an organic vapor cartridge if the recommended exposure limit is exceeded. In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134) or CSA Z94.4-02.

Skin protection : Gloves impervious to the material are recommended.

Eye / face protection : Safety glasses with side-shields or chemical splash goggles.

Other protective equipment

: Emergency showers and eyewash facilities should be nearby. Depending on conditions of use, safety shoes and additional protective clothing may also be necessary.

General hygiene considerations

: Wash hands thoroughly after using this product, and before eating, drinking or smoking. Wash hands before breaks and at the end of workday.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state	: Liquid.	**Appearance**	: Color as per product name
Odor	: Not available.	**Odor threshold**	: Not available.
pH	: Not available.		
Boiling point	: 168.3 - 187.2 °C	**Specific gravity**	: 1.0-1.4
Melting/Freezing point	: Not available.	**Coefficient of water/oil distribution**	

: Not available.

Vapor pressure (mmHg @ 20° C / 68° F) : 0.6 -760

Solubility in water : Soluble

Vapor density (Air = 1) : Heavier than air.

Evaporation rate (n-Butyl acetate = 1) : Slower than n-butyl acetate

Volatile organic Compounds (VOC's) (lbs/gal;g/l) : 1.52 / 182.73

Volatiles (% by weight) : 61.17

Viscosity : Not available.

Special Remarks On Fire Hazards

: Not flammable under normal conditions of use. This product will not burn, due to its water content. May spatter if the temperature exceeds the boiling point. Vapors may irritate eyes. May irritate skin.

SECTION 10 - REACTIVITY AND STABILITY DATA

Stability and reactivity : Stable under normal conditions.

Hazardous polymerization : Will not occur.

Conditions to avoid : High temperatures. Keep away from excessive heat, open flames, sparks and other possible sources of ignition. Oxidizing agents. Do not freeze.

Materials To Avoid And Incompatibility

: See Section 7 (Handling and Storage) section for further details.

Hazardous decomposition products

: See hazardous combustion products

SECTION 11 - TOXICOLOGICAL INFORMATION

Ingredients	LC_{50}(4hr) inh, rat	LD_{50} oral	LD_{50} dermal
2-Butoxyethanol	450 ppm/4H (rat)	470 mg/kg (rat); 320 mg/kg (rabbit)	400 mg/kg (rabbit)
Silica, crystalline-quartz	N/Av	N/Av	N/Av
Silica, crystalline-cristobalite	N/Av	N/Av	N/Av
Propylene glycol	N/Av	20,000 mg/kg (rat)	20,800 mg/kg (rabbit)

Toxicological data : Low order of toxicity for normal industrial handling.

Carcinogenic status : Contains Crystalline silica. Crystalline silica is classified as carcinogenic by IARC (Group 1), the ACGIH (Category A2) and the NTP (Group 1 - Known human carcinogen). Contains crystalline silica; prolonged exposure by inhalation of particles can cause serious lung damage, including silicosis. Crystalline Silica has been classified as a carcinogen in dry powder form only. Exposure to respirable silica is not possible under normal conditions of use.
Contains 2-Butoxyethanol. 2-Butoxyethanol is classified as a confirmed animal carcinogen by ACGIH (Group A3).

Reproductive effects : Not expected to have other reproductive effects.

Teratogenicity : Not expected to be a teratogen.

Mutagenicity : Not expected to be mutagenic in humans.

Reproductive Effects : Not expected to have other reproductive effects.

Irritancy : Eyes, skin, respiratory system and digestive system.

Sensitization to material : Contains a chemical or chemicals which may cause skin sensitization. This product contains: Propylene glycol.

Synergistic materials : None reported by the manufacturer.

SECTION 12 - ECOLOGICAL INFORMATION

Environmental effects : None known or reported by the manufacturer

Rosco Laboratories Inc.
52 Harbor View Avenue
Stamford, CT, USA, 06902
Phone: (203) 708 8900

Important environmental characteristics

: None known or reported by the manufacturer

Ecotoxicological : No data is available on the product itself.

SECTION 13 - DISPOSAL CONSIDERATIONS

Handling for Disposal : See Section 7 (Handling and Storage) section for further details.

Methods of Disposal : Dispose in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules. Do not puncture or incinerate. Contact waste disposal services.

SECTION 14 - TRANSPORTATION INFORMATION

Regulatory Information	UN Number	Shipping Name	Class	Packing Group	Label
TDG	None	Not regulated.	Not regulated	-None-	
TDG Additional information	None.				
49CFR/DOT	None	Not regulated.	Not regulated	-None-	
49CFR/DOT Additional information	None.				
ICAO/IATA	None	Not regulated.	Not regulated	-None-	
ICAO/IATA Additional information	None.				
IMDG	None	Not regulated.	Not regulated	-None-	
IMDG Additional information	None.				

SECTION 15 - REGULATORY INFORMATION

US Federal Information:

All ingredients are listed on the TSCA Inventory, or are exempted materials
SARA Section 313: This material is not subject to SARA notification requirements, since it does not contain any Toxic Chemical Constituents above de minimus concentrations.

US State Right to Know Laws:

California Proposition 65: This product contains a chemical known to the State of California to cause cancer and/or reproductive harm. This product contains: Crystalline, silica.

Canadian Regulations:

Canadian Environmental Protection Act (CEPA): All ingredients are listed on the DSL, or are exempted materials.
Canadian WHMIS Classification: D1A, D2A, D2B.
This product has been classified according to the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

SECTION 16 - OTHER INFORMATION

Legend : ACGIH: American Conference of Governmental Industrial Hygienists
IARC: International Agency for Research on Cancer
N/Ap: not applicable
N/Av: not available
NIOSH: National Institute of Occupational Safety and Health
NTP: National Toxicology Program
OSHA: Occupational Safety and Health Administration

References : Information obtained from sources including original supplier's Material Safety Data Sheet, and references including RTECS and CCOHS Cheminfo.

SECTION 1 - PRODUCT AND COMPANY INFORMATION

PPG Industries, Inc.
One PPG Place
Pittsburgh, PA 15272

EMERGENCY PHONE NUMBERS (24 hours/day): **(412) 434-4515 (U.S.)**
(514) 645-1320 (Canada)
01-800-00-21-400 (Mexico)
0532-83889090 (China)

TECHNICAL INFORMATION: 1-800-441-9695 (8:00 am to 5:00 pm EST)

PRODUCT SAFETY/MSDS INFORMATION: (412) 492-5555 7:00 a.m. - 4:30 p.m. EST

Product ID: 72015 (0822)
PRODUCT NAME: PREMIUM INTERIOR LATEX FL
SYNONYMS: None
ISSUE DATE: 11/09/2006
EDITION NO.: 8
CHEMICAL FAMILY: Polyvinyl Acetate

EMERGENCY OVERVIEW:

CAUSES EYE IRRITATION. MAY CAUSE SLIGHT SKIN IRRITATION. VAPOR AND/OR SPRAY MIST MAY BE HARMFUL IF INHALED.MAY BE HARMFUL IF SWALLOWED. This product is not expected to present any unusual hazards under fire or spill conditions. Read entire MSDS before use.

SECTION 2 - COMPOSITION INFORMATION

The following ingredient(s) marked with an "x" are considered hazardous under applicable U.S. OSHA and/or Canadian WHMIS regulations. If no ingredients are listed, then there are no U.S. OSHA and/or Canadian WHMIS hazardous ingredients in this product.

Material/ CAS Number	Percent	Hazardous	
CALCIUM CARBONATE 1317-65-3	10 - 30	X	
CARBON BLACK 1333-86-4	1 - 5	X	
SILICA CRISTOBALLITE 14464-46-1	0.1-1.0	X	
(As Silica, crystalline and Quartz) 14464-46-1	*	X	See Sections 8 and 15 for information.

SECTION 3 - HAZARDS IDENTIFICATION

ACUTE OVEREXPOSURE EFFECTS

EYE CONTACT:
Causes eye irritation. Redness, itching, burning sensation and visual disturbances may indicate excessive eye contact.
SKIN CONTACT:
May cause slight skin irritation. Dryness, itching, cracking, burning, redness, and swelling are conditions associated with excessive skin contact.
SKIN ABSORPTION:
Skin absorption not expected to occur.
INHALATION:
Vapor and/or spray mist may be harmful if inhaled.
INGESTION:
May be harmful if swallowed.
SIGNS & SYMPTOMS OF OVEREXPOSURE:
Dryness, itching, cracking, burning, redness, and swelling are conditions associated with excessive skin contact.
MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: Not applicable.
CHRONIC OVEREXPOSURE EFFECTS
Avoid long-term and repeated contact.
This product contains crystalline silica which has been classified as a human carcinogen by IARC. Long-term exposures may also lead to a disabling lung condition known as silicosis. The risk depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. Use of appropriate personal protective equipment and/or engineering controls should be employed whenever these types of operations are being performed.
The effects of long-term, low level exposures to this product have not been determined. Safe handling of this material on a long-term basis should emphasize the prevention of all contact with this material to avoid any effects from repetitive acute exposures. See Section 11, of this MSDS for a detailed list of chronic health effects information available on individual ingredients in this product.

SECTION 4 - FIRST AID MEASURES

If ingestion, irritation, any type of overexposure or symptoms of overexposure occur during or persists after use of this product, contact a POISON CONTROL CENTER, EMERGENCY ROOM OR PHYSICIAN immediately; have Material Safety Data Sheet information available.
EYE CONTACT:
Remove contact lens and pour a gentle stream of warm water through the affected eye for at least 15 minutes. If irritation persists, contact a poison control center, emergency room, or physician as further treatment may be necessary.
SKIN CONTACT:
Run a gentle stream of water over the affected area for 15 minutes. A mild soap may be used if available. If any symptoms persist, contact a poison control center, emergency room, or physician as further treatment may be necessary.
INHALATION:
Remove from area to fresh air. If symptomatic, contact a poison control center, emergency room or physician for treatment information.
INGESTION:
Gently wipe or rinse the inside of the mouth with water. Sips of water may be given. Never give anything by mouth to an unconscious person. Contact a poison control center, emergency room or physician right away as further treatment may be necessary.

SECTION 5 - FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES
FLASHPOINT: >200 Degrees F (> 93 Degrees C)
FLASHPOINT TEST METHOD:
Pensky-Martens Closed Cup
UEL: Not Available.
LEL: Not Available.
AUTOIGNITION TEMPERATURE:
Not Available.
EXTINGUISHING MEDIA:
Use National Fire Protection Association (NFPA) Class B extinguishers (carbon dioxide, dry chemical or universal aqueous film forming foam) designed to extinguish NFPA Class IIIB combustible liquid fires.
PROTECTION OF FIREFIGHTERS:
Water spray may be ineffective. Water spray may be used to cool closed containers that are exposed to extreme heat. If water is used, fog nozzles are preferable. Firefighters should wear self-contained breathing apparatus and full protective clothing.
UNUSUAL FIRE AND EXPLOSION HAZARDS:
Closed containers may explode or burst (due to the build-up of steam pressure) when exposed to extreme heat. May produce hazardous decomposition products when exposed to extreme heat. Extreme heat includes, but is not limited to, flame cutting, brazing, and welding.

SECTION 6 - ACCIDENTAL RELEASE MEASURE

STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED:
Provide maximum ventilation. Only personnel equipped with proper respiratory, skin, and eye protection should be permitted in the area. Remove all sources of ignition. Take up spilled material with sand, vermiculite, or other noncombustible absorbent material and place in clean, empty containers for disposal. Only the spilled material and the absorbant should be placed in this container.

SECTION 7 - HANDLING AND STORAGE

PRECAUTIONS TO BE TAKEN DURING HANDLING AND STORAGE:
If this material is part of a multiple component system, read the Material Safety Data Sheet(s) for the other component or components before blending as the resulting mixture may have the hazards of all of its parts.
STORAGE:
Protect from freezing.

SECTION 8 - EXPOSURE CONTROLS & PERSONAL PROTECTION

ENGINEERING CONTROLS:
Provide general dilution or local exhaust ventilation in volume and pattern to keep the concentration of ingredients listed in Section 8 below the lowest suggested exposure limits, the LEL below the stated limit, and to remove decomposition products during welding or flame cutting.

PERSONAL PROTECTIVE EQUIPMENT
EYES:
Wear safety glasses with side shields.
SKIN/GLOVES:
Wear protective clothing. Gloves should be constructed of: neoprene rubber or nitrile rubber. No specific permeation/degradation testing have been done on protective clothing for this product. Recommendations for skin protection are based on infrequent contact with this product. For frequent contact or total immersion, contact a manufacturer of protective clothing for appropriate chemical impervious equipment. Clean contaminated clothing and shoes.
RESPIRATOR:
Where ventilation is inadequate, use a NIOSH- approved air purifying respirator with the appropriate chemical cartridges or positive- pressure, air-supplied respirator. Read the respirator manufacturer's instructions and literature carefully to determine the type of airborne contaminants against which the respirator is effective, its limitations, and how it is to be properly fitted and used. Provide general dilution or local exhaust ventilation in volume and pattern to keep the concentration of ingredients listed in Section 2 below the lowest suggested exposure limits, the LEL below the stated limit, and to remove decomposition products during welding or flame cutting.
GENERAL HYGIENE - ESTABLISHED EXPOSURE LIMITS
If Threshold Limit Values (TLVs) have been established by ACGIH, OSHA, Ontario or PPG, they will be listed below. These limits are intended for use in the practice of industrial hygiene as guidelines or recommendations in the control of potential workplace health hazards. These limits are not a relative index of toxicity and should not be used by anyone without industrial hygiene training.

Material/ CAS Number	Percent	ACGIH TLV	ACGIH STEL	OSHA PEL	OSHA STEL

SECTION 9 - PHYSICAL & CHEMICAL PROPERTIES

(FORMULA VALUES, NOT SALES SPECIFICATIONS)

SPECIFIC GRAVITY:	1.232
PHYSICAL STATE:	Liquid
Percent Solids:	47.17
Percent Volatile by Volume:	65.160
pH:	Not available.
ODOR THRESHOLD:	Not available.
Vapour Pressure:	17.5 mmHg
ODOR/APPEARANCE:	Viscous liquid with an odor characteristic of the chemical family and any solvents listed in Section 2.
VAPOR DENSITY:	HEAVIER THAN AIR
Evaporation Rate:	36
BOILING POINT OR RANGE:	212 - 387Degrees F
Freezing Point or Range:	Not Applicable.
Melting Point or Range(°C):	Not Applicable.
Partition coefficient (n-octanol/water):	Not Applicable.
WEIGHT PER GALLON:	10.27 (U.S.) / 12.3 (IMPERIAL)

SECTION 10 - STABILITY AND REACTIVITY

STABILITY:
This product is normally stable and will not undergo hazardous reactions.
CONDITIONS TO AVOID:
None Known.
INCOMPATIBLE MATERIALS:
Avoid contact with strong alkalies, strong mineral acids, or strong oxidizing agents.
HAZARDOUS POLYMERIZATION:
None Known.
HAZARDOUS DECOMPOSITION PRODUCTS:
- Carbon monoxide - Carbon dioxide - Acetic acid - Lower molecular weight polymer fractions

SECTION 11 - TOXICOLOGICAL INFORMATION

ACUTE TOXICITY

Material/ CAS Number	Percent	ORAL LD50 (g/kg)	DERMAL LD50 (g/kg)	INHALATION LC50 (mg/l)
CARBON BLACK 1333-86-4	1 - 5	15.40 g/kg	3.00 g/kg	Not Available

CHRONIC TOXICITY

Ingredient Target Organ/Chronic Effects:
- Lung - Carcinogen

Mutagenicity Toxicity:
This has not been tested for this product.
Reproductive Toxicity:
This has not been tested for this product.

SUPPLEMENTAL HEALTH INFORMATION:

Material/ CAS Number	Percent	Ingredient Specific Animal Data:
CARBON BLACK 1333-86-4	1 - 5	This product contains carbon black which has been rated an IARC 2B carcinogen due to animal data.

SECTION 12 - ECOLOGICAL INFORMATION

POTENTIAL ENVIRONMENTAL EFFECTS
Ecotoxicity: No Information Available.

ENVIRONMENTAL FATE
Mobility: No Information available.
Biodegradation: No information available.
Bioaccumulation: No Information Available.

PHYSICAL/CHEMICAL

Hydrolysis: No information available.
Photolysis: No information available.

SECTION 13 - DISPOSAL CONSIDERATIONS

Provide maximum ventilation, only personnel equipped with proper respiratory and skin and eye protection should be permitted in the area. Take up spilled material with sawdust, vermiculite, or other absorbent material and place in containers for disposal.
Waste material must be disposed of in accordance with federal, state, provincial and local environmental control regulations. Empty containers should be recycled by an appropriately licensed reconditioner/salvager or disposed of through a permitted waste management facility. Additional disposal information is contained on the Environmental Data Sheet for this product, which can be obtained from your PPG representative.

SECTION 14 - TRANSPORTATION INFORMATION

Proper Shipping Name: Paint- Non-Regulated Goods

PRODUCT STATUS RELATIVE TO THE U.S. EPA TOXIC SUBSTANCES CONTROL ACT

All chemical substances in this product are listed on the U.S. TSCA Inventory or are otherwise exempt from TSCA Inventory reporting requirements.

SECTION 3 - HAZARDS IDENTIFICATION

EFFECTS OF OVEREXPOSURE FROM:

INGESTION: May be harmful if swallowed.

EYE CONTACT: Causes eye irritation.

SKIN CONTACT: May cause slight skin irritation.

INHALATION: Vapor and/or spray mist may be harmful if inhaled.

CHRONIC OVEREXPOSURE: Avoid long-term and repeated contact. This product contains crystalline silica which has been classified as a human carcinogen by IARC. Long-term exposures may also lead to a disabling lung condition known as silicosis. The risk depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. Use of appropriate personal protective equipment and/or engineering controls should be employed whenever these types of operations are being performed. This product contains titanium dioxide. Animals inhaling massive quantities of titanium dioxide dust in a long-term study developed lung tumors. Studies with humans involved in manufacture of this pigment indicate no increased risk of cancer from exposure. Potential for inhalation of titanium dioxide dusts from coatings is very limited. Since overexposures are not expected, there is no significant hazard for man.

SIGNS AND SYMPTOMS OF OVEREXPOSURE: Redness, itching, burning sensation and visual disturbances may indicate excessive eye contact. Dryness, itching, cracking, burning, redness, and swelling are conditions associated with excessive skin contact.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: Not applicable.

WARNING: This product contains a chemical known to the State of California to cause cancer.

SECTION 4 - FIRST AID MEASURES

INGESTION: If swallowed, do not induce vomiting. Gently wipe out inside mouth to remove any residual material.

EYE CONTACT: In case of eye contact, remove contact lenses and flush eyes immediately with a gentle stream of luke warm water for at least 15 minutes.

SKIN CONTACT: In case of skin contact, flush immediately with plenty of water for at least 15 minutes followed by washing with soap and water.

INHALATION: If affected by inhalation of vapor or spray mist, remove to fresh air. Apply artificial respiration and other support measures as required.

OTHER: If ingestion, any type of overexposure or symptoms of overexposure occur during or following the use of this product, contact a poison control center, emergency room or physician immediately; have Material Safety Data Sheet information available.

SECTION 5 - FIRE FIGHTING MEASURES

FLASHPOINT: Not applicable

Not applicable N (PENSKY-MARTENS CLOSED CUP) FLAMMABLE LIMITS: Lower explosion limit (LEL):

Not available Upper explosion limit (UEL): Not available

EXTINGUISHING MEDIA: Use extinguishers appropriate for surrounding fire.

UNUSUAL FIRE AND EXPLOSION HAZARDS: Keep this product away from heat, sparks, flame, and other sources of ignition (i.e., pilot lights, electric motors, static electricity). Invisible vapors can travel to a source of ignition and flash back. Do not smoke while using this product. Keep containers tightly closed when not in use. Closed containers may explode when overheated. Do not apply to hot surfaces. Toxic gases may form when this product comes in contact with extreme heat.

SPECIAL FIRE FIGHTING PROCEDURES: Water spray may be ineffective. Water spray may be used to cool closed containers to prevent pressure build-up and possible autoignition or explosion when exposed to extreme heat. If water is used, fog nozzles are preferable. Fire-fighters should wear self-contained breathing apparatus and full protective clothing.

SECTION 6 - ACCIDENTAL RELEASE MEASURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED: Provide maximum ventilation. Only personnel equipped with proper respiratory, skin, and eye protection should be permitted in the area. Remove all sources of ignition. Take up spilled material with sand, vermiculite, or other noncombustible absorbent material and place in clean, empty containers for disposal. Only the spilled material and the absorbant should be placed in this container.

WASTE DISPOSAL METHOD: Waste material must be disposed of in accordance with federal, state, provincial, and local environmental control regulations. Empty containers should be recycled or disposed of through an approved waste management facility.

SECTION 7 - HANDLING AND STORAGE

HANDLING AND STORAGE PRECAUTIONS: Do not store above 120 degrees F. (48 degrees C.).

OTHER PRECAUTIONS: Vapors may collect in low areas. If this material is part of a multiple component system, read the Material Safety Data Sheet(s) for the other component or components before blending as the resulting mixture may have the hazards of all of its parts. Containers should be grounded when pouring. Avoid free fall of liquids in excess of a few inches.

SECTION 8 - EXPOSURE CONTROLS AND PERSONAL PROTECTION

PERSONAL PROTECTIVE EQUIPMENT FOR:

EYE PROTECTION: Wear safety glasses.

SKIN PROTECTION: Wear protective clothing. Gloves should be constructed of: impermeable material. No specific permeation/degradation testing have been done on protective clothing for this product. Recommendations for skin protection are based on infrequent contact with this product. For frequent contact or total immersion, contact a manufacturer of protective clothing for appropriate chemical impervious equipment.

RESPIRATORY PROTECTION: Where ventilation is inadequate, use a NIOSH- approved air purifying respirator with the appropriate chemical cartridges or positive-pressure, air-supplied respirator. Read the respirator manufacturer's instructions and literature carefully to determine the type of airborne contaminants against which the respirator is effective, its limitations, and how it is to be properly fitted and used.

OTHER EQUIPMENT: Clean contaminated clothing and shoes.

VENTILATION REQUIREMENTS: Provide general dilution or local exhaust ventilation in volume and pattern to keep the concentration of ingredients listed in Section 2 below the lowest suggested exposure limits, the LEL below the stated limit, and to remove decomposition products during welding or flame cutting.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

[FORMULA VALUES, NOT SALES SPECIFICATIONS]

BOILING RANGE: 212- 471Degrees F

SOLUBILITY IN WATER: 57.9 %

VAPOR PRESSURE: 17.5 mmHg

WEIGHT/GALLON (LBS): 11.52 (U.S.)

VAPOR DENSITY: Heavier than air

pH: Not determined

% VOLATILE/VOLUME: 72.100

% SOLIDS BY WEIGHT: 46.93

SPECIFIC GRAVITY: 1.382

EVAPORATION RATE(BuOAc=100): 36

ODOR/APPEARANCE: Viscous liquid with an odor characteristic of the solvents listed in Section 2.

SECTION 10 - STABILITY AND REACTIVITY

This product is normally stable and will not undergo hazardous reactions.

INCOMPATIBILITY (MATERIALS AND CONDITIONS TO AVOID): Avoid contact with strong alkalies, strong mineral acids, or strong oxidizing agents.

HAZARDOUS DECOMPOSITION PRODUCTS: May produce the following hazardous decomposition products when exposed to extreme heat: oxides of aluminum ; carbon

monoxide ; carbon dioxide ; Extreme heat includes, but is not limited to, flame cutting, brazing, and welding.

Hazardous Materials Identification System (HMIS) and National Fire Protection Association (NFPA) Ratings:

HMIS Rating		NFPA Rating	
HEALTH	1*	HEALTH	1
FLAMMABILITY	1	FLAMMABILITY	1
REACTIVITY	0	INSTABILITY	0

Rating System:0=Minimal, 1=Slight, 2=Moderate, 3=Serious, 4=Severe, *=Chronic Effects.

Safe handling of this product requires that all of the information on the MSDS be evaluated for specific work environments and conditions of use.

THIS IS THE END OF THE MSDS FOR: 78010 (00181950.00114-110)

FIRE AND EXPLOSION HAZARD DATA

FLAMMABILITY CLASSIFICATION : OSHA Not combastible
FLASH POINT: NA
U.S.DOT Hazard Class: Not Regulated
EXTINGUISHING MEDIA : Not Applicable

HEALTH EFFECTS OF OVER EXPOSURE AND FIRST AID

Primary Routes	Symptoms	First Aid
Eye	May cause burning and irritation upon direct contact.	Flush with water. Seek medical attention
Skin	Direct skin contact may cause skin irritation and dermatitis.	Wash with soap and water.
Ingestion	Severe oral intoxication will lead to intense burning of the throat and may result in drowsiness, numbness and headache followed by weakness & nausea.	Do not induce vomiting. Seek medical attention.
Inhalation	Acute overexposure in mist form may result in irritation of throat & lungs.	Remove person to fresh air. Apply artificial respiration.

Health Effects:- Sub chronic (target organ effects.) None known . Chronic target effects, none known.
Note: This product contains no reported or suspected carcinogens
REACTIVITY INFORMATION
STABILITY: STABLE Hazardous polymerization will not occur
Conditions to avoid: Avoid open flames. Strong oxidizing agents. Elevated temperatures
Burning may produce Carbon dioxide. Carbon monoxide. Soot smoke/vinyl/acrylic monomers.

Spill & leak Procedure: Collect large spills with shovel or pump and move to other leakproof containers. Spread sand over spill areas. Clean with detergent solution. In case of spills or leak, remove all ignition sources, absorb with absorbent. Sweep or scoop up. Ventilate.
Personal Protection and Exposure Control
Eye: Wear goggles to avoid splash. Skin: Use protective gloves. Inhalation: Use mask while spraying. Avoid inhalation.
Engineering Controls: Sufficient ventilation to keep within OSHA PEL/ TLV limit.
The dried film of the product may contain all or some of the following OSHA chemicals and may become a dust nuisance when removed by.
Sanding or grinding OSHA recommends a PEL/TWA of 15 mg/m3 for the respirable fraction. ACGIH recommends TLV/TWA of 10 mg/m3 for total dust
Use approved mask, eye goggles and gloves while sanding, or grinding. Skin absorption may contribute to the overall exposure of the material.
OCCUPATIONAL EXPOSURE LIMITS.

Chemical Name	(OSHA)			
	PEL/TWA	PEL/Ceiling	PEL/Stel	Skin
Titanium Dioxide	15 mg/m3	N/E	N/E	N/E
Calcium Carbonate	15 mg/m3	N/E	N/E	N/E
Quartz(Dust)	1 mg/m3	N/E	N/E	N/E
Silicate	15 mg/m3	N/E	N/E	N/E
Inert nuisance Dust	5 mg/m3	N/E	N/E	N/E
Total Dust	15 mg/m3	N/E	N/E	N/E
Carbon Black	3.5 mg/m3	N/E	N/E	N/E

STORAGE AND DISPOSAL
Precautions Keep away from heat and open flames. Keep from freezing. Use with adequate ventilation. Dispose waste by sanitary landfill or incineration In accordance with appropriate regulations.
Regulatory Information This product is not a Hazardous chemical under 29 CFR 1910-1200 and therefore not covered.
Emergency Planning & community RTK (SARA 313) Sect 313 Info ;(40 CFR 372) Chemicals listed in section 313 with concentration over de minims Levels when present are shown on page 1 of this MSDS.
Clean water act: This product may be regulated as oil under section 311.Discharges to navigable water-ways resulting in a visible surface sheen is Prohibited and must be reported.
EPA RCRA (40 CFR 110) Information: This product is not included in the list of hazardous substances nor does it exhibit the characteristics of Haz .waste. When a decision is made to discard this material as supplied, it does not meet RCRA characteristics definition of ignitability, corrosivity or reactivity and it Is not listed in 40 CFR 261.33. The toxicity (TC) however, has not been evaluated by Toxicity Characteristic Leaching Procedure. (TCLP).
State Right to Know: COMPONENT INFORMATION SECTION of this MSDS provides necessary data as required under the provisions of State Right to Know Act.
EPA TSCA All components of this product are listed ar are exempt from this listing on the TSCA chemical substances.
EPA-SARA This product contains no toxic chemical at a level, which is reportable under Sec 313 Title III (40 CFR 37) under SARA Toxic Chemical Release Reporting Regulations).

DISCLAIMER

The information contained herein is presented in good faith. This information is furnished without warranty of any kind. Employers should use this information only as a supplement to other information gathered by them and must make independent determination of suitability and completeness of information from all sources to assure proper use of these Materials and the safety and health of employees. Any use of this data and information must be determined by the user to be in accordance with applicable federal, state and local laws and regulations.

NOTICE: Removal of old paint by sanding, scraping or other means may generate dust or fumes which contain lead. Exposure to lead dust or fumes may cause adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For additional information, contact the USEPA/Lead information Hotline at 1-800-LEAD-FYI:

Section 3 – Hazards Identification

ROUTES OF EXPOSURE

Exposure may be by INHALATION and/or SKIN or EYE contact, depending on conditions of use. To minimize exposure, follow recommendations for proper use, ventilation, and personal protective equipment.

EFFECTS OF OVEREXPOSURE

Irritation of eyes, skin and upper respiratory system. In a confined area vapors in high concentration may cause headache, nausea or dizziness.

SIGNS AND SYMPTOMS OF OVEREXPOSURE

Redness and itching or burning sensation may indicate eye or excessive skin exposure.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE - None generally recognized.

CANCER INFORMATION

For Complete Discussion of Toxicology Data Refer to Section 11.

- Continued -

Section 4 – First Aid Measures

If INHALED: If affected, remove from exposure. Restore breathing. Keep warm and quiet.
If on SKIN: Wash affected area thoroughly with soap and water. Remove contaminated clothing and launder before re-use.
If in EYES: Flush eyes with large amounts of water for 15 minutes. Get medical attention.
If SWALLOWED: Do not induce vomiting. Get medical attention immediately.

Section 5 – Fire Fighting Measures

FLASH POINT	LEL	UEL
>200 °F PMCC	N.A.	N.A.

FLAMMABILITY CLASSIFICATION - Not Applicable
EXTINGUISHING MEDIA - Carbon Dioxide, Dry Chemical, Alcohol Foam
UNUSUAL FIRE AND EXPLOSION HAZARDS

Closed containers may explode (due to the build-up of pressure) when exposed to extreme heat. During emergency conditions overexposure to decomposition products may cause a health hazard. Symptoms may not be immediately apparent. Obtain medical attention.

SPECIAL FIRE FIGHTING PROCEDURES

Full protective equipment including self-contained breathing apparatus should be used. Water spray may be ineffective. If water is used, fog nozzles are preferable. Water may be used to cool closed containers to prevent pressure build-up and possible autoignition or explosion when exposed to extreme heat.

Section 6 – Accidental Release Measures

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED

Remove all sources of ignition. Ventilate the area. Remove with inert absorbent.

Section 7 – Handling and Storage

STORAGE CATEGORY - DOL Storage Class IIIB
PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE

Keep container closed when not in use. Transfer only to approved containers with complete and appropriate labeling. Do not take internally. Keep out of the reach of children.

Section 8 – Exposure Controls/Personal Protection

PRECAUTIONS TO BE TAKEN IN USE

Use only with adequate ventilation. Avoid contact with skin and eyes. Avoid breathing vapor and spray mist. Wash hands after using.

These coatings may contain materials classified as nuisance particulates (listed "as Dust" in Section 2) which may be present at hazardous levels only during sanding or abrading of the dried film. If no specific dusts are listed in Section 2, the applicable limits for nuisance dusts are ACGIH TLV 10 mg./m3 (total dust), 3 mg./m3 (respirable fraction), OSHA PEL 15 mg./m3 (total dust), 5 mg./m3 (respirable fraction).

Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD(in US) or contact your local health authority.

- Continued -

Section 8 – Exposure Controls/Personal Protection (continued)

VENTILATION

Local exhaust preferable. General exhaust acceptable if the exposure to materials in Section 2 is maintained below applicable exposure limits. Refer to OSHA Standards 1910.94, 1910.107, 1910.108.

RESPIRATORY PROTECTION

If personal exposure cannot be controlled below applicable limits by ventilation, wear a properly fitted organic vapor/particulate respirator approved by NIOSH/MSHA for protection against materials in Section 2.

When sanding or abrading the dried film, wear a dust/mist respirator approved by NIOSH/MSHA for dust which may be generated from this product, underlying paint, or the abrasive.

PROTECTIVE GLOVES

Wear gloves which are recommended by glove supplier for protection against materials in Section 2.

EYE PROTECTION

Wear safety spectacles with unperforated sideshields.

Section 9 – Physical and Chemical Properties

PRODUCT WEIGHT	8.51-8.55 lb/gal	EVAPORATION RATE	Slower than Ether
SPECIFIC GRAVITY	1.02-1.03	VAPOR DENSITY	Heavier than Air
BOILING POINT	212-449 °F	MELTING POINT	Not Available
VOLATILE VOLUME	71 %	SOLUBILITY IN WATER	Not Available

VOLATILE ORGANIC COMPOUNDS (VOC Theoretical)

2.5 lb/gal	Less Federally Exempt Solvents
1.0-1.1 lb/gal	Emitted VOC

Section 10 – Stability and Reactivity

STABILITY - Stable

CONDITIONS TO AVOID - None known.

INCOMPATIBILITY - None known.

HAZARDOUS DECOMPOSITION PRODUCTS - By fire: Carbon Dioxide, Carbon Monoxide

HAZARDOUS POLYMERIZATION - Will not occur

Section 11 – Toxicological Information

CHRONIC HEALTH HAZARDS

No ingredient in these products is an IARC, NTP or OSHA listed carcinogen.

Ethylene Glycol is considered an animal teratogen. It has been shown to cause birth defects in rats and mice at high doses when given in drinking water or by gavage. There is no evidence to indicate it causes birth defects in humans.

Prolonged overexposure to solvent ingredients in Section 2 may cause adverse effects to the liver and urinary systems.

All chemicals in these products are listed, or are exempt from listing, on the TSCA Inventory.

Section 16 – Other Information

CANADIAN DISTRIBUTOR: *Consumer Brands Canada Inc.*
200 Confederation Parkway
Vaughn, ON L4K 4T8

NOTE: These products have been classified in accordance with the hazard criteria of the CPR and the MSDS contains all of the information required by the CPR.

The above information pertains to these products as currently formulated, and is based on the information available at this time. Addition of reducers or other additives to these products may substantially alter the composition and hazards of the product. Since conditions of use are outside our control, we make no warranties, express or implied, and assume no liability in connection with any use of this information.

Section 1 **Chemical Product and Company Identification**

Product Name: Nova Color Artists' Mediums (See list Section 16)
Product Code: Not applicable Chemical Family: Not applicable
Chemical Name: Not applicable Formula: Not applicable
Manufacturer:

Artex Mfg Co. dba Nova Color Artists' Acrylic Paint
5894 Blackwelder Street, Culver City, CA 90232 Telephone 310 204-6900 Fax 310 838-2094

Section 2 **Composition, Information on Ingredients**

Ingredient Listing:	CAS No.:	OSHA PEL:	ACGIH TLV:	STEL:	% COMP:
Proprietary	N/L	N/L	N/L	N/L	100

The ingredients in this product are judged to be non-hazardous and are regarded as trade secrets.

Section 3 **Hazards Identification**

Emergency Overview: Non-hazardous material.
Physical Description: Water-based acrylic paints.
Major Health Hazards: None known for usual and ordinary uses.
Physical Hazards: None known for usual and ordinary uses.
Routes of Entry: Inhalation: No Skin: No Eye: No Ingestion: No
Potential Health Effects: None known for usual and ordinary uses.
Inhalation: Short Term Exposure: Not applicable
Long Term Exposure: Not applicable
Skin Contact: Short Term Exposure: Not applicable
Long Term Exposure: Not applicable
Eye Contact: Short Term Exposure: Not applicable
Long Term Exposure: Not applicable
Ingestion: Short Term Exposure: Not applicable
Long Term Exposure: Not applicable
Carcinogen Status: NTP: Not listed IARC: Not listed OSHA: Not listed
Medical Conditions Aggravated by Exposure: None known.

Section 4 **First Aid Measures**

Eyes: For eye contact, carefully flush for 15 minutes. If irritation occurs, contact a physician.
Skin: Wash with soap and water.
Inhalation: Not likely to occur; seek fresh air.
Ingestion: Drink water or milk to dilute. Do not induce vomiting.

Section 5 **Fire Fighting Measures**

Flash Point: None.
Fire and Explosion Hazards: Sealed containers may rupture; paint films may burn. This product presents no unusual hazard.
Extinguishing Media: Water, foam, carbon dioxide or dry chemicals.
Special Fire Fighting Procedures: Not required for this material.

Section 6 **Accidental Release Measures**

Spill or Leak Procedures: Contain spill. Recover as much as possible by mechanical means. Absorb remainder with an inert material. Place into closed container and store in a safe location to await disposal. Wash the spill area with soap and water.

Section 7 **Handling and Storage**

Storage Temperature: Store at 70 deg. F. (Min: 50 deg. F; Max: 100 deg. F)
Shelf Life: Not known. Special Sensitivity: None likely or known.

Handling and Storage:	Use under ventilated conditions. For personal protection, wash thoroughly after handling product. Wash hands before eating, smoking or using toilet facilities.
Precautions:	Avoid eye and skin contact. Keep container closed when not being used.

Section 8 **Exposure Controls, Personal Protection**

Exposure Limits:	None known.
Eye Protection:	Wear splash goggles where spill or splashing may occur.
Skin Protection:	Not required.
Respiratory and Ventilation:	Wear approved NIOSH respirator if exposure to mist or vapors exceeds applicable PEL/TLV limits. Use in accordance with manufacturer's use limitations and OSHA regulations.

Section 9 **Physical and Chemical Properties**

Physical Form:	Viscous liquid	Color:	Milky
Odor:	Acrylic	Boiling Point:	212 deg. F
Melting Point:	Not applicable	Freezing Point:	32 deg. F
PH:	Not applicable	Solubility in Water:	Miscible
Specific Gravity:	1.05 - 1.10	Bulk Density:	Not applicable
% Volatile by Weight:	Not applicable	Vapor Pressure:	Equivalent to water
Vapor Density:	Equivalent to water		

Section 10 **Stability and Reactivity**

Stability:	Stable.	Polymerization:	No.
Incompatibilities:	Avoid strong oxidizing agents.	Decomposition Products:	None known.
Conditions to Avoid:	Not applicable.		

Section 11 **Toxicological Information**

Health Effects:	Heated decomposition products may cause eye and respiratory irritation.
Inhalation:	Not likely.
Skin Contact:	Prolonged liquid contact with skin may cause irritation or redness.
Eye Contact:	Prolonged liquid contact with eyes may cause irritation or redness.
Ingestion:	No effects known in usual and ordinary uses of product.

Section 12 **Ecological Information**

No ecological issues likely.

Section 13 **Disposal Considerations**

Waste Disposal Method:	Dispose of all waste materials in accordance with all applicable federal, state and local regulations for the disposal of aqueous wastes. Do not flush liquid into public sewer or water systems.

Section 14 **Transportation Information**

D.O.T. Shipping Name:	Paints or stains 149980 Sub. 2		
Technical Shipping Name:	Not known		
D.O.T. Hazard Class:	Non-hazardous

MATERIAL SAFETY DATA SHEET #140

Date Issued: March, 2006 (Replaces June, 2004)
Replaces MSDS #'s 8, 16, 17, 21, 30, 31, 44, 45, 47, 75, 86, 89, 90, 101, 105, 120, and 121
DOT Classification: Non-Hazardous
HMIS Ratings: Health: 1 Fire: 0
Reactivity: 0 Personal Protection: A

Product(s) Covered by this MSDS:
DPR finishes, PMR Finishes, Weatherlastic® Finishes, Infinitex™ Finishes, Custom Brick™ Polymer Finishes, and Si modification finishes made under any of the following texture variations:
Quarzputz®, Sandblast®, Sandpebble®, Sandpebble® Fine, Freestyle®, Sandpebble® NT, Sandpebble Fine® NT, Sandblast® NTX, Sandpebble Fine® NM, Sandpebble Fine® NTX, Sandpebble Fine® SW, Quarztone® Fine, Quarzfloat, Lymestone™, Mojave™, Mojave SW™, Freestyle® Fine, Freestyle® Smooth, Sandpebble® Coarse, Adobe, ADB

(Products offered in a wide variety of colors).

Component Information and Hazards:

Ingredients	CAS#; List	OSHA-PEL	ACGIH-TLV	% by Weight
		mg/m^3	mg/m^3	
Sand (Encapsulated)	14808-60-7	15	10	6 - 67%
Water	7732-18-5	NE	NE	13 - 22%
Silicates	1332-58-7	10	10	0 - 6%
Mica	12001-26-2	3	3	0 - 4%
Calcium Carbonate	471-34-1	10	10	0 - 57%
Acrylic Latex Polymer/Binder	Not Applicable	NE	NE	8.5 - 12.0%
Titanium Dioxide (Rutile)	13463-67-7	NE	5	0 - 8%

Physical and Chemical Characteristics:
Opaque, semi-solid, wet stucco-like material. Slight ammonia odor.
Specific Gravity: 1.75 – 1.9. pH range: 8.0-9.9

Fire Hazard Data:
Flash Point: Not applicable.
Extinguishing Media: Use extinguishing material suitable for surrounding fire. Closed plastic containers may build up pressure, rupture, or melt due to extreme heat exposure.
Fire Fighters: Wear positive pressure, self-contained breathing apparatus (SCBA) in enclosed areas.

Reactivity Data:
Stability: Stable
Thermal Decomposition Products: CO, CO_2, CN, NO_X.
Hazardous Polymerization: Will not occur. Not compatible with strong oxidizing agents or strong acids.

Health Hazard Data:

Routes of Entry: No known specific skin, inhalation or ingestion hazard.

Carcinogens: Respirable crystalline silica has been listed by IARC as carcinogenic to experimental animals and has developed limited evidence for carcinogenicity to humans, however, IARC has determined that the carcinogenicity to humans is neither certain or proven. The critical regulatory particle size for respirable silica is #10 µm MMAD (as in the PM NAAQS). The following link provides more information on respirable silica:
http://cfpub.epa.gov/ncea/cfm/recordisplay.cfm?deid=12999

The crystalline silica in this product is not of dry, respirable form. Respirable silica may be created by grinding operations on the dried film.

Health Hazards: Irritating and abrasive if splashed into the eye because of sand content; may be a skin irritant to sensitive individuals. No acute or chronic hazards are known for the material as packaged at point of manufacture.

Symptoms of Overexposure: None established. Non-specific irritation is possible in sensitive individuals. No known medical conditions aggravated by exposure.

Emergency and First Aid Procedures: Treat for symptoms. If irritation of the eyes, nose, or throat occurs, move to fresh air. If material gets in eyes, wash eyes immediately with large amounts of water, lifting eye lids occasionally. Get medical attention.

Control and Protective Measures:

Protective Gloves: As needed for physical protection.

Eye Protection: Safety or splash goggles recommended.

Other Equipment: Long sleeves, apron as needed.

Respiratory Protection: Not required for wet mixture used exterior or in well-ventilated areas. Approved mechanical filter respirator should be used to remove solid airborne particles during spray, sawing, and sanding operations.

Ventilation: None required when used exterior. Provide adequate air movement and mechanical ventilation if used in an enclosed area.

Work Practices: Observe rules for good personal hygiene and work practices. Wash hands before smoking, eating, or using toilet facilities.

Precautions for Safe Handling & Use/Leak Procedures:

Spills: Shovel and recover; then dispose of as common waste. Do not flush to sewer or streams: material can clog drains and make streams turbid.

Waste Disposal: Non-regulated material.

Storage: Keep from freezing.

EPA Supplier Notification/Environmental:

- These trade name products contain no chemicals subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Re-authorization Act of 1986 (SARA) and 40 CFR Part 372.
- These products contain no ingredients on the list of Extremely Hazardous Substances for SARA Emergency Planning.
- Tier I / Tier II Hazard Category (40 CFR 370): Immediate Health Hazard.

This Material Safety Data Sheet (MSDS) has been developed for current compliance with OSHA's Hazard Communication Standard, 29 CFR 1910.1200.

The information contained herein is based upon data considered accurate. Dryvit Systems, Inc. assumes no responsibility for personal injury or property damage to vendees, users or third parties caused by the material. Such vendees and users assume all risks associated with the use of these materials.

Material Safety Data Sheet

24 Hour Emergency Phone Numbers:
Medical: 1-800-327-3874
1-513-559-5111
Transportation:
1-800-535-5053
1-352-323-3500

*NOTE: National Response Center emergency numbers to be used only in the event of chemical emergencies involving a spill, leak, fire, exposure or accident involving chemicals.

IMPORTANT: Provide this information to employees, customers, and users of this product. Read this MSDS before handling or disposing of this product. This product is covered by the OSHA Hazard Communication Standard and this document has been prepared in accordance with requirements of this standard. All abbreviated terms used in this MSDS are further described in Section 16.

Section 1 - Chemical Product / Company Information

This Material Safety Data Sheet is available in: Canadian French and Hispanic American Spanish upon request
Esta hoja de datos de la seguridad de los materiales está disponible en francés canadiense y en español a su solicitud
Los Datos de Serguridad del Producto pueden obtenerse en Espanol si lo riquiere

Product Name: Premium Lightweight Joint Compound with DryDar Dry Indicator
Product UPC Number: Contact DAP at 1-888-327-8477
Product Use/Class: RTU Spackle/Wallboard Repair
Manufacturer: DAP Inc.
2400 Boston Street Suite 200
Baltimore, MD 21224-4723
888-327-8477 (non-emergency matters)

Revision Date: 08/16/2005
Supercedes: 08/16/2005
MSDS Number: 00079967001

Section 2 - Composition / Information On Ingredients

Chemical Name	CASRN	WT%	ACGIH TWA	ACGIH STEL	ACGIH CEIL	OSHA TWA	OSHA STEL	OSHA CEIL	Skin
Calcium carbonate	1317-65-3	30-60	10 MGM3	N.E.	N.E.	5 MGM3	N.E.	N.E.	No
Perlite	93763-70-3	1-5	10 MGM3	N.E.	N.E.	N.E.	N.E.	N.E.	No
Palygorskite (attapulgite)	12174-11-7	1-5	N.E.	N.E.	N.E.	N.E.	N.E.	N.E.	No
Silica, crystalline	14808-60-7	0.1-1.0	0.05 MGM3	N.E.	N.E.	(10 ÷ % SiO2) / 2 MGM3	N.E.	N.E.	No

Exposure Notes:

14808-60-7 The 2002 ACGIH Threshold Limit Values for Chemical Substances and Physical Agents lists the median Respirable Particulate Mass (RPM) point for crystalline silica at 4.0 microns in terms of the particle's aerodynamic diameter.

The TLVs for crystalline silica represent the respirable fraction.

OSHA PEL TWA for Quartz is calculated using the following formula: 10 mg/m3/(% SiO2 + 2). Both concentration and percent quartz for the application of this limit are to be determined from the fraction

passing a size selector with the following characteristics

Aerodynamic diameter (unit density sphere)	Percent passing selector
2	90
2.5	75
3.5	50
5.0	25
10	0

Important: Listed Permissible Exposure Levels (PEL) are from the U.S. Dept. of Labor OSHA Final Rule Limits (CFR 29 1910.1000); these limits may vary between states.

Note: An employee's skin exposure to substances having a "YES" in the "SKIN" column in the table above shall be prevented or reduced to the extent necessary under the circumstances through the use of gloves, coveralls, goggles or other appropriate personal protective equipment, engineering controls or work practices

Section 3 - Hazards Identification

Emergency Overview: A pink paste with a very slight ammonia odor. CAUTION!

Refer to other MSDS sections for other detailed information.

Effects Of Overexposure - Eye Contact: Direct eye contact may cause irritation.

Effects Of Overexposure - Skin Contact: May cause skin irritation. May cause dry skin.

Effects Of Overexposure - Inhalation: Inhalation may cause irritation to the respiratory tract (nose, mouth, mucous membranes). Inhalation of dust may cause lung damage or other adverse pulmonary and respiratory effects.

Effects Of Overexposure - Ingestion: Ingestion may cause gastrointestinal irritation, nausea, vomiting and diarrhea.

Effects Of Overexposure - Chronic Hazards: The International Agency for Research on Cancer (IARC) has determined that crystalline silica in the form of quartz or cristobalite that is inhaled from occupational sources is carcinogenic to humans (Group 1- carcinogenic to humans). Refer to IARC Monograph 68, Silica, Some Silicates and Organic Fibres (published in June 1997) in conjunction with the use of these materials. The National Toxicology Program (NTP) classifies respirable crystalline silica as "known to be a human carcinogen". Refer to the 9th Report on Carcinogens (2000). The American Conference of Governmental Industrial Hygienists (ACGIH) classifies crystalline silica, quartz, as a suspected human carcinogen (Group A2).
Breathing dust containing respirable crystalline silica may not cause noticeable injury or illness even though permanent lung damage may be occurring. Inhalation of dust may have the following serious chronic health effects: Excessive inhalation of respirable dust can cause pneumoconiosis, a respiratory disease, which can result in delayed, progressive, disabling and sometimes fatal lung injury. Symptoms include cough, shortness of breath, wheezing, non-specific chest illness and reduced pulmonary function. Smoking exacerbates this disease. Individuals with pneumoconiosis are predisposed to develop tuberculosis. There is some evidence that breathing respirable crystalline silica or the disease silicosis is associated with an increased incidence of significant disease endpoints such as scleroderma (an immune system disorder manifested by fibrosis of the lungs, skin and other internal organs) and kidney disease.

Primary Route(s) Of Entry: Skin Contact, Skin Absorption, Inhalation

Medical Conditions which May be Aggravated by Exposure: If dry sanded, asthma and asthma-like conditions

may worsen from prolonged or repeated exposure to dust.

Section 4 - First Aid Measures

First Aid - Eye Contact: In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention immediately.

First Aid - Skin Contact: Wash off immediately with soap and plenty of water.

First Aid - Inhalation: If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

First Aid - Ingestion: Call a physician or Poison Control Center immediately. Do not induce vomiting.

Note to Physician: None.

COMMENTS: Call Medical Emergency at 1-800-327-3874 if any irritation or complication arises from any of the above routes of entry.

Section 5 - Fire Fighting Measures

Flash Point, F: Greater than 200
Method: (Seta Closed Cup)

Lower Explosive Limit, %: Not Established
Upper Explosive Limit, %: Not Established

Extinguishing Media: Carbon Dioxide, Dry Chemical, Foam, Water Fog

Unusual Fire And Explosion Hazards: None known.

Special Firefighting Procedures: Cool fire-exposed containers using water spray.

Section 6 - Accidental Release Measures

Steps To Be Taken If Material Is Released Or Spilled: Wear proper protective equipment as specified in Section 8. Scrape up dried material and place into containers.

Section 7 - Handling And Storage

Handling: KEEP OUT OF REACH OF CHILDREN! Avoid contact with skin and eyes. Wash thoroughly after handling. While dry sanding, use of a NIOSH-approved dust mask is recommended. Avoid excessive heat and handling. Do not breathe dust. Removal of this product after use will result in the generation of Dust. If dry-sanded, exposure to dust may result in the build-up of material in eyes, ears, nose, and mouth which may cause irritation.

Storage: Store away from caustics and oxidizers. Avoid excessive heat and freezing. Do not store at temperatures above 120 degrees F. Keep tightly closed.

Section 8 - Exposure Controls / Personal Protection

Precautionary Measures: Please refer to other sections and subsections of this MSDS.

Engineering Controls: Local ventilation of emission sources may be necessary to maintain ambient

concentrations below recommended exposure limits. Prevent build-up of dust and vapors by opening windows and doors or use other means to ensure fresh air entry during application, drying and sanding. Wet sanding is recommended to avoid generation of dust.

Respiratory Protection: A respiratory protection program that meets the OSHA 1910.134 and ANSI Z88.2 requirements must be followed whenever workplace conditions warrant a respirator's use. Use an approved NIOSH/OSHA respirator if dry sanded. If concentrations exceed the exposure limits specified, use of a NIOSH-approved supplied air respirator is recommended. Where the protection factor is exceeded, use of a Self Contained Breathing Apparatus (SCBA) may be necessary.
National Institute for Occupational Safety and Health (NIOSH) has recommended that the permissible exposure limit be changed to 50 micrograms respirable free silica per cubic meter of air (0.05 mg/m3) as determined by a full shift sample up to 10-hour work shift.

Skin Protection: Wear gloves with repeated or prolonged use.

Eye Protection: Safety glasses with side-shields.

Other protective equipment: Not required under normal use.

Hygienic Practices: Remove and wash contaminated clothing before re-use.

Section 9 - Physical And Chemical Properties

Boiling Range:	Not Established	**Vapor Density:**	Not Established
Odor:	Very Slight Ammonia	**Odor Threshold:**	Not Established
Appearance:	Pink	**Evaporation Rate:**	Not Established
Solubility in H2O:	Not Established	**Specific Gravity:**	1.205
Freeze Point:	Not Established	**pH:**	Between 7.0 and 12.0
Vapor Pressure:	Not Established	**Viscosity:**	Not Established
Physical State:	Paste		

When reported, vapor pressure of this product has been calculated theoretically based on its constituent makeup and has not been determined experimentally.

(See section 16 for abbreviation legend)

Section 10 - Stability And Reactivity

Conditions To Avoid: Excessive heat and freezing.

Incompatibility: Strong bases. Strong oxidizing agents.

Hazardous Decomposition Products: Normal decomposition products, i.e., COx, NOx.

Hazardous Polymerization: Hazardous polymerization will not occur under normal conditions.

Stability: Stable under normal conditions.

Section 11 - Toxicological Information

Product LD50: Not Established

Product LC50: Not Established

Carcinogenicity:

CAS No.	Chemical Name	ACGIH	OSHA	IARC	NTP	WT%
14808-60-7	Silica, crystalline	Suspected human carcinogen.	—	Human carcinogen.	Known carcinogen.	0.1-1.0

Significant Data with Possible Relevance to Humans: None

Section 12 - Ecological Information

Ecological Information: Ecological injuries are not known or expected under normal use.

Section 13 - Disposal Information

Disposal Information: Dispose of material in accordance with all federal, state and local regulations. State and Local regulations/restrictions are complex and may differ from Federal regulations. Responsibility for proper waste disposal is with the owner of the waste.

EPA Waste Code if Discarded (40 CFR Section 261): none

Section 14 - Transportation Information

DOT Proper Shipping Name:	Not Regulated	**Packing Group:**	N.A.
DOT Technical Name:	N.A.	**Hazard Subclass:**	N.A.
DOT Hazard Class:	N.A.	**DOT UN/NA Number:**	None

Note: The shipping information provided is applicable for domestic ground transport only. Different categorization may apply if shipped via other modes of transportation and/or to non-domestic destinations.

Section 15 - Regulatory Information

CERCLA - SARA Hazard Category:

This product has been reviewed according to the EPA 'Hazard Categories' promulgated under Sections 311 and 312 of the Superfund Amendment and Reauthorization Act of 1986 (SARA Title III) and is considered, under applicable definitions, to meet the following categories:

Immediate Health Hazard, Chronic Health Hazard

SARA Section 313:

This product contains the following substances subject to the reporting requirements of Section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986 and 40 CFR part 372:

None

Toxic Substances Control Act:

All ingredients in this product are either on TSCA inventory list, or otherwise exempt.

This product contains the following chemical substances subject to the reporting requirements of TSCA 12(B) if

exported from the United States:

Chemical Name	CAS Number	WT%
Dipropylene glycol methyl ether	34590-94-8	<0.02

U.S. State Regulations

New Jersey Right-to-Know:

The following materials are non-hazardous, but are among the top five components in this product:

Chemical Name	CAS Number	WT%
Water	7732-18-5	30-60

Pennsylvania Right-to-Know:

The following non-hazardous ingredients are present in the product at greater than 3%:

Chemical Name	CAS Number	WT%
Water	7732-18-5	30-60

California Proposition 65:

Warning: The following ingredients present in the product are known to the State of California to cause cancer:

Chemical Name	CAS Number	Definition	Date Listed	WT%
Silica, crystalline	14808-60-7	Carcinogenic.	Listed: October 1, 1988	0.1-1.0

Warning: The following ingredients present in the product are known to the State of California to cause birth defects or other reproductive harm:

None.

Section 16 - Other Information

HMIS Ratings:

Health: 1 Flammability: 1 Reactivity: 0 Personal Protection: X

VOLATILE ORGANIC COMPOUNDS, GR/LTR: 12.8 LB/GAL: 0.0 WT%: 0.425

REASON FOR REVISION: Periodic Update

PLASTIC COATINGS CORPORATION

MATERIAL SAFETY DATA SHEET

Revision Date: January 2, 2008

SECTION I- PRODUCT IDENTIFICATION

Product Name: **JAXSAN 600** white and light tints & **601** bright white.
Manufacturer: Plastic Coatings Corporation
Manufacturing Address: 4904 Teays Valley Rd., Scott Depot, WV 25560
Mailing Address: P. O. Box 1068, St. Albans, WV 25177
Telephone: (304) 755-9151 **FAX:** (304) 755-0229 **Emergency Telephone:** (304) 344-9218
Product Class: Acrylic latex elastomeric paint/ insulation sealant

HAZARDOUS MATERIAL IDENTIFICATION SYSTEM RATING

Health: 1 **Flammability:** 0 **Reactivity:** 0 **Personal Protection:** B

SECTION II - HAZARDOUS INGREDIENTS

INGREDIENT	CAS. NUMBER	WT.%	OCCUPATIONAL TLV	EXPOSURE LIMITS PEL

Jaxsan 600 and 601 does not contain reportable or significant amounts of hazardous materials as defined in 40 CFR part 300 or 219 CFR 1293.1200.

PRINCIPAL INGREDIENTS:

Acrylic latex	29129-78-0	None Established
Water	7732-18-5	None Established
Aluminia trihydrate	21645-51-2	None Established
Titanium dioxide	13463-67-7	None Established
Chlorinated paraffin	61788769	None Established

Volatile Organic Contents (VOC) as packaged minus water: 0.04 lb./gal. (5 gm./l.)

SECTION III - PHYSICAL DATA

Boiling point:	212 degrees F.	**Weight per gallon:**	11.5 pounds
Evaporation rate:	Same as water	**Percent volatile by volume:**	45
Vapor density:	Lighter than air	**pH:**	8-9.5
Typical appearance:	Heavy bodied fibered paint/mastic paste.		

SECTION IV - FIRE AND EXPLOSION HAZARD DATA

Flammability: Non-flammable when wet. Dry film is self-extinguishing.
Flash Point: Non-flammable when wet.
Extinguishing Media: Water, carbon dioxide, dry chemical
Special Fire Fighting Procedures: Do not breathe combustion products
Smoke may contain hazardous materials, including: carbon dioxide, carbon monoxide, and small amounts of hydrogen chloride. Wear fresh air breathing mask.

SECTION V HEALTH HAZARD DATA

Effects of overexposure: None known

Conditions to avoid: Do not ingest. Contains no heavy metals or significant amounts of toxic or hazardous materials. Repeated or prolonged contact with emulsion may cause mild skin irritation. Wash with soap and water, flush.

Primary routes of entry: Ingestion, inhalation, and eyes. May cause mild irritation to eye, mucus membranes and respiratory tract in poorly ventilated areas. Direct contact with eyes will cause irritation.

Emergency first aid procedures: May be harmful if swallowed in quantity. See physician immediately. If in contact with eyes flush well with copious quantities of water. Avoid rubbing eyes. See physician immediately. If respiratory irritation occurs, remove person to well ventilated area.

SECTION VI REACTIVITY DATA

Stability: Stable

Conditions or materials to avoid: None known

Hazardous decomposition products: Combustion may produce carbon dioxide, carbon monoxide, small amounts of hydrogen chloride. Hazardous polymerization: Will not occur.

SECTION VII SPILL PROCEDURES

Steps to be taken if material is spilled: Place material in water-resistant container.

Clean up residual material before it dries with soap and water.

Waste disposal: Dispose of waste in accordance with local, state and federal regulations and requirements for latex paint. Organizations to be notified in event of spill: Consult state and local authorities.

SECTION VIII SPECIAL PROTECTION INFORMATION

Respiratory protection: Wear particulate matter mask when spraying or when in close proximity to spray area.

Ventilation: Adequate for material to dry.

Eye protection: Wear goggles or wrap-around eyewear.

Other protective equipment: Water resistant gloves.

SECTION IX SPECIAL PRECAUTIONS

Precautions to be taken in handling and storing: Store above 32 degrees F. No special precautions are necessary to provide for safe use and storage of this product.

Secondary crystallization in some partings and vugs. - DECEW DOLOSTONE- - Closely Spaced Bedding plane joints 8.7-10.0, 11.2-13.0 - High angle fractures 8.7-8.9, 10.3-10.4, 11.3-11.5 and 12.0-12.1 ft.	
14 15 16 17 18		13.7 **R2** 18.8	61" 100%	42" 69%	Slight		R2 - Same - small vugs at 14.1, 14.6 and 16.2	
19 20							**Bottom of Boring at 18.7' BGS** **Completed as Open Rock Well**	

WATER LEVEL DATA

DATE	TIME	ELAPSED TIME	DEPTH (FT) BOTTOM OF CASING	DEPTH (FT) BOTTOM OF BORING	DEPTH (FT) WATER LEVEL
10/22/2010	8:00	16 hrs.	8.7-Ft.	18.7-Ft.	8.28-Ft.

OTHER REMARKS
Lost ~2 gal. water

GENERAL NOTES
1) For runs with greater than 100% recovery, RQD is computed using total core recovered.
2) Measured water levels may not represent actual groundwater levels.

			22	36.8	

OTHER REMARKS

GENERAL NOTES

1) For runs with greater than 100% recovery, RQD is computed using total core recovered.

2) Measured water levels may not represent actual groundwater levels.

	TP-TCE-03 11.5' W. Sidewall		Gray, CLAYEY SILT, wet, some cobble-sized angular rock, some fine gravel, some coarse gravel	5.2	
12			Bedrock at 11.8'		

WATER LEVEL DATA			BOTTOM OF CASING	BOTTOM OF PIT	GROUNDWATER ENCOUNTERED
DATE	TIME	ELAPSED TIME			
				11.8-Ft.	Approx. 10.8-ft. BGS

NOTES:
Installed piping for further injection. Filled in with 1' lifts
Soils below 8.5'BGS put in haz rolloff

GENERAL NOTES
1) STRATIFICATION LINES REPRESENT APPROXIMATE BOUNDARY BETWEEN SOIL TYPES, TRANSITIONS MAY BE GRADUAL.
2) WATER LEVEL READINGS HAVE BEEN MADE AT TIMES AND UNDER CONDITIONS STATED.
3) ABBREVIATIONS:
and = 35 to 50 %
some = 20 to 35%
little = 10 to 20%
trace = 1 to 10%
c = coarse
m = medium
f = fine
vf = very fine
BGS = Below the Ground Surface
NA = Not Applicable

Test Pit: TP-TCE-03

WELL I.D.: MW-6

Project Name: 690 Saint Paul Street
Location: 690 Saint Paul Street, Rochester, New York
Project No.: 209280
Sampled By: E. Dumrese
Date: 9/14/10
Weather: Sunny & Cool ~65

WELL SAMPLING INFORMATION

Well Diameter: 1-inch
Depth of Well: 9.87-feet
Measuring Point: Top of PVC
Pump Type: Peristaltic

Static Water Level: 7.82-feet
Length of Well Screen: 5.00-feet
Depth to Top of Pump: N/A
Tubing Type: HDPE

FIELD PARAMETER MEASUREMENT

Time	Pump Rate	Gallons Purged	pH	Temp °C	Conductivity (µS/cm)	Turbidity (NTU)	Dissolved O_2 (mg/L)	Redox (mV)	Depth to Water	Iron (II)	Comments
			+/- 0.1		+/- 3%		+ 10%	+/- 10 mV			

Total _____ Gallons Purged

Purge Time Start: _____ Purge Time End: _____ Final Static Water Level: _____

OBSERVATIONS

Notes:
- Due to low water volume, no purging completed.
- Grabbed sample.

SPECIALTY SHORT TERM DISCHARGE PERMIT

County of Monroe Pure Waters District No. 8575 ST- Permit No: ST-199

Expires: December 31, 2011

Fee: $125.00

Firm Name LaBella Associates, P.C.
Address 300 State Street, Rochester, NY 14614

Type of Business or Service Engineering Consulting

I. The above-named applicant is permitted to discharge wastes into the Pure Waters Sewer system or Tributary thereto as applied for by an application dated _____ and verified by the applicant except the Director of Pure Waters requires the following terms and conditions to govern the permitted discharge:

A. _____
B. _____
C. _____

II. The applicant further agrees to:

1. Accept and abide by all provisions of the Sewer Use Law of Monroe County and of all pertinent rules or regulations now in force or shall be adopted in the future.
2. Notify the Director of Pure Waters in writing of any revision to the plant sewer system or any change in industrial wastes discharge to the public sewers as listed in the application. The latter encompasses either (1) an increase or decrease in average daily volume or strength of wastes listed in the application or (2) new wastes that were not listed in the application.
3. Furnish the Director of Pure Waters upon request any additional information related to the installation or use of sewer or drain for which this permit is sought.
4. Operate and maintain any waste pretreatment facilities, as may be required as a condition of the acceptance into the public sewer of the industrial wastes involved, in an efficient manner at all times, and at no expense to the County.
5. Cooperate with the Director of Pure Waters or his representatives in their inspecting, sampling, and study of wastes, or the facilities provided for pretreatment.
6. Notify the Director of Pure Waters immediately of any accident, negligence, breakdown of pretreatment equipment, or other occurrence that occasions discharge to the public sewers of any wastes or process waters not covered by this permit.

690 SAINT PAUL ST
ROCHESTER, NY 14605

Re: Confirmation Number 5644810

Attention: John Baker

We are pleased to confirm CWM's approval of your waste material as described below. The attached profile for the waste materials was prepared by CWM based upon information provided by you. It is important that no changes be made to the profile without CWM's consent. If the profile meets with your approval, please call 1-716-286-1550 to schedule shipment of your waste materials.

CWM Profile Number:	NY303725 MDC
Approved Mgmt. Facility:	CWM MODEL CITY FACILITY or another CWM or CWM approved facility
Waste Name:	SOIL FROM SOLVENT AREA
Disposal Method:	Subtitle C Landfill
Disposal Price:	- $75.00 per ton (10 ton minimum) - Environmental Fee 3.0% - Disposal Fuel Surcharge applies, currently at 7.38% (varies weekly)
Taxes:	- NYS Sales tax: 8.0% - Town tax @ 6.0% of disposal
Transportation Price:	- Not quoted
Demurrage:	- N/A
Pricing Conditions:	- $200.00 minimum disposal fee per profile, per shipment (drummed wastes). - Surcharge for drums without profile marked on the drum $20/each. - Discrepant drum charge $3/drum per day after 14 days from notification. - Drum resample fee - $25/drum.

July 18, 2012

Re: Confirmation Number 5644810, CWMI Profile Number NY303725 MDC

Profile Expiration Date: 7/17/13

Special Conditions:

- Waste profile sheet numbers must appear on manifests
- No demurrage will be paid by CWM Chemical Services, Inc., for delays at Model City for on-site acceptance procedures when generator/customer arranges their own transportation.
- CWM Chemical Servies, L.L.C. (CWM) has all the necessary permits and licenses and is authorized for the management of the waste that has been characterized and identified by this profile.
- Special Land Disposal Notification and Certification Form must be properly executed and accompany first shipment of this waste. If EPA codes change, a profile modification and new Special Land Disposal Notification and Certification Form will be required.

Applicable state and local taxes are not included in these disposal prices. All wastes are priced as profiled, invoiced as actually received. Invoices shall be paid no later than thirty (30) days from the date of receipt. All terms are governed by the Agreement previously executed between our companies. The prices quoted above are subject to change by CWM upon thirty (30) days' prior written notice to you unless otherwise specifically provided or per the terms of our Agreement. If we have not previously concluded a Service Agreement with your company, one is enclosed for your convenience. Please sign and return it to us as soon as possible. Also, if 'Signature on File' does not appear on the signature line of the Waste Profile Sheet, please sign and return it before scheduling your material.

If you have any questions or would like to make changes to the profile, please contact your representative. Thank you for this opportunity to be of service.

Thom Conde

GENERATOR'S CERTIFICATION

I hereby certify that all information submitted in this and all attached documents contains true and accurate descriptions of this waste. Any sample submitted is representative as defined in 40 CFR 261 - Appendix I or by using an equivalent method. All relevant information regarding known or suspected hazards in the possession of the generator has been disclosed. I authorize CWM to obtain a sample from any waste shipment for purposes of recertification.

H. CHEMICAL WASTE MANAGEMENT CERTIFICATION

Chemical Waste Management, Inc. has all the necessary permits and licenses for the waste that has been characterized and identified by this approved profile.

Generator Name: GENESEE VALLEY REAL ESTATE Manifest Doc. No.: _____

Profile Number: NY303725 State Manifest No: _____

1. Is this waste a non-wastewater or wastewater? (See 40 CFR 268.2) Check ONE: Nonwastewater X Wastewater _
2. Identify ALL USEPA hazardous waste codes that apply to this waste shipment, as defined by 40 CFR 261. For each waste code, identify the corresponding subcategory, or check NONE if the waste code has no subcategory. Spent solvent treatment standards are listed on the following page. If F039, multi-source leachate applies, those constituents must be listed and attached by the generator. If D001-D043 requires treatment of the characteristic and meet 268.48 standards, then the underlying hazardous constituent(s) present in the waste must be listed and attached.

REF #	3. US EPA HAZARDOUS WASTE CODE(S)	4. SUBCATEGORY ENTER THE SUBCATEGORY DESCRIPTION. IF NOT APPLICABLE, SIMPLY CHECK NONE		5. HOW MUST THE WASTE BE MANAGED? ENTER LETTER FROM BELOW
		DESCRIPTION	NONE	
1	F002		X	D
2				
3				
4				

To identify F039 or D001-D043, underlying hazardous constituent(s), use the "F039/Underlying Hazardous Constituent Form" provided (CWM-2004) and check here: _
If no UHCs are present in the waste upon its initial generation check here: X
To list additional USEPA waste code(s) and subcategorie(s), use the supplemental sheet provided (CWM-2005-D) and check here: _
Disposal facility monitors for all UHCs check here _
If waste will be managed in a system regulated under the CWA, or a Class 1 injection well under the SDWA check here

HOW MUST THE WASTE BE MANAGED? In column 5 above, enter the letter (A, B1, B3, B4, B5, B6, C, D or E) below that describes how the waste must be managed to comply with the land disposal regulations (40 CFR 268.7). Please understand that if you enter the letter B1, B3, B4, B5, B6, or D you are making the appropriate certification as provided below. (States authorized by EPA to manage the LDR program may have regulatory citations different from the 40 CFR citations listed below. Where these regulatory citations differ, your certification will be deemed to refer to those state citations instead of the 40 CFR citations.

A. RESTRICTED WASTE REQUIRES TREATMENT
This waste must be treated to the applicable treatment standards set forth in 40 CFR 268.40.
__ For Hazardous Debris: "This hazardous debris is subject to the alternative treatment standards of 40 CFR 268.45."

B.1 RESTRICTED WASTE TREATED TO PERFORMANCE STANDARDS
"I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification. Based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the treatment process has been operated and maintained properly so as to comply with the treatment standards specified in 40 CFR 268.40 without impermissible dilution of the prohibited waste. I am aware there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

B.3 GOOD FAITH ANALYTICAL CERTIFICATION FOR INCINERATED ORGANICS
"I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification. Based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the nonwastewater organic constituents have been treated by combustion in units as specified in 268.42 Table 1. I have been unable to detect the nonwastewater organic constituents despite having used best good faith efforts to analyze for such constituents. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

B.4 DECHARACTERIZED WASTE REQUIRES TREATMENT FOR UNDERLYING HAZARDOUS CONSTITUENTS
"I certify under penalty of law that the waste has been treated in accordance with the requirements of 40 CFR 268.40 or 268.49, to remove the hazardous characteristic. This decharacterized waste contains underlying hazardous constituents that require further treatment to meet treatment standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

B.6 RESTRICTED DEBRIS TREATED TO ALTERNATE PERFORMANCE STANDARDS
"I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and believe that it has been maintained and operated properly so as to comply with treatment standards specified in 40 CFR 268.45 without impermissible dilution of the prohibited wastes. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

C. RESTRICTED WASTE SUBJECT TO A VARIANCE
This waste is subject to a national capacity variance, a treatability variance, or a case-by-case extension. Enter the effective date of prohibition in column 5 above.
__ For Hazardous Debris: "This hazardous debris is subject to the alternative treatment standards of 40 CFR Part 268.45."

D. RESTRICTED WASTE CAN BE LAND DISPOSED WITHOUT FURTHER TREATMENT
"I certify under penalty of law I have personally examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification that the waste complies with the treatment standards specified in 40 CFR Part 268 Subpart D. I believe that the information I submitted is true, accurate and complete. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

E. WASTE IS NOT CURRENTLY SUBJECT TO PART 268 RESTRICTIONS
This waste is a newly identified waste that is not currently subject to any 40 CFR Part 268 restrictions.

I hereby certify that all information submitted in this and all associated documents is complete and accurate, to the best of my knowledge and information.

Signature _____ Title _____ Date _____

SOLVENT

If the waste identified on the first page of this form is described by any of the following USEPA hazardous waste codes: F001, F002, F003, F004, F005, and all solvent constituents will not be monitored by the treater, then each constituent MUST be identified below by checking the appropriate box, and this page must accompany the shipment, along with the previous page of this form. If the waste code F039 describes this waste, then the corresponding list of constituents must be attached. If D001-D043 require treatment to 268.48 standards, then the underlying hazardous constituent(s) must also be attached.

SOLVENT WASTE TREATMENT STANDARDS [2]

F001 through F005 spent solvent constituents and their associated USEPA hazardous waste code(s).	Treatment Standard [1]		F001 through F005 spent solvent constituents and their associated USEPA hazardous waste code(s).	Treatment Standard [1]	
	Wastewaters	Nonwastewaters		Wastewaters	Nonwastewaters

1 All spent solvent treatment standards are measured through a total waste analysis (TCA), unless otherwise noted. Wastewater units are mg/l, nonwastewater are mg/kg.

2 For contaminated soils using the alternative soil treatment standards, the treatment standards for F001-F005 spent solvents must be a 90% reduction of constituents or less than 10 x the standards listed.

SUBCATEGORY REFERENCE

D001:

A. Ignitable characteristic wastes, except for the 40 CFR 261.21(a)(1) High TOC subcategory.
B. High TOC Ignitable characteristic liquids subcategory based on 40 CFR 261.21(a)(1) - Greater than or equal to 10% total organic carbon.

SPECIALTY SHORT TERM DISCHARGE PERMIT

County of Monroe Pure Waters District No. 8575 ST- Permit No: ST-214

Expires: 8/31/2012

Fee: $125.00

Firm Name LABELLA ASSOCIATES, P.C.
Address 300 STATE STREET
ROCHESTER, NY 14614

Type of Business or Service ENGINEERING CONSULTING

I. The above-named applicant is permitted to discharge wastes into the Pure Waters Sewer system or Tributary thereto as applied for by an application dated _____ and verified by the applicant except the Director of Pure Waters requires the following terms and conditions to govern the permitted discharge:

A. _____
B. _____
C. _____

II. The applicant further agrees to:

1. Accept and abide by all provisions of the Sewer Use Law of Monroe County and of all pertinent rules or regulations now in force or shall be adopted in the future.
2. Notify the Director of Pure Waters in writing of any revision to the plant sewer system or any change in industrial wastes discharge to the public sewers as listed in the application. The latter encompasses either (1) an increase or decrease in average daily volume or strength of wastes listed in the application or (2) new wastes that were not listed in the application.
3. Furnish the Director of Pure Waters upon request any additional information related to the installation or use of sewer or drain for which this permit is sought.
4. Operate and maintain any waste pretreatment facilities, as may be required as a condition of the acceptance into the public sewer of the industrial wastes involved, in an efficient manner at all times, and at no expense to the County.
5. Cooperate with the Director of Pure Waters or his representatives in their inspecting, sampling, and study of wastes, or the facilities provided for pretreatment.
6. Notify the Director of Pure Waters immediately of any accident, negligence, breakdown of pretreatment equipment, or other occurrence that occasions discharge to the public sewers of any wastes or process waters not covered by this permit.

Director of Environmental Services-Pure Waters
Monroe County

COUNTY OF MONROE
SEWER USE PERMIT ENCLOSURE

LaBella Associates, P.C.
300 State St.
Rochester, NY 14614

PERMIT NUMBER: ST-214
DISTRICT NUMBER: 8575

SITE LOCATION: 690 St. Paul St.
Rochester, NY
TYPE OF ACTIVITY: Soil Removal From a Former Industrial Site
SAMPLE POINT: Holding Tank

REQUIRED MONITORING

SELF MONITORING FREQUENCY: **Each and Every Discharge**

SAMPLING PROTOCOL: Sampling and analysis shall be performed in accordance with the techniques prescribed in 40 CFR Part 136 and amendments thereto. In the absence of 40 CFR Part 136 testing methodology, a New York State Department of Health, approved method is acceptable. A grab sample, collected from the above noted sample point, must be analyzed for the following:

Volatile Organic Compounds
Semi-Volatile Organic Compounds
Pb (total)

The summation of all volatile organic compounds and semi-organic volatile compounds reported greater than 10 µg/l shall not exceed 2.13 mg/L. Total lead shall not exceed 1.0 mg/L.

SPECIAL CONDITIONS:

1. **Sample results for each discharge must be reviewed and approved by Monroe County prior to discharge to the sanitary sewer system.**
2. **Discharge location must be approved by Monroe County prior to discharging.**
3. **All future discharges must be approved by Monroe County.**
4. **The discharge rate must not exceed 10 gpm unless an alternative rate is approved by Monroe County.**

APPENDIX 6

Laboratory Analytical Data and Data Usability Summary Reports

Data Usability Summary Report (DUSR)

690 Saint Paul St.
Labella Project #209280

Spectrum Analytical, Inc., North Kingstown, RI
Sample Delivery Group #L2359
December 12, 2012

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).
- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540/R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed		
				VOC[1]	SVOC[2]	Metals[3]/ Mercury[4]
BW-07	L2359-01	AQ	11/5/12	X	X	X
BW-08	L2359-02	AQ	11/5/12	X	X	X
MW-08	L2359-03	AQ	11/5/12	X		
BW-01	L2359-04	AQ	11/6/12	X	X	X
FIELD BLANK	L2359-05	AQ	11/5/12	X	X	X
TRIP BLANK	L2359-06	AQ	11/6/12	X		

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(4) Aqueous Mercury analyses were performed using USEPA Method SW846 7470A.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis
- System Monitoring/Surrogate Compound Recoveries
- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification
- Compound Quantitation
- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Instrument	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
V10	11/12/12 09:25	Bromoform	21.6	0.24	Action #1	BW-08 MW-08
V10	11/13/12 15:48	Bromoform Naphthalene	23.9 25.3	0.23 2.3	Action #1 Action #1	BW-07DL

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Instrument	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
V10	11/12/12 19:58	Tetrachloroethene	-25.3	0.26	Action #1	BW-08 MW-08

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	**Target Analyte(s)**	**Conc.**	**Flag sample results with a "U" if ≤ this value**	**Affected Sample(s)**
MB-69227	Acetone	45 ug/L	450 ug/L	BW-08 MW-08
FIELD BLANK	Acetone Methylene Chloride	3.7 ug/L 41 ug/L	37 ug/L 410 ug/L	BW-07 BW-01 BW-08 MW-08
TRIP BLANK	Methylene Chloride	1.2 ug/L	12 ug/L	All Samples

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria, with the following exceptions:

LCS ID	Compound	QC Criteria	LCS %R	Corrective Action	Affected Samples
LCS-69227	Acetone	40-140	169	Action #1	BW-08 MW-08
LCSD-69227	Acetone	40-140	159	Action #1	BW-08 MW-08

Action #1: Positive results are qualified "J", estimated and nondetected results should not be qualified.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Inst.	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
S3	11/6/12 15:11	2,4-Dimethylphenol 4-Chlorophenyl-phenylether Fluorene	29.0 20.9 21.4	0.34 0.91 1.6	Action #1 Action #1 Action #1	BW-07 BW-08 BW-01 FIELD BLANK

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Inst.	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
S3	11/14/12 10:01	Benzo(g,h,i)perylene	25.1	1.02	Action #1	BW-07
S3	11/15/12 11:43	Indeno(1,2,3-cd)pyrene	34.4	1.06	Action #1	BW-08
		Dibenzo(a,h)anthracene	31.0	1.04	Action #1	BW-01
		Benzo(g,h,i)perylene	33.4	1.08	Action #1	FIELD BLANK

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in any blank.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	**Target Analyte(s)**	**Conc.**	**Flag sample results with a "U" if ≤ this value**	**Affected Sample(s)**
FIELD BLANK	Di-n-butylphthalate	9.0 ug/L	45 ug/L	All Samples

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		**Criteria (%)**
Nitrobenzene-d5	S01	40-110
2-Fluorobiphenyl	S02	50-110
Terphenyl-d14	S03	50-135
Phenol-d5	S04	10-115
2-Fluorophenol	S05	20-110
2,4,6-Tribromophenol	S06	40-125

Project Sample ID	S01	S02	S03	S04	S05	S06	Positive Results	Non Detect (ND)
	%R	%R	%R	%R	%R	%R		
BW-01	77	89	43	20	32	89	J	UJ

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. All SVOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS and MS/MSD recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Metals

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project

samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in the associated blank sample.

Target compounds were not identified in associated blank samples at a concentration above the MDL for metals analyses, with the following exceptions:

Blank	**Target Analyte(s)**	**Conc.**	**Flag sample results with a "U" if ≤ this value**	**Affected Sample(s)**
MB-69280	Potassium Sodium	107 ug/L 34.5 ug/L	535 ug/L 173 ug/L	All Samples
FIELD BLANK	Sodium	738 ug/L	3690 ug/L	BW-01 BW-07 BW-08

Note: Preparation Blank associated samples include all samples analyzed within the sample analytical batch.

Interference Check Sample Analysis

The interference check sample solution percent recoveries (%Rs) fell within the method required control limits without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Analysis

The LCS %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

The MS/MSD %Rs fell within the method required control limits (75-125%) without exception. No qualification of the data is recommended.

Laboratory Duplicate Analysis

The laboratory duplicate percent differences (%Ds) fell within the method required control limits without exception. No qualification of the data is recommended.

ICP Serial Dilution Analysis

The ICP Serial Dilution %Ds fell within the method required control limits without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "B" qualifier, which indicates an estimated value because the result was between the RL and MDL, was changed to a "J" qualifier by the data reviewer.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)

690 Saint Paul St
Labella Project #209280

Spectrum Analytical, Inc., North Kingstown, RI
Sample Delivery Group #M0065
March 13, 2013

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Received By
LaBella Associates, P.C.
MAR 14 2013
Client:
Proj.#:

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).
- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540/R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed				
				VOC[1]	SVOC[2]	Pest.[3]	PCB[4]	Metals[5]/ Mercury[6]
BW-02	M0065-01	AQ	1/15/13	X	X			X
TRIP BLANK	M0065-02	AQ	1/15/13	X				
MW-05	M0065-03	AQ	1/18/13	X	X	X	X	X
FIELD BLANK	M0065-04	AQ	1/18/13	X	X			
TRIP BLANK 1/23/13	M0065-05	AQ	1/18/13	X				

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) Pesticide analyses were performed using USEPA Method SW846 8081B.
(4) PCB analyses were performed using USEPA Method SW846 8082A.
(5) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(6) Aqueous Mercury analyses were performed using USEPA Method SW846 7470A.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis
- System Monitoring/Surrogate Compound Recoveries
- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification

- Compound Quantitation
- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
FIELD BLANK	Methylene Chloride	5.3 ug/L	53 ug/L	BW-02 MW-05

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS and MS/MSD recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Inst.	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
S6	1/17/13 12:25	2,4-Dimethylphenol	21.3	0.32	Action #1	BW-02 MW-05 FIELD BLANK

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Inst.	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
S6	1/23/13 12:23	2,4-Dimethylphenol	26.5	0.41	Action #1	BW-02
S6	1/24/13 15:00	Pentachlorophenol	-44.3	0.11	Action #1	MW-05 FIELD BLANK

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in any blank.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Nitrobenzene-d5	S01	40-110
2-Fluorobiphenyl	S02	50-110
Terphenyl-d14	S03	50-135
Phenol-d5	S04	10-115
2-Fluorophenol	S05	20-110
2,4,6-Tribromophenol	S06	40-125

Project Sample ID	S01	S02	S03	S04	S05	S06	Positive Results	Non Detect (ND)
	%R	%R	%R	%R	%R	%R		
BW-02	84	81	**46**	20	31	90	J	UJ

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. All SVOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had SVOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Pesticides

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project

samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

The mid-point calibration INDC3RM run on 1/25/13 at 14:21 had %Ds outside the method specified limits for Heptachlor epoxide, Endosulfan I, 4,4'-DDE, Endrin, Endosulfan II, 4,4'-DDT, Methoxychlor, alpha-Chlordane, and gamma-Chlordane in Column 1 only. Because all results were nondetect and were reported from Column 2, no qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal the amount in any blank. Target compounds were not identified in associated blank samples at a concentration above the MDL without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Target Compound Identification

Target compounds that were detected in the project samples were detected in both GC columns at comparable concentrations (within 25%) that ensures no interfering analytes are present without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

PCBs

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal the amount in any blank. Target compounds were not identified in associated blank samples at a concentration above the MDL without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Target Compound Identification

Target compounds that were detected in the project samples were detected in both GC columns at comparable concentrations, ensuring no interfering analytes are present. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Metals

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in the associated blank sample.

Target compounds were not identified in associated blank samples at a concentration above the MDL for metals analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
MB-70252	Potassium Sodium	171 ug/L 72.5 ug/L	855 ug/L 363 ug/L	MW-05

Note: Preparation Blank associated samples include all samples analyzed within the sample analytical batch.

Interference Check Sample Analysis

The interference check sample solution percent recoveries (%Rs) fell within the method required control limits without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Analysis

The LCS %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

The MS/MSD %Rs fell within the method required control limits (75-125%) without exception. No qualification of the data is recommended.

Laboratory Duplicate Analysis

The laboratory duplicate percent differences (%Ds) fell within the method required control limits without exception. No qualification of the data is recommended.

ICP Serial Dilution Analysis

The ICP Serial Dilution %Ds fell within the method required control limits, with the following exceptions:

ICP Serial Dilution ID	Compound	%D	Corrective Action	Affected Samples
BW-02	Potassium	14	Action #1	BW-02
MW-05	Potassium	13	Action #1	MW-05

Action #1: Positive results were qualified as "J", estimated and nondetected results were qualified as "UJ", estimated detection limit.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "B" qualifier, which indicates an estimated value because the result was between the RL and MDL, was changed to a "J" qualifier by the data reviewer.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)

690 Saint Paul St.
Labella Project #209280

Spectrum Analytical, Inc., North Kingstown, RI
Sample Delivery Group #M0999
7/23/13

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).
- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540/R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed				
				VOC[1]	SVOC[2]	Dissolved Gases[3]	Metals[4]	Miscellaneous Parameters[5]
BW-4	M0999-01	AQ	6/18/13	X		X	X	X
BW-4 DUP		AQ	6/18/13	X		X	X	X
BW-5		AQ	6/18/13	X		X	X	X
BW-12		AQ	6/19/13	X		X	X	X
BW-7		AQ	6/19/13	X		X	X	X
BW-6		AQ	6/19/13	X		X	X	X
FIELD BLANK		AQ	6/19/13	X	X	X	X	X
SS-11		SOIL	6/19/13		X			
SS-11 DUP		SOIL	6/19/13		X			
TRIP BLANK		AQ	6/19/13	X				

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) Dissolved gas analyses were performed using USEPA Method RSK175.
(4) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(5) Analyses for anions Chloride, Nitrate, Nitrite, and Sulfate were performed using USEPA Method 300.0. Analyses for Total Sulfides were performed using Method SM 4500D. Analyses for Total Organic Carbon were performed using Method SM 5310B.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis
- System Monitoring/Surrogate Compound Recoveries

- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification
- Compound Quantitation
- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Instrument	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
V1	6/25/13 09:54	2-Chloroethyl vinyl ether	-31.5	0.07	Action #1	All VOC Samples

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	**Target Analyte(s)**	**Conc.**	**Flag sample results with a "U" if ≤ this value**	**Affected Sample(s)**
FIELD BLANK	Cis-1,2-Dichloroethene Trichloroethene	1.1 ug/L 2.8 ug/L	5.5 ug/L 14 ug/L	All VOC Samples except TRIP BLANK
FIELD BLANK	Methane	2.2 ug/L	11 ug/L	All VOC Samples

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample

result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in any blank.

Target compounds were not identified in associated blank samples at concentrations above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had SVOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Metals & Miscellaneous Parameters

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in the associated blank sample.

Target compounds were not identified in associated blank samples at a concentration above the MDL for metals analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
MB-72345	Iron	173 ug/L	865 ug/L	BW-4 BW-4 DUP BW-5
MB-72328	Chloride	0.123 mg/L	0.615 mg/L	BW-4 BW-4 DUP BW-5
MB-72351	Chloride	0.141 mg/L	0.705 mg/L	BW-12 BW-7 BW-6 FIELD BLANK

Note: Preparation Blank associated samples include all samples analyzed within the sample analytical batch.

Interference Check Sample Analysis

The interference check sample solution percent recoveries (%Rs) fell within the method required control limits without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Analysis

The LCS %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

The MS/MSD %Rs fell within the method required control limits (75-125%), with the following exceptions:

MS ID	Compound	MS %R	Corrective Action	Affected Samples
BW-5MS	Nitrogen, Nitrite Chloride	0 0	Action #1 Action #1	All Samples
BW-5MSD	Nitrogen, Nitrite Chloride	0 0	Action #1 Action #1	All Samples

Action #1: Positive results were qualified as "J", estimated and nondetected results were qualified as "R", rejected.

Laboratory Duplicate Analysis

The laboratory duplicate percent differences (%Ds) fell within the method required control limits without exception. No qualification of the data is recommended.

ICP Serial Dilution Analysis

The ICP Serial Dilution %Ds fell within the method required control limits without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. For miscellaneous parameters, the "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Miscellaneous parameter analyses samples that contained concentrations of target analytes at a reportable level in the associated method blanks were flagged by the laboratory with a "B". If the target analyte concentration was greater than 5X the amount in any blank, the "B" qualifier was not carried forward; if less than the 5X rule, the "B" qualifier was replaced with a "U".

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Client:
Proj.#:

February 14, 2011
Mr. Evan Dumrese
LaBella Associates, PC
300 State St.
Suite 201
Rochester, NY 14614

Dear Mr. Dumrese,

I would like to thank you for using Vali-Data of WNY, LLC for your data validation needs.

Attached is the DUSR report for 690 St. Paul St., SDG#J1983 and the corresponding invoice. Also, included are past due invoices. Late fees have been added for all invoices that are 90 or more days past due. If you have any questions, please feel free to contact me at (716) 655-6530. I look forward to working together in the future.

Sincerely,

Jodi Zimmerman
Vali-Data of WNY, LLC

Data Usability Summary Report

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, P.C., project located at 690 St. Paul St., Work order 208492, Mitkem Laboratories SDG ID#SJ1983, submitted to Vali-Data of WNY, LLC on December 10, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analyses using USEPA methods, 8260 (Volatile Organics), 8270 (SemiVolatile Organics), 8081 (Pesticides), 8082 (PCBs), 6010 (Inorganics), 7471(Mercury).

The first page entitled 'Laboratory Report' had the incorrect date recorded for 'Date Received'. An updated page is attached.

VOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified below in Narrative and Data Reporting Forms and Method Blank.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except the MDL's were not included in the original package. Those pages are attached.

The reported masses on the Form 1's for samples 690-SB-119(8.0'-11.4')-O, 690-SB-106A(8.0'-11.9')-O and 690-SB-122(8.0'-11')-O were incorrect. Updated Form 1's are attached and the concentrations of detected analytes have been updated on those forms.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met within ASP QC limits.

METHOD BLANK
All the criteria were met except Methylene Chloride was detected above the MDL, below the MRL in MB-54770 and was qualified as estimated in associated samples and spikes with detects.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed.

COMPOUND QUANTITATION
All criteria were met. (See Narrative and Data Reporting Forms, above)

INITIAL CALIBRATION
All criteria were met except the RRF value of Trichloroethene was outside QC limits in the initial calibration performed on 10/8/10 on instrument V2 and on 10/13/10 on instrument V6. ASP allows up to two target compounds to be outside QC limits, so no further action is required.

CONTINUING CALIBRATION
All criteria were met except the %D of Trichloroethene was outside ASP QC limits in VSTD0501P. The RRF of Trichloroethene was outside ASP QC limits in VSTD0502X, VSTD0506F and VSTD0506G. ASP allows up to two target compounds to be outside QC limits, so no further action is required.

GC/MS PERFORMANCE CHECK
All criteria were met.
The 'Ion Abundance Criteria' was incorrectly labeled for m/e 174 on Form 5A for file #V1L7200.D. The raw data is correct, so no further action is required.

SEMIVOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except the MDL's were not included in the original package. Those pages are attached.
Sample 690-SS-8A(2-2)-O should have been labeled 690-SS8A(2"-2')-O. This does not affect the data.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met within ASP QC limits.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed on these samples.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D of Pentachlorophenol was outside ASP QC limits in SSTD0503D and SSTD0503F. ASP allows up to four target analytes to be outside QC limits without further action.

GC/MS PERFORMANCE CHECK
All criteria were met.

PESTICIDES

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

Sulfur clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached. Sample 690-SS-8A(2-2)-O should have been labeled 690-SS8A(2"-2')-O. This does not affect the data.

The LCSD was erroneously crossed off of prep log.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times were met.

SURROGATE SPIKE RECOVERIES
All criteria were met.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met.

POLYCHLORINATED BIPHENYLS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

Sulfur and acid clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached. Sample 690-SS-8A(2-2)-O should have been labeled 690-SS8A(2"-2')-O. This does not affect the data.

The LCSD was erroneously crossed off of prep log.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria were met.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed on these samples.

COMPOUND QUANTITATION
All criteria were met except the %D between the columns was outside QC limits for Aroclor 1260 in 690-SB-104(2"-2')-O.

INITIAL CALIBRATION
All criteria were met except Form 6P included CS6 values for the surrogates in the original package. Those should not have been included since only a 5-point calibration is required. The incorrect value for Aroclor 1016 peak 1 at CS6 was included in the original package. An updated page is attached.

CONTINUING CALIBRATION
All criteria were met.

METALS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Sample
- MS
- Duplicate
- Field Duplicate
- Serial Dilution
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified below in MS/MSD, Duplicate, Serial Dilution and Calibration.

DATA COMPLETENESS

All criteria were met.

NARATIVE AND DATA REPORTING FORMS

All criteria were met.

Sample 690-SS-8A(2-2)-O should have been labeled 690-SS8A(2"-2')-O. This does not affect the data.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times were met.

METHOD BLANK

All criteria were met except Na was detected in MB-54713. Results of this target analyte in the samples were above the MRL, so no further action is required.

LABORATORY CONTROL SAMPLE

All criteria were met.

MS/MSD

All criteria were met except the %D of Sb and Pb were outside QC limits in 690-SS-8A(2-2)-OS and are qualified with an 'N'.

Sb and Pb were within QC limits in the post digest spike.

Mitkem does not include some commonly occurring target analytes in the spiking solution since the naturally occurring high concentrations tend to mask the spiking compound.

DUPLICATE

All criteria were met except the %RPD of Ca, Mg and V were outside QC limits in 690-SS-8A(2-2)-OD. These target analytes are qualified with a '*' in the samples.

FIELD DUPLICATE

No field duplicate was acquired.

SERIAL DILUTION

All criteria were met except the %D of Cr, Co, Fe, Pb, Mg, Mn, Ni and Na were outside QC limits in 690-SS-8A(2-2)-O and their concentrations were >50xMDL. These target analytes were qualified with an 'E' in the samples.

COMPOUND QUANITATION

All criteria were met.

CALIBRATION

All criteria were met except K and Co was detected in the ICB.
Na was detected in CCB3.
The results for these target analytes were above the MRL in all of the samples, so no further action is required.

MERCURY

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Duplicate
- Field Duplicate
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY
All criteria were met.

HOLDING TIMES
All holding times were met.

METHOD BLANK
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed on these samples.

DUPLICATE
No duplicate were performed on these samples.

FIELD DUPLICATE
No field duplicate was acquired.

COMPOUND QUANTITATION
All criteria were met.

CALIBRATION
All criteria were met.

GENERAL CHEMISTY

The following items/criteria were reviewed for this analytical suite:

- Dry Weight

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

Dry Weight

The percent moisture was recorded on a 'Percent Moisture and Percent Solids Report' but no Form 1's were submitted.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quaility control requirements for each method. The results relate only to the samples(s) as recevied. This report may not be reproduced, except in full, without written approval from Mitkem Laboratories.

All applicable NELAC or USEPA CLP requirments have been meet.

Mitkem Laboratories is accredited under the National Environmental Laboratory Approval Program (NELAP) and is certified by several States, as well as USEPA and US Department of Defense. The current list of our laboratory approvals and certifications is available on the Certifications page our web site at www.mitkem.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, P.C., project located at 690 St. Paul St., Work order 208492, Mitkem Laboratories SDG ID#SJ1785, submitted to Vali-Data of WNY, LLC on December 10, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analyses using USEPA methods, 8260 (Volatile Organics), 8270 (SemiVolatile Organics), 8081 (Pesticides), 8082 (PCBs), 6010 (Inorganics), 7470 (Mercury).

VOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Continuing Calibration.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except the MDL's were not included in the original package. Those pages are attached.
No receipt of 690-BW-4-0 on Mitkem's 'Volatile Samples Receiving Logbook' was recorded. Updated page is attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of Benzene and Toluene were outside QC limits, high, in LCSD-54167 and 2-Hexanone was outside QC limits, high, in LCS-54312. These target analytes would be considered biased high.

MS/MSD
No MS/MSD was performed on these samples.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met except the RRF value of Trichloroethene was outside QC limits in both of the initial calibrations. ASP allows up to two target compounds to be outside QC limits, so no further action is required.

CONTINUING CALIBRATION
All criteria were met except the %D of Naphthalene was outside ASP outer QC limits in VSTD0506R and should be qualified as estimated in all associated spikes, blank and samples.

GC/MS PERFORMANCE CHECK
All criteria were met.

SEMIVOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times

- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Internal Standard, Laboratory Control Samples, Initial Calibration and Continuing Calibration.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except the MDL's were not included in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria except Chrysene-d_{12} and Perylene-d_{12} in samples 690-BW-2-0 and 690-DUP-D. Associated target analytes in these samples should be qualified as estimated.

SURROGATE SPIKE RECOVERIES
All criteria were met except the %Rec of Terphenyl-d_{14} was outside the laboratory QC limits, low in 690-BW-1-0 but within ASP limits.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met except 4-Nitrophenol was above the MDL, below the MRL and was qualified as estimated in LCS-54150.

MS/MSD
No MS/MSD were performed.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met except the %RSD of 2,4-Dinitrophenol was outside ASP outer QC limits. 2,4-Dinitrophenol should be qualified as estimated in all blanks, spikes and samples. The %RSD of Dibenzo(a,h)anthracene was outside ASP QC limits. ASP allows up to four target analytes to be outside QC limits without further action.

CONTINUING CALIBRATION
All criteria were met except the %D of Nitrobenzene was outside ASP outer QC limits in SSTD0501Z and should be qualified as estimated in all associated blanks, spikes and samples.
The %D of Pentachlorophenol and Benzo(b) fluoranthene were outside ASP QC limits in SSTD0501Y. The %D of 2-Methylnaphthalene and Pyrene were outside ASP QC limits in SSTD0501Z. ASP allows for up to four target analytes to be outside QC limits without further action.

GC/MS PERFORMANCE CHECK
All criteria were met.

PESTICIDES

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Surrogate Spike Recoveries and Compound Quantitation, below.

Sulfur clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met except the %Rec of DCBP was outside QC limits low, off both columns in samples 690-BW-2-0, 690-BW-3-0, 690-DUP-D, 690-FIELD BLANK-0 and 690-BW-4-0. All target analytes in these samples should be qualified as estimated.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed.

COMPOUND QUANTITATION
All criteria were met except Dieldrin was recorded as detected in sample 690-BW-1-0 but no peak was detected at the appropriate retention time. An updated page is attached.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met.

POLYCHLORINATED BIPHENYLS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Surrogate Spike Recoveries.

Sulfur and acid clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

The %Rec of DCBP off column 1 in LCS-54151 was recorded incorrectly on Form II. An updated page is attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met except the %Rec of DCBP was outside laboratory QC limits low, off both columns in samples 690-BW-2-0, 690-BW-3-0, 690-DUP-D, 690-FIELD BLANK-0 and

690-BW-4-0. The %Rec of DCBP was outside ASP QC limits off both columns in samples 690-BW-2-0, 690-FIELD BLANK-0 and 690-BW-4-0. All target analytes in these samples should be qualified as estimated.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
All the criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D of the Aroclor 1016 peak 1 and TCMX, off column 2, were outside QC limits in AR16603DC. Column 1 should be used to calculate results for this target analyte and surrogate.

METALS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Sample
- MS
- Duplicate
- Field Duplicate
- Serial Dilution
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but cannot be considered a complete ASP category B package since no spike and duplicate were analyzed.

DATA COMPLETENESS
All criteria were met.

NARATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times were met.

METHOD BLANK
All criteria were met.

LABORATORY CONTROL SAMPLE
All criteria were met.

MS/MSD
No MS/MSD were performed.

DUPLICATE
No duplicate was performed.

FIELD DUPLICATE
All criteria were met.

SERIAL DILUTION
No Serial Dilution was performed on these samples.

COMPOUND QUANITATION
All criteria were met.

CALIBRATION
All criteria were met.

MERCURY

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Duplicate
- Field Duplicate
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but cannot be considered a complete ASP category B package since no spike and duplicate were analyzed.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY
All criteria were met.

HOLDING TIMES
All holding times were met.

METHOD BLANK
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed.

DUPLICATE
No duplicate was performed.

FIELD DUPLICATE
All criteria were met.

COMPOUND QUANTITATION
All criteria were met.

CALIBRATION
All criteria were met.

JAN 13 2011
Client: _____
Proj.#: _____

Dear Mr. Dumrese,

I would like to thank you for using Vali-Data of WNY, LLC for your data validation needs.

Attached is the DUSR report for 690 St. Paul St., SDG#J2146 and #J1785 and the corresponding invoice. Also, included are past due invoices. Late fees have been added for all invoices that are 90 or more days past due. If you have any questions, please feel free to contact me at (716) 655-6530. I look forward to working together in the future.

Sincerely,

Jodi Zimmerman
Vali-Data of WNY, LLC

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, P.C., project located at 690 St. Paul St., Work order 208492, Mitkem Laboratories SDG ID#SJ2146, submitted to Vali-Data of WNY, LLC on December 3, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analyses using USEPA methods, 8260 (Volatile Organics), 8270 (SemiVolatile Organics), 8081 (Pesticides), 8082 (PCBs), 6010 (Inorganics), 7470/7471 (Mercury).

VOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified below in Method Blank and Laboratory Control Sample.

Methanol extraction was performed on sample 690-BW-5 (2.0-4.0) and 690-SB-124 (10.0-10.4).

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except the MDL's were not included in the original package. Those pages are attached.

The instrument performance check for MB-55104 file #V6H7140.D was not included in the original package. That page is attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met except the %Rec of Toluene-d_8 was outside laboratory QC limits but within ASP QC limits in sample 690-BW-5(2.0-4.0).

METHOD BLANK
All the criteria were met except Methylene Chloride was detected above the MDL, below the reporting limit in MB-55192 and is qualified as estimated in the blank and associated spike and samples with detects.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate sample was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of Benzene was outside QC limits; low, in LCS-55181 and should be qualified as estimated in associated sample and spike.
The %RPD of Acetone was outside QC limits, in LCS/LCSD-55104. This target analyte was within QC limits in the respective LCS, so no further action is required.

MS/MSD
MS/MSD were performed in sequence with samples 690-BW-5-0, 690-BW-5(2.0-4.0)ME, 690-SB-124(10.0-10.4) and 690-BW-5-0DL.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met except the %RSD of Vinyl Chloride was outside ASP QC limits in the initial calibration, V6H7176. The RRF value of Trichloroethene was outside QC limits in all the initial calibrations. ASP allows up to two target compounds to be outside QC limits, so no further action is required.

CONTINUING CALIBRATION
All criteria were met except the %D of several target analytes were outside laboratory QC limits but within ASP QC limits in VSTD0502M and VSTD0506T.
The RRF of Trichloroethene was outside QC limits in VSTD0502M, VSTD0502N, VSTD0506T and VSTD0506X. ASP allows up to two target compounds to be outside QC limits.

GC/MS PERFORMANCE CHECK
All criteria were met.

SEMIVOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Holding Times, Surrogate Spike Recoveries, Laboratory Control Samples and Continuing Calibration.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except the MDL's were not included in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met except the extraction holding time for 690-BS-5-0RX was outside QC limits. All target analytes should be qualified as undetected estimated in 690-BS-5-0RX.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met except the %Rec of Phenol-d_5 was outside the QC limits, low in MB55059 and 690-BW-5-0. The %Rec of 2-Fluorophenol and 2,4,6-Tribromophenol were outside the QC limits, low in MB55059, LCS55059 and 690-BW-5-0. Acid non-detects should be considered unusable and acid detects should be qualified as estimated. The surrogate recoveries for LCSD55059 were acceptable.

Sample 690-BW-5-0 was rerun with acceptable surrogate recoveries. Additional blank and laboratory control samples were run with acceptable surrogate recoveries.

METHOD BLANK
All the criteria were met. (see Surrogate Spike Recoveries, above)

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec and %RPD of several target analytes were outside QC limits, low in LCS/LSD-55059 and would be qualified as undetected estimated in the associated sample, since they were not detected in any of the samples. The target analytes whose %Rec was outside QC limits, low in both LCS-55059 and LSD-55059 were qualified as unusable in Surrogate Spike Recovery, above.
The %Rec Naphthalene was outside QC limits, high in LCS/LCSD-55265 and would be considered biased high in the associated sample.
3-Nitroaniline and 4-Nitrophenol were detected above the MDL, below the MRL and are qualified as estimated in LCS/LCS-D55265. Several target analytes were detected above the MDL, below the MRL and are qualified as estimated in LCS/LCSD-55059. Several target analytes were not detected in LCS/LCSD-55059.

MS/MSD
No MS/MSD were performed on this sample.

COMPOUND QUANTITATION
All criteria were met. (see Surrogate Spike Recoveries, above)

INITIAL CALIBRATION
All criteria were met except the %RSD of Nitrobenzene and Naphthalene were outside ASP QC limits in the initial calibration performed on 11/5/10, instrument S1. The RRF was outside QC limits for 4-Chlorophenyl ethyl ether in the initial calibration performed on 11/5/10, instrument S1. ASP allows up to four target analytes to be outside QC limits without further action.

CONTINUING CALIBRATION
All criteria were met except the %D of Dibenzo(a,h)anthracene and Benzo(g,h,i)perylene, in SSTD0501M run on 11/8/10, were outside ASP QC limits. The RRF Benzo(g,h,i)perylene was outside QC limits in SSTD0501M run on 11/8/10. ASP allows for up to four target analytes to be outside QC limits without further action.
The RRF of 4-Chlorophenyl ethyl ether in SSTD0501M, run on 11/5/10, was outside ASP QC limits. ASP allows for up to four target analytes to be outside QC limits without further action.
The %D of 2,4-Dinitrotoluene and Fluoranthene were outside ASP QC limits in SSTD0503Y. ASP allows for up to four target analytes to be outside QC limits without further action.
The %D of 3,3-Dichlorobenzidine was outside ASP outer QC limits in SSTD0503Y and should be qualified as estimated in associated blanks, spikes and samples.

GC/MS PERFORMANCE CHECK
All criteria were met.

PESTICIDES

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

Sulfur clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of Endosulfan I was outside ASP limits off both columns in LCS/LCSD-55058. Mitkem determined that Endosulfan I degraded in the spiking solution. No further action is required.
The %Rec of Endosulfan Sulfate was outside ASP QC limits, high off column A in LCS-55058. The %Rec of gamma-Chlordane was outside ASP QC limits, high off column B in LCS-55058. These target analytes would be biased high off these respective columns.

MS/MSD
No MS/MSD were performed.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met.

POLYCHLORINATED BIPHENYLS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Continuing Calibration.

Sulfur and acid clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was acquired.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed on this sample.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D of the Aroclor 1016 peaks 1-3, Aroclor 1260 peaks1-3 and TCMX were outside QC limits off column 2 in AR16603GK. Column 1 should be used to calculate results for these target analytes and surrogate.

METALS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Sample
- MS
- Duplicate
- Field Duplicate
- Serial Dilution
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but cannot be considered a complete ASP category B package since no spike and duplicate were analyzed.

Medium level analysis was used on the sample and spikes.

DATA COMPLETENESS

All criteria were met.

NARATIVE AND DATA REPORTING FORMS

All criteria were met.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times were met.

METHOD BLANK
All criteria were met except Fe and Ag were detected in MB-55123. The concentration of Fe was > 10x blank concentration, so no further action is required. Ag was not detected in the sample, so no further action is required.

LABORATORY CONTROL SAMPLE
All criteria were met.

MS/MSD
No MS/MSD were performed.

DUPLICATE
No duplicate was performed.

FIELD DUPLICATE
No field duplicate was acquired.

SERIAL DILUTION
All criteria were met.

COMPOUND QUANITATION
All criteria were met.

CALIBRATION
All criteria were met.

MERCURY

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Duplicate
- Field Duplicate
- Compound Quantitation

- Calibration

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but cannot be considered a complete ASP category B package since no spike and duplicate were analyzed.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY
All criteria were met.

HOLDING TIMES
All holding times were met.

METHOD BLANK
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
No MS/MSD were performed.

DUPLICATE
No duplicate was performed.

FIELD DUPLICATE
No field duplicate was acquired.

COMPOUND QUANTITATION
All criteria were met.

CALIBRATION

All criteria were met.

GENERAL CHEMISTY

The following items/criteria were reviewed for this analytical suite:

- Percent Moisture

The item listed above was technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

PERCENT MOISTURE

All criteria were met. Forms 1's were not submitted, but %moisture was recorded on the Form 1's submitted for VOC analysis.

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for St. Paul St. Bldg. 14b, Centek Laboratories, LLC ID C0808019, submitted to Vali-Data of WNY, LLC on August 25, 2008. The laboratory performed the analysis using Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

ORGANICS

The following items/criteria were reviewed for this report:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain-of-Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Tuning
- Canister Certification Blanks
- Canister Certification Pressure Differences

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

Overall the data are acceptable for use. A few analytes have been qualified as estimated, as discussed in Laboratory Control Samples.

DATA COMPLETENESS

All criteria were met with the exception of the following:

- R qualifiers were not recorded for three compounds based on %RPD's as discussed in MS/MSD below.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met. Suggested amendments to the LCS and MS/MSD Corrective Action Reports stated in further items.

CHAIN-OF CUSTODY AND TRAFFIC REPORTS

All criteria were met except the following:

- Canister 282 did not appear on the Bottle Order but was used and reported throughout.

HOLDING TIMES

All holding times for the samples were met.

INTERNAL STANDARD (IS)

The IS did meet criteria for all samples once corrective action was performed

SURROGATE SPIKE RECOVERIES

Surrogate (BFB) recoveries were monitored and kept at ± 20%.

METHOD BLANK

All the criteria were met for the method blanks

FIELD AND TRIP BLANKS

There were no field QC samples associated with the samples in this report. All criteria for the trip blank were met.

FIELD DUPLICATE SAMPLE PRECISION

One set of field duplicate samples, C0808019-005 and -006 (ambient air), showed little difference in their results. Heptane was found in -006 and not -005, but the analyte was detected at or below quantitation limits. In the other set of duplicate samples, C0808019-003 and -004 (sub-slab air), several analytes were found in one sample and not the other. Concentrations of some of those analytes differed significantly between duplicate samples, while others did not.

LABORATORY CONTROL SAMPLES

All criteria were met for most compounds, including TCE and carbon tetrachloride; but out of range (± 30%) for a few others. None of the analytes that were out of range were detected in any sample. Several analytes fell out of range for the %RPD. None of the analytes that fell out of range for the %RPD were in any on the samples except one. The results for the analyte, 1,2-dichloroethane, which fell out of range and was in 5 samples, are acceptable for use; but are biased low.

MS/MSD

All criteria were met for most compounds. In the MS several compounds did not fit criteria. Of those, all but 3 could be due to the matrix. Of the three that were out of range and were probably not

influenced by the matrix, two were not found in any of the samples. The third, 2,2,4-trimethylpentane, which was found in samples C0808019-011, 012, 014, would be biased high. In the MSD several compounds did not fit criteria. Of those, all but six could be due to the matrix. Of the six that were out of range and probably not influenced by the matrix, none but the 2,2,4-trimethylpentane, were found in any sample. All were biased high except 1,4-dioxane, which was not detected in any sample. The % RPD for the MS/MSD met criteria for all but three compounds. Of those three, only cyclohexane fell out of %recovery range for either the MS or MSD. Cyclohexane biased high. Conclusion; results can be accepted.

COMPOUND QUANTITATION

All criteria were met.

INITIAL CALIBRATION

All criteria were met ($\leq$ 30%). Up to 3 compounds may exceed 30%.

CONTINUING CALIBRATION

All criteria were met ($\leq$ 30%) except two analytes of interest fell out of range (one on each of the two continuing calibration reports). Neither analyte was found in any sample.

GC/MS TUNING

All criteria were met.

CANISTER CERIFICATION BLANKS

QC Canister Cleaning and Maintenance logbooks were included along with their corresponding spectra and results.

CANISTER CERTIFICATION PRESSURES DIFFERENCES

All criteria were met.

Centek Laboratories, LLC

West Falls, NY 14170

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, P.C., project located at 690 St. Paul St., Mitkem Laboratories SDG ID#SH1886, submitted to Vali-Data of WNY, LLC on October 20, 2009. The laboratory performed the analyses using USEPA methods, 8260 (Volatile Organics), 8270 (Semi-Volatile Organics), 8082 (PCBs), 8081 (Pesticides), 6010 (Inorganics) and 7470 (Mercury).

VOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except MDL were not provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
Surrogate recoveries were acceptable except the %Rec of Dibromofluoromethane was outside QC limits, high for all samples and quality control samples except the Trip Blank and 690-tunnel-D-MSD. Any corresponding analytes would be considered biased high.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was performed.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of 1,2-Dicholorethane, 1,1,1-Trichloroethane and Bromodichloromethane were outside QC limits, high. These target analytes would be considered biased high.

MS/MSD
All criteria were met except the %Rec of 1,2-Dichloroethane was outside QC limits, high in 690-tunnel-D-MS.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D for Trichlorofluoromethane, 1,1,1-Trichloroethane, Carbon tetrachloride and 1,2-Dichloroethane were outside QC limits, high. These analytes were not detected in the samples but would be considered biased high.

GC/MS PERFORMANCE CHECK
All criteria were met.

SEMIVOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are usable but are qualified below in MS/MSD.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except MDL were not provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times were met.

INTERNAL STANDARD (IS)
All criteria were met.

SURROGATE SPIKE RECOVERIES
Surrogate recoveries were acceptable except the %Rec of 2-Fluorobiphenyl in SBLK3C, 2,4,6-Tribromophenol in 690-tunnel-D-MSD and Terphenyl-d14 in 690-ELEV-O were outside the QC limits.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
No field duplicate was performed.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of 2,4,5-Trichlorophenol, 2,4-Dinitrophenol, 4-Nitrophenol, Dibenzofuran and Benzo (a) anthracene were outside QC limits, high. None of these analytes were detected in the samples, but would have been considered biased high.

MS/MSD
All criteria were met except the %Rec of several target analytes were outside the QC limits in 690-tunnel-DMS/MSD. The %Rec of 4-Chloroaniline and 3,3'-Dichlorobenzidine were outside QC limits, low, and should be qualified as undetected-estimated in sample 690-tunnel-D.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met except the %RSD for Pentachlorophenol was outside QC limits. This analyte was not detected in the samples

CONTINUING CALIBRATION
All criteria were met except the %D for Hexachlorocyclopentadiene, 2,4-Dinitrophenol and 4-Nitrophenol were outside the QC limits. None of these analytes were detected in the samples.

GC/MS PERFORMANCE CHECK
All criteria were met.

PESTACIDES

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but should be updated as described below in MS/MSD and Compound Quantitation.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except MDL were not provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES

All criteria for the surrogate recoveries were met.

METHOD BLANK

All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION

No field duplicate was performed.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
All criteria were met except the %Rec of several target analytes were outside the QC limits, high. The %Rec of 4,4'-DDT and gamma-Chlordane were high off both columns in both 690-tunnel-DMS/MSD. These analytes would be considered biased high.
The %D between the two columns for several target analytes was outside the QC limits in both 690-tunnel-DMS/MSD. The results with the greatest concentration should be used.

COMPOUND QUANTITATION
All criteria were met except the results from the column providing the lowest concentration were recorded for 4,4'-DDT and Dieldrin in 690-tunnel-D. However, the results with the higher concentration should have been recorded. The %D between the two columns for Dieldrin in sample 690-tunnel-D was outside QC limits.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met.

POLYCHLORINATED BIPHENYLS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified below in Surrogate Spike Recovery.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except MDL were not provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met.

HOLDING TIMES

All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES

All criteria for the surrogate recoveries were met except DCBP off both columns was outside QC limits, low, in sample 690-ELEV-O. No target analytes were detected in the sample, so all target analytes should be undetected-estimated.

METHOD BLANK

All the criteria were met for the method blank.

FIELD DUPLICATE SAMPLE PRECISION

No field duplicate was performed.

LABORATORY CONTROL SAMPLES

All criteria were met.

MS/MSD

All criteria were met except the %Rec of Arochlor1260 was outside QC limits, high in 690-tunnel-DMS/MSD. Any affected target analyte would be considered biased high. The results with the highest concentration should be used.

COMPOUND QUANTITATION

All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met.

METALS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Duplicate
- Serial Dilution
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Method Blank.

DATA COMPLETENESS
All criteria were met.

NARATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met.

HOLDING TIMES
All criteria were met.

METHOD BLANK

All criteria were met except several target analytes were detected in the prep blank. These metals were qualified accordingly in the samples. All detects which are >MDL and <reporting limit are qualified with a 'B'.

Antimony, Vanadium and Zinc were detected in the initial calibration blank. Antimony, Magnesium, Nickel and Vanadium were detected in one or more of the continuing calibration blanks. Any of these metals that were detected above the MDL, below the reporting limit were qualified with a 'B'.

LABORATORY CONTROL SAMPLE

All criteria were met.

MS/MSD

All criteria were met except the %Rec for Iron, Lead, Thallium and Zinc were outside QC limits, low in 690-tunnel-DS.

All criteria were met except the %RPD of several target analytes were outside QC limits. Only Iron was outside QC limits in both 690-tunnel-DS and 690-tunnel-DD.

Post digest yielded acceptable results for all except Zinc. This suggests a matrix affect.

DUPLICATE

No field duplicate was performed.

SERIAL DILUTIONS

All criteria were met except the %D for Barium, Lead, Magnesium and Zinc in sample 690-tunnel-D were outside QC limits. These analytes were qualified with an 'E'.

COMPOUND QUANITATION

All criteria were met.

CALIBRATION

All criteria were met

MERCURY

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples

- MS
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY
All criteria were met.

HOLDING TIMES
All criteria were met.

METHOD BLANK
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
All criteria were met.

COMPOUND QUANTITATION
All criteria were met.

CALIBRATION
All criteria were met.

Dear Mr. Dumrese,

I would like to thank you for using Vali-Data of WNY, LLC for your data validation needs.

Attached is the DUSR report for 690 St. Paul St., SDG#H2626 and the corresponding invoice. If you have any questions, please feel free to contact me at (716) 655-6530. I look forward to working together in the future.

Sincerely,

Jodi Zimmerman
Vali-Data of WNY, LLC

Data Usability Summary Report

Vali-Data of WNY, LLC

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, P.C., project located at 690 St. Paul St., Work order 208492, Mitkem Laboratories SDG ID#H2626, submitted to Vali-Data of WNY, LLC on January 22, 2010. The laboratory performed the analyses using USEPA methods, 8260 (Volatile Organics), 8270 (Semi-Volatile Organics), 8082 (PCBs), 8081 (Pesticides), 6010 (Inorganics) and 7470 and 7471 (Mercury).

VOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified below in Surrogate Spike Recovery, Method Blank and Continuing Calibration.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except the MDL were not included in the original package. The Form 1's containing the TIC's was not included in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met except no sampling time was recorded for 690-SS-7(0"-2")-D. The date was recorded.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met except the %Rec of 1,2-Dichloroethane-d4 was outside QC limits, low in sample 690-SS-7(0"-2")-0. All associated target analytes should be qualified as estimated or undetected estimated.
The %Rec of Bromofluorobenzene was outside QC limits, high, in samples 690-SS-7(2"-2')-0MS/MSD. All associated detected target analytes would be considered biased high.

METHOD BLANK
All the criteria were met except Methylene Chloride was detected above the MDL, below the reporting limit in MB-48205 and is qualified as estimated in the blank and associated laboratory control samples and MS/SD. Methylene Chloride was not detected in the associated samples.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of 1,2-Dichlorobenzene and 2-Chloroethyl vinyl ether were outside QC limits in LCSD-48205. The %Rec of Acetone was outside QC limits, high, in LCS/SD-48342. Acetone would be considered biased high. The %RPD of Trichlorofluoromethane was outside QC limits.

MS/MSD
All criteria were met. (see Surrogate Spike Recoveries, above)

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D of Acetone was outside ASP QC outer limits in continuing calibration VSTD0501S. Acetone should be qualified as estimated or undetected estimated in all blanks, samples and spikes.
The %D of Tetrachloroethene was outside ASP QC limits in continuing calibration, VSTD0506N. ASP allows for 2 compounds to be outside QC limits.

GC/MS PERFORMANCE CHECK
All criteria were met.

SEMIVOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Internal Standard, Laboratory Control Samples, Initial Calibration and Continuing Calibration.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except MDL were not included in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (see VOC, above)

HOLDING TIMES
All holding times were met.

INTERNAL STANDARD (IS)
All criteria were met except Perylene-d12 was outside QC limits, low, in samples 690-SS-7(0"-2")-0 and 690-SS-7(0"-2")-0RE. All detected associated target are qualified as estimated. All non-detected target analytes should be qualified as unusable.

SURROGATE SPIKE RECOVERIES
All criteria were met except Terphenyl-d14 was outside QC limits in samples 690-SS-7(0"-2")-0 and 690-SS-7(0"-2")-0RE. ASP allows for one base/neutral surrogate to be outside QC limits.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met except the concentration of several of the detected target analytes was much larger in the duplicate then the initial sample. Anthracene and Indeno(1,2,3-cd)pyrene were detected in the field duplicate and not in the initial samples. This could be due to the heterogeneous nature of the soil sample.

LABORATORY CONTROL SAMPLES
All criteria were met except Hexachlorocyclopentadiene was outside QC limits, low, in LCS/SD-48222. Hexachlorocyclopentadiene was not detected in the associated sample, 690-FB-0, so should be qualified as undetected estimated.

MS/MSD
All criteria were met.

COMPOUND QUANTITATION
All criteria were met except TIC's were not recorded on the Form 1's. Those forms are attached. Indeno(1,2,3-cd)pyrene was detected in 690-SS-7(0"-2")-ORE and not in 690-SS-7(0"-2")-0.

INITIAL CALIBRATION
All criteria were met except the %RSD for Pentachlorophenol was outside ASP's QC outer limits and should be qualified as estimated in all samples, blanks and spikes.

CONTINUING CALIBRATION
All criteria were met except the %D of Benzo(g,h,i)perylene was outside QC limits in continuing calibration SSTD0501S. ASP allows the %D of up to 4 target analytes to outside QC limits as long as it is below the outer limit of 40%.
The %D of Hexachlorocyclopentadiene was outside the ASP's QC outer limits in continuing calibrations, SSTD0501T, SSTD0501U, SSTD0501W and should be qualified as estimated in all associated blanks, samples and spikes. The %D of 3,3-Dichlorobenzidine was outside the ASP's QC outer limits in continuing calibration SSTD0501U and should be qualified as estimated in all associated blanks, spikes and samples.

GC/MS PERFORMANCE CHECK
All criteria were met.

PESTICIDES

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries

- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (see VOC, above)

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met.

METHOD BLANK
All the criteria were met for the method blank.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
All criteria were met.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D of Dieldrin, Endosulfan II, Endrin ketone and 4,4'-DDD were outside QC limits off the confirmation column in continuing calibration INDC3HM.

POLYCHLORINATED BIPHENYLS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (see VOC, above)

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met.

METHOD BLANK
All the criteria were met for the method blank.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
All criteria were met.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D was outside QC limits for several peaks off the confirmation column.

METALS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Duplicate
- Serial Dilution
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Method Blank, MS/SD, Duplicate, Serial Dilution and Calibration.
Medium level analysis was performed on all samples.

DATA COMPLETENESS
All criteria were met.

NARATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (see VOC, above)

HOLDING TIMES
All criteria were met.

METHOD BLANK
All criteria were met except Aluminum, Iron, Manganese, Silver, Zinc and Sodium were detected in MB-48215. Aluminum, Iron and Zinc were detected in the sample above the MDL but less then 10x the reporting limit so are qualified with a 'B' in the associated sample. Silver was not detected in the samples.
Potassium, Magnesium, Aluminum, Antimony, Beryllium, Iron and Zinc were detected in MB-48255. Beryllium was detected in the associated samples above the MDL but less than 10x the reporting limit so should be qualified with a 'B'. Antimony was not detected in the associated samples.

LABORATORY CONTROL SAMPLE
All criteria were met.

MS/MSD
All criteria were met except the %Rec of Antimony was outside QC limits, low, in 690-SS-7(2"-2')-0S. Antimony was not detected in sample 690-SS-7(2"-2')-0. Mitkem has qualified it with an 'N'.

Post digest yielded an acceptable %Rec for Antimony so no further action is required.

DUPLICATE
All criteria were met except the %RPD was outside QC limits for Arsenic, Magnesium, Manganese and Thallium. The samples and duplicate concentrations of Arsenic and Thallium were <5x reporting limit, thus are within QC limits. Magnesium and Manganese should be considered estimated and were qualified by Mitkem Laboratories with a '*'.

SERIAL DILUTIONS
All criteria were met except the %D for all Aluminum, Arsenic, Barium, Beryllium, Chromium, Cobalt, Lead, Magnesium, Manganese, Nickel, Thallium, Vanadium and Zinc were outside the QC limits in the serial dilution. The concentrations of all the above target analytes were >50xMDL except Arsenic and Thallium in the original sample and thus are qualified as estimated, 'E', in the associated samples.

COMPOUND QUANITATION
All criteria were met.

CALIBRATION
All criteria were met except Beryllium and Silver were detected in the initial calibration blank performed on 12/24/09. These target analyltes were not detected in the sample, so no further action is required. Antimony was detected in the initial calibration performed on 12/29/09, but was not detected in any of the samples so no further action is required.

Antimony, Beryllium and Nickel were detected above the MDL, below the reporting limit in the Continuing Calibration Blank, CCB1 performed on 12/29/09. Antimony was not detected in the samples so no further action is required. Beryllium and Nickel were detected in the samples, so should be qualified as estimated in the associated samples.
Aluminum, Antimony, Beryllium and Vanadium were detected above the MDL, below the reporting limit in the Continuing Calibration Blank, CCB2 performed on 12/29/09. Antimony was not detected in the samples, so no further action is required. Aluminum, Beryllium and Vanadium were detected above the MDL, below the reporting limit and should be qualified as estimated in the associated samples.
The %R of Cadmium and Zinc in the ICP interference check sample was outside QC limits. However, the concentration was within QC limits in reference to the CRDL, so no further action is required.

MERCURY

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples
- MS
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (see VOC, above)

HOLDING TIMES
All criteria were met.

METHOD BLANK
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
All criteria were met.

COMPOUND QUANTITATION
All criteria were met.

CALIBRATION
All criteria were met.
