QC Flag Legend

T - Target compound detected outside RT window.
a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

Data Usability Summary Report

Vali-Data of WNY, LLC
1514 Davis Rd.
West Falls, NY 14170

690 St. Paul St.
Mitkem Laboratories #J1865
December 29, 2010
Sampling date: 9/22-24/10

Prepared by

Jodi Zimmerman, B.S.
Vali-Data of WNY, LLC
1514 Davis Rd.
West Falls, NY 14170

DELIVERABLES

This Data Usability Summary Report (DUSR) was prepared by evaluating the analytical data package for LaBella Associates, P.C., project located at 690 St. Paul St., Work order 208492, Mitkem Laboratories SDG ID#SJ1865, submitted to Vali-Data of WNY, LLC on December 10, 2010. This DUSR has been prepared in general compliance with NYSDEC Analytical Services Protocol and USEPA National Functional Guidelines. The laboratory performed the analyses using USEPA methods, 8260 (Volatile Organics), 8270 (SemiVolatile Organics), 8081 (Pesticides), 8082 (PCBs), 6010 (Inorganics), 7470/7471 (Mercury). These samples were not validated for Thorium analysis.

VOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but are qualified below in Method Blank and MS/MSD.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met except the MDL's were not included in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS

All criteria were met except there were a few inconsistencies in the dates between the Chains of Custody and the 'Laboratory Report'. The later was updated and is attached.

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met within ASP QC limits.

METHOD BLANK
All the criteria were met except Carbon disulfide and Naphthalene were detected above the MDL, below the MRL in MB-54505 and are qualified as estimated in associated samples and spikes with detects.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met except Acetone was detected above the MDL, below the MRL and is qualified as estimated in 690-SB-63(4.0' -6.3')-O but undetected in 690-SB-63(4.0' -6.3')-D. Benzene, Trichloroethene and Toluene were detected in 690-SB-30(8.0'-10.7')-O but undetected in 690-SB-30(8.0'-10.7')-D.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of 2-Hexanone in LCS-54546 and Naphthalene in LCS-54583 were outside QC limits, high. These target analytes would be considered biased high in the associated samples.

MS/MSD
All criteria were met except m&p-Xylene was outside laboratory QC limits, low, in 690-SB-27(8.0'-10.5')-OMS/MSD and should be qualified as estimated in 690-SB-27(8.0'-10.5')-O. 1,1,2-Trichloroethene was outside laboratory QC limits, high, in 690-SB-27(8.0'-10.5')-OMS/MSD. Vinyl acetate was outside QC limits in 690-SB-27(8.0'-10.5')-OMS.
Vinyl acetate and 2-Chloroethyl vinyl ether were outside laboratory QC limits, low, in 690-SB-29()8.0'-10.4')-MSD. Tetrachloroethene was outside laboratory QC limits in 690-SB-29()8.0'-10.4')-MS.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met except the RRF value of Trichloroethene was outside QC limits in the initial calibration performed on 10/4/10 on instrument V2. ASP allows up to two target compounds to be outside QC limits, so no further action is required.
The raw data for Bromoform in the original package was not correct. Updated pages are included. Forms 6 and 7 were correct, thus the data was not affected.

CONTINUING CALIBRATION
All criteria were met except the %D of Vinyl Chloride was outside ASP QC limits in VSTD0501F and VSTD0501J. The %D of Carbon tetrachloride was outside ASP QC limits in VSTD0501J. The RRF value of Trichloroethene was outside QC limits in VSTD0502P. ASP allows up to two target compounds to be outside QC limits, so no further action is required.

GC/MS PERFORMANCE CHECK
All criteria were met except tune V1L7120.D did not pass criteria and was reshot. The subsequent tune passed criteria. The former tune was included in the original package but should not have been. The later tune results are attached.

SEMIVOLATILE ORGANIC COMPOUNDS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Internal Standard (IS) Area Performance
- Surrogate Spike Recoveries
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration
- GC/MS Performance Check

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Laboratory Control Sample and MS/MSD.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except the MDL's were not included in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (See VOC, above)

HOLDING TIMES
All holding times for the samples were met.

INTERNAL STANDARD (IS)
The IS did meet criteria.

SURROGATE SPIKE RECOVERIES
All criteria were met.

METHOD BLANK
All the criteria were met. One TIC was detected in MB-54439.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met except 18 target analytes and 4 TIC's were detected in 690-SB-63(4.0'-6.3')-O but no target analytes and 11 TIC's were detected in 690-SB-63(4.0'-6.3')-D. Five TIC's were detected in 690-SB-30(8.0'-10.7')-O and no TIC's were detected in 690-SB-30(8.0'-10.7')-D.

LABORATORY CONTROL SAMPLES
All criteria were met except the %Rec of 4-Chloroaniline in LCS-54408 and Phenol in LCS-54382 and LCS-54439 were outside QC limits. 4-Chloroaniline and 4-Nitrophenol were detected above the MDL, below the MRL and are qualified as estimated in LCS-54408.

MS/MSD
All criteria were met except the %Rec of 2,4-Dinitrophenol and 4,6-Dinitro-2-methylphenol were outside the QC limits, low, in 690-SB-27(8.0'-10.5')-OMS/MSD and should be qualified as estimated in 690-SB-27(8.0'-10.5')-O. The %Rec of 2,4,5-Trichlorophenol was outside the QC limits in 690-SB-27(8.0'-10.5')-OMS.
Hexachlorocyclopentadiene and 4,6-Dinitro-2-methylphenol were detected above the MDL, below the MRL and was qualified as estimated in 690-SB-27(8.0'-10.5')-OMS/MSD. 2,4-Dinitrophenol was undetected in 690-SB-27(8.0'-10.5')-OMS/MSD.
2,4-Dinitrophenol and Pentachlorophenol were detected above the MDL, below the MRL and was qualified as estimated in 690-SB-29()8.0'-10.4')-MS/MSD.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met except the %RSD of Fluoranthene was outside ASP QC limits in the initial calibration performed on 9/30/10 on instrument S1. ASP allows up to four target analytes to be outside QC limits without further action.

CONTINUING CALIBRATION
All criteria were met except the %D of Pentachlorophenol was outside ASP QC limits in SSTD0501F and SSTD0503S. ASP allows up to four target analytes to be outside QC limits without further action.

GC/MS PERFORMANCE CHECK
All criteria were met.

PESTICIDES

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision
- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use.

Sulfur clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (See VOC, above)

HOLDING TIMES
All holding times were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
All criteria were met.

LABORATORY CONTROL SAMPLES
All criteria were met except the %D between the columns was outside QC limits for delta-BHC, Endosulfan I, Dieldrin, Endosulfan II, 4,4'-DDD, 4,4'-DDT, Methoxychlor, a-Chlordane and g-Chlordane in LCS-54381. The %D between columns was outside QC limits for 4,4'-DDD in LCS-54407. The %D between columns was outside QC limits for 4,4'-DDD and delta-BHC in LCS54443 and LSCD-54443. The %D between columns was outside QC limits for 4,4'-DDD, Aldrin, g-Chlordane and delta-BHC in LCSD-54407.

MS/MSD
All criteria were met except the %Rec and %RPD of several target analytes off column 1 were outside QC limits in 690-SB-27(8.0'-10.5-)-OMSD. All target analytes were within limits in 690-SB-27(8.0'-10.5-)-OMS off column 1. The %Rec of g-Chlordane and the %RPD of Heptachlor epoxide and g-Chlordane were outside QC limits, high, in 690-SB-27(8.0'-10.5-)-OMS/MSD off column 2. There were no detects in 690-SB-27(8.0'-10.5-)-O, so no further action is required.
The %Rec of several target analytes were outside QC limits in 690-SB-29()8.0'-10.4')MS/MSD off column 1. The %Rec and %RPD were outside QC limits, high, for g-Chlordane in 690-SB-29()8.0'-10.4')MS/MSD off column 2. There were no detects in 690-SB-29()8.0'-10.4') so no further action is required.
The %D between the columns was outside QC limits for several target analytes in 690-SB-27(8.0'-10.5-)-OMS/MSD and 690-SB-29()8.0'-10.4')MS/MSD.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D of Endrin Ketone was outside QC limits off column 2 in INDC3JI. The %D of 4,4'-DDT was outside QC limits off column 1 in INDC3JN. The column within QC limits should be used for these target analytes in associated blanks, spikes and samples.

POLYCHLORINATED BIPHENYLS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Surrogate Spike Recoveries
- Method Blank
- Field Duplicate Precision

- Laboratory Control Samples
- MS/MSD
- Compound Quantitation
- Initial Calibration
- Continuing Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above and qualified accordingly.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Continuing Calibration.

Sulfur and acid clean up was used for all samples, blanks and spikes.

Mitkem Laboratories reported the concentration of the target analytes from the column with the lower result.

DATA COMPLETENESS
All criteria were met.

NARRATIVE AND DATA REPORTING FORMS
All criteria were met except no MDL's were provided in the original package. Those pages are attached.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (See VOC, above)

HOLDING TIMES
All holding times for the samples were met.

SURROGATE SPIKE RECOVERIES
All criteria for the surrogate recoveries were met.

METHOD BLANK
All the criteria were met.

FIELD DUPLICATE SAMPLE PRECISION
All the criteria were met except Aroclor-1254 was detected in 690-SB-30(8.0'-10.7')-O but not in 690-SB-30(8.0'-10.7')-D.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
All criteria were met except the %RPD of Aroclor1016 in 690-SB-27(8.0'-10.5')-OMS/MSD was outside QC limits.

COMPOUND QUANTITATION
All criteria were met.

INITIAL CALIBRATION
All criteria were met.

CONTINUING CALIBRATION
All criteria were met except the %D of the Aroclor 1260 peak 1, off column 1, and Aroclor 1260 peaks 1-3 were outside QC limits in AR16603EJ. Aroclor 1260 should be qualified as estimated in associated blanks, spikes and samples.

METALS

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Sample
- MS
- Duplicate
- Field Duplicate
- Serial Dilution
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with the exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES
The data are acceptable for use but are qualified below in Method Blank, MS/MSD, Duplicate, Serial Dilution and Calibration.

DATA COMPLETENESS
All criteria were met.

NARATIVE AND DATA REPORTING FORMS
All criteria were met.

In the prep logbook 690-29()8.0'-10.4')D and 690-29()8.0'-10.4')S were crossed off but should not have been.

CHAIN OF CUSTODY AND TRAFFIC REPORTS
All criteria were met. (See VOC, above)

HOLDING TIMES
All holding times were met.

METHOD BLANK
All criteria were met except Mg was detected above the MDL, below the MRL and qualified with a 'B' in MB-54419.

LABORATORY CONTROL SAMPLE
All criteria were met.

MS/MSD
All criteria were met except the %D of Sb was outside QC limits in 690-SB-27(8.0'-10.5-)-OS and 690-SB-29()8.0'-10.4')S and is qualified with an 'N'.
Sb was within QC limits in the post digest spike.

Mitkem does not include some commonly occurring target analytes in the spiking solution since the naturally occurring high concentrations tend to mask the spiking compound.

DUPLICATE
All criteria were met except the %RPD of As, Cu and Mg were outside QC limits in 690-SB-27(8.0'-10.5-)-OD. The %RPD of As, Ca, Mg, Mn, Ni, K and Na were outside QC limits in 690-SB-29()8.0'-10.4')D. These target analytes are qualified with a '*' in the samples.

FIELD DUPLICATE
All criteria were met except Sb was detected in 690-SB-30(8.0'-10.7')-D but not in 690-SB-30(8.0'-10.7')-O.

SERIAL DILUTION
All criteria were met except the %D of Al, Ba, Cr, Co, Fe, Mg, Mn, Ni and V were outside QC limits in 690-SB-27(8.0'-10.5')-O. The %D of Ba, Cr, Co, Fe, Mg, Mn, Ni, V and Zn were outside QC limits in 690-SB-29()8.0'-10.4'). These target analytes were qualified with an 'E' in the samples.

COMPOUND QUANITATION
All criteria were met.

CALIBRATION

All criteria were met except Ca was detected in CCB1, CCB2 and CCB7.
Co, V and Ba were detected in CCB3.
Ba and Ca were detected in CCB5.
Ba, Co and Ni were detected in CCB6.
Ba was detected in CCB9.
The results for these target analytes were >MRL in all samples except, Co in sample 690-SB-59(0.4'-4.0')-O was above the MDL, below the MRL and should be qualified as undetected.

MERCURY

The following items/criteria were reviewed for this analytical suite:

- Data Completeness
- Narrative and Data Reporting Forms
- Chain of Custody and Traffic Reports
- Holding Times
- Method Blank
- Laboratory Control Samples
- MS/MSD
- Duplicate
- Field Duplicate
- Compound Quantitation
- Calibration

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The data are acceptable for use but there was no H_2O MS/MSD or H_2O Duplicate performed in sequence with the H_2O samples, so ASP category B criteria have not been fulfilled.

DATA COMPLETENESS

All criteria were met.

NARRATIVE AND DATA REPORTING FORMS

All criteria were met.

CHAIN OF CUSTODY

All criteria were met. (See VOC, above)

HOLDING TIMES
All holding times were met.

METHOD BLANK
All criteria were met except Hg was detected in MB-54520 above the MDL, below the MRL. Hg was not detected in the associated samples.

LABORATORY CONTROL SAMPLES
All criteria were met.

MS/MSD
All criteria were met except no MS/MSD were performed on the H_2O samples.

DUPLICATE
All criteria were met except no duplicate was performed on the H_2O samples

FIELD DUPLICATE
All criteria were met.

COMPOUND QUANTITATION
All criteria were met.

CALIBRATION
All criteria were met.

GENERAL CHEMISTY

The following items/criteria were reviewed for this analytical suite:

- Dry Weight

The items listed above were technically in compliance with the method and SOP criteria with any exceptions discussed in the text below. The data have been reviewed according to the procedures outlined above.

Dry Weight

The percent moisture was recorded on a 'Percent Moisture and Percent Solids Report' but no Form 1's were submitted.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as recevied. This report may not be reproduced, except in full, without written approval from Mitkem Laboratories.

All applicable NELAC or USEPA CLP requirments have been meet.

Mitkem Laboratories is accredited under the National Environmental Laboratory Approval Program (NELAP) and is certified by several States, as well as USEPA and US Department of Defense. The current list of our laboratory approvals and certifications is available on the Certifications page our web site at www.mitkem.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

QC Flag Legend

T - Target compound detected outside RT window.
a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

Data Usability Summary Report (DUSR)

690 Saint Paul St.
Labella Project #209280

Spectrum Analytical, Inc., Warwick, RI
Sample Delivery Group #L0469
April 13, 2012

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed				
				VOC[1]	SVOC[2]	Pest.[3]	PCB[4]	Metals[5]/ Mercury[6]
BW-5 PDB 8.7'-10'	L0469-01	AQ	3/8/12	X				
BW-5 PDB 8.7'-10' DUPE	L0469-02	AQ	3/8/12	X				
BW-5 PDB 15'-17'	L0469-03	AQ	3/8/12	X				

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) Pesticide analyses were performed using USEPA Method SW846 8081B.
(4) PCB analyses were performed using USEPA Method SW846 8082A.
(5) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(6) Soil Mercury analyses were performed using USEPA Method SW846 7471B. Aqueous Mercury analyses were performed using USEPA Method SW846 7470A.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis
- System Monitoring/Surrogate Compound Recoveries
- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification

- Compound Quantitation
- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Inst.	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
V1	3/16/12 07:24	Naphthalene 2-Chloroethyl vinyl ether	30.0 48.9	1.6 0.012	Action #1 Action #2	BW-5 PDB 8.7'-10' BW-5 PDB 8.7'-10' DUPE BW-5 PDB 15'-17'
V5	3/6/12 10:42	2-Chloroethyl vinyl ether	27.3	0.085	Action #1	BW-5 PDB 8.7'-10' DL BW-5 PDB 8.7'-10' DUPE DL BW-5 PDB 15'-17' DL

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.
Action #2: Positive results are qualified "J", estimated and nondetected analytes as "R", rejected.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Inst.	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
V1	3/19/12 10:14	1,1,1-Trichloroethane Carbon Tetrachloride Bromoform	34.8 44.8 26.7	0.28 0.25 0.33	Action #1 Action #1 Action #1	BW-5 PDB 8.7'-10' BW-5 PDB 8.7'-10' DUPE BW-5 PDB 15'-17'
V5	3/21/12 07:14	1,1,2,2-Tetrachloroethane 2-Chloroethyl vinyl ether	-25.6 47.7	0.75 0.13	Action #1 Action #1	BW-5 PDB 8.7'-10' DL BW-5 PDB 8.7'-10' DUPE DL BW-5 PDB 15'-17' DL

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Dibromofluoromethane	S01	85-115
1,2-Dichloroethane-d4	S02	70-120
Toluene-d8	S03	85-120
Bromofluorobenzene	S04	75-120

Project Sample ID	S01 %R	S02 %R	S03 %R	S04 %R	Positive Results	Non Detect (ND)
BW-5 PDB 8.7'-10' DL	**123**	109	85	104	J	No Qual
BW-5 PDB 8.7'-10' DUPE DL	108	102	**84**	106	J	UJ
BW-5 PDB 15'-17' DL	**121**	102	86	109	J	No Qual

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. All VOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria, with the following exceptions:

LCS ID	Compound	QC Criteria	LCS %R	Corrective Action	Affected Samples
LCS-65170	Bromoform	70-130	131	Action #1	BW-5 PDB 8.7'-10' BW-5 PDB 8.7'-10' DUPE BW-5 PDB 15'-17'

Action #1: Positive results are qualified "J", estimated and nondetected results should not be qualified.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)

690 Saint Paul St.
Labella Project #209280

Spectrum Analytical, Inc., Warwick, RI
Sample Delivery Group #L0368
April 13, 2012

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed				
				VOC[1]	SVOC[2]	Pest.[3]	PCB[4]	Metals[5]/ Mercury[6]
BW-11	L0368-01	AQ	2/22/12	X	X			
BW-9	L0368-02	AQ	2/22/12	X	X			
BW-9 DUP	L0368-03	AQ	2/22/12	X				
BW-12	L0368-04	AQ	2/22/12	X	X			

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) Pesticide analyses were performed using USEPA Method SW846 8081B.
(4) PCB analyses were performed using USEPA Method SW846 8082A.
(5) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(6) Soil Mercury analyses were performed using USEPA Method SW846 7471B. Aqueous Mercury analyses were performed using USEPA Method SW846 7470A.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis
- System Monitoring/Surrogate Compound Recoveries
- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification
- Compound Quantitation
- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Instrument	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
V10	2/28/12 09:08	Bromomethane 2-Chloroethyl vinyl ether	29.1 214.7	0.11 0.02	Action #1 Action #2	BW-11 BW-9 BW-9 DUP BW-12 BW-11 DL

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.
Action #2: Positive results are qualified "J", estimated and nondetected analytes as "R", rejected.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Instrument	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
V10	2/29/12 08:46	Bromomethane 2-Chloroethyl vinyl ether	-45.5 -0.4	0.06 0.002	Action #1 Action #2	BW-11 BW-9 BW-9 DUP BW-12
V10	3/1/12 12:44	Bromomethane 2-Chloroethyl vinyl ether	-34.4 -2.4	0.07 0.002	Action #1 Action #2	BW-11 DL

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.
Action #2: Positive results are qualified "J", estimated and nondetected analytes as "R", rejected.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent

recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Inst.	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
S3	12/27/11 12:13	2,4-Dimethylphenol	36.2	0.27	Action #1	BW-11 BW-9 BW-12

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Inst.	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
S3	2/27/12 13:00	Nitrobenzene 4-Nitrophenol	45.4 47.3	0.44 0.23	Action #1 Action #1	BW-11 BW-9 BW-12

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in any blank.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Nitrobenzene-d5	S01	40-110
2-Fluorobiphenyl	S02	50-110
Terphenyl-d14	S03	50-135
Phenol-d5	S04	10-115
2-Fluorophenol	S05	20-110
2,4,6-Tribromophenol	S06	40-125

Project Sample ID	S01	S02	S03	S04	S05	S06	Positive Results	Non Detect (ND)
	%R	%R	%R	%R	%R	%R		
BW-11	90	82	**44**	19	34	123	J	UJ
BW-9	78	77	**33**	20	33	117	J	UJ
BW-12	84	74	**46**	21	34	114	J	UJ

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. All SVOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) Recoveries

LCS recoveries were within the method specific criteria, with the following exceptions:

LCS ID	Compound	QC Criteria	LCS %R	Corrective Action	Affected Samples
LCS-64797	Nitrobenzene 4-Nitrophenol	45-110 0-125	116 129	Action #1 Action #1	BW-11 BW-9 BW-12
LCSD-64797	Nitrobenzene 4-Nitrophenol	45-110 0-125	118 131	Action #1 Action #1	BW-11 BW-9 BW-12

Action #1: Positive results are qualified "J", estimated and nondetected results should not be qualified.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)

690 Saint Paul St
Labella Project #209280

Spectrum Analytical, Inc., Warwick, RI
Sample Delivery Group #L0821
June 9, 2012

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Received By
LaBella Associates, P.C.
JUN 12 2012
Client:
Proj.#:

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed				
				VOC[1]	SVOC[2]	Pest.[3]	PCB[4]	Metals[5]/ Mercury[6]
BW-10	L0821-01	AQ	4/19/12	X	X			
BW-10DUP	L0821-02	AQ	4/19/12	X				
REC-B-EAST	L0821-03	AQ	4/19/12	X	X			
REC-B-WEST	L0821-04	AQ	4/19/12	X	X			
BW-1	L0821-05	AQ	4/19/12	X	X			

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) Pesticide analyses were performed using USEPA Method SW846 8081B.
(4) PCB analyses were performed using USEPA Method SW846 8082A.
(5) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(6) Soil Mercury analyses were performed using USEPA Method SW846 7471B. Aqueous Mercury analyses were performed using USEPA Method SW846 7470A.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis
- System Monitoring/Surrogate Compound Recoveries
- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification
- Compound Quantitation

- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in any blank.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)

690 Saint Paul St
Labella Project #209280

Spectrum Analytical, Inc., North Kingstown, RI
Sample Delivery Group #L2324
December 8, 2012

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).
- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540/R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed		
				VOC[1]	SVOC[2]	Metals[3]/ Mercury[4]
REC-B-EAST	L2324-01	AQ	10/30/12	X	X	
BW-10	L2324-02	AQ	10/30/12	X	X	X

BW-11	L2324-04	AQ	10/29/12	X		X
BW-12	L2324-05	AQ	10/29/12	X		X
BW-04	L2324-06	AQ	10/29/12	X		X
BW-03	L2324-07	AQ	10/29/12	X		X
FIELD BLANK 10/30/12	L2324-08	AQ	10/30/12		X	
FIELD BLANK 10/29/12	L2324-09	AQ	10/29/12	X		X
DUP	L2324-10	AQ	10/30/12	X		X

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(4) Aqueous Mercury analyses were performed using USEPA Method SW846 7470A.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis
- System Monitoring/Surrogate Compound Recoveries

- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification
- Compound Quantitation
- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied

to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Inst.	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
S3	11/6/12 15:11	2,4-Dimethylphenol	29.0	0.34	Action #1	REC-B-EAST
		4-Chlorophenyl-phenylether	20.9	0.91	Action #1	BW-10
		Fluorene	21.4	1.6	Action #1	FB-10/30/12

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in any blank.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
FB-10/30/12	Di-n-butylphthalate	11 ug/L	55 ug/L	REC-B-EAST BW-10
MB-69142	Bis(2-ethylhexyl)phthalate	1.4 ug/L	7.0 ug/L	REC-B-EAST BW-10 FB-10/30/12

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Nitrobenzene-d5	S01	40-110
2-Fluorobiphenol	S02	50-110
Terphenyl-d14	S03	50-135
Phenol-d5	S04	10-115
2-Fluorophenol	S05	20-110
2,4,6-Tribromophenol	S06	40-125

Project Sample ID	S01 %R	S02 %R	S03 %R	S04 %R	S05 %R	S06 %R	Positive Results	Non Detect (ND)
BW-10	78	82	35	22	36	86	J	UJ

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. All SVOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) Recoveries

LCS recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Organic analyses samples that contained concentrations of target analytes at a reportable level in the associated method blanks were flagged by the laboratory with a "B". If the target analyte concentration was greater than 5X the amount in any blank, the "B" qualifier was not carried forward; if less than the 5X rule, the "B" qualifier was replaced with a "U".

Metals

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project

samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in the associated blank sample.

Target compounds were not identified in associated blank samples at a concentration above the MDL for metals analyses, with the following exceptions:

Blank	**Target Analyte(s)**	**Conc.**	**Flag sample results with a "U" if ≤ this value**	**Affected Sample(s)**
FB-10/29/12	Mercury Sodium	0.032 ug/L 159 ug/L	0.16 ug/L 795 ug/L	BW-03 BW-04 BW-06 BW-10 BW-11 BW-12 DUP
MB-69213	Potassium	124 ug/L	620 ug/L	All Samples

Note: Preparation Blank associated samples include all samples analyzed within the sample analytical batch.

Interference Check Sample Analysis

The interference check sample solution percent recoveries (%Rs) fell within the method required control limits without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Analysis

The LCS %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

The MS/MSD %Rs fell within the method required control limits (75-125%) without exception. No qualification of the data is recommended.

Laboratory Duplicate Analysis

The laboratory duplicate percent differences (%Ds) fell within the method required control limits without exception. No qualification of the data is recommended.

ICP Serial Dilution Analysis

The ICP Serial Dilution %Ds fell within the method required control limits without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "B" qualifier, which indicates an estimated value because the result was between the RL and MDL, was changed to a "J" qualifier by the data reviewer.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)

690 Saint Paul St
Labella Project #209280

Spectrum Analytical, Inc., North Kingstown, RI
Sample Delivery Group #L2340
December 9, 2012

Prepared by:
Ethan Lee
LaBella Associates, P.C.
300 State St
Rochester, NY 14614

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from the following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004).
- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540/R-04-004).

And method protocol criteria were applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Lab ID	Matrix	Sample Date	Analysis Performed				
				VOC[1]	SVOC[2]	Pest.[3]	PCB[4]	Metals[5]/ Mercury[6]
MW-07	L2340-01	AQ	11/2/12	X	X	X	X	X
MW-06	L2340-02	AQ	11/2/12	X	X	X	X	X
BW-09	L2340-03	AQ	11/2/12	X				X
REC-B-W	L2340-04	AQ	11/2/12	X	X			
MW-10	L2340-05	AQ	11/1/12	X	X	X	X	X
BW-13	L2340-06	AQ	11/1/12	X				
MW-11	L2340-07	AQ	11/1/12	X	X			
MW-09	L2340-08	AQ	11/1/12	X	X	X	X	X
BW-5	L2340-09	AQ	11/1/12	X		X		X
FIELD BLANK	L2340-10	AQ	11/2/12	X	X	X	X	X
TRIP BLANK	L2340-11	AQ	11/2/12	X				

(1) VOC analyses were performed using USEPA Method SW846 8260B.
(2) SVOC analyses were performed using USEPA Method SW846 8270C.
(3) Pesticide analyses were performed using USEPA Method SW846 8081B.
(4) PCB analyses were performed using USEPA Method SW846 8082A.
(5) TAL Metals analyses were performed using USEPA Method SW846 6010B.
(6) Mercury analyses were performed using USEPA Method SW846 7470A.

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed:

- Sample Data Reporting Format
- Preservation and Holding Time Compliance
- GC/MS Instrument Performance Check
- Initial Calibration Verification (ICV)
- Continuing Calibration Verification (CCV)
- Blank Sample Analysis

- System Monitoring/Surrogate Compound Recoveries
- Laboratory Control Sample (LCS) Recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries
- Internal Standards
- Target Compound Identification
- Compound Quantitation
- Data Qualifiers
- Summary

Volatile Organic Compounds (VOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Instrument	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
V10	11/12/12 09:25	Bromoform	21.6	0.24	Action #1	MW-06 BW-09 REC-B-W
V10	11/13/12 15:48	Bromoform Naphthalene	23.9 25.3	0.23 2.3	Action #1 Action #1	MW-07DL BW-5DL

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Instrument	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
V10	11/12/12 19:58	Tetrachloroethene	-25.3	0.26	Action #1	MW-06 BW-09 REC-B-W

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for the common laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane), or 5 times (5X) the amount for other target compounds.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
FIELD BLANK	Methylene Chloride	32 ug/L	320 ug/L	MW-07 MW-10 BW-13 MW-11 MW-09 BW-5 MW-06 BW-09 REC-B-W MW-07DL BW-5DL
TRIP BLANK	Methylene Chloride	1.1 ug/L	11 ug/L	All Samples
MB-69227	Methylene Chloride	45 ug/L	450 ug/L	MW-06 BW-09 REC-B-W

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS recoveries were within the method specific criteria, with the following exceptions:

LCS ID	Compound	QC Criteria	LCS %R	Corrective Action	Affected Samples
LCS-69227	Acetone	40-140	169	Action #1	MW-06 BW-09 REC-B-W
LCSD-69227	Acetone	40-140	159	Action #1	MW-06 BW-09 REC-B-W

Action #1: Positive results are qualified "J", estimated and nondetected results should not be qualified.

MS/MSD recovery data alone cannot be used to evaluate precision or accuracy of individual samples. Although the associated MS and MSD samples had VOC compounds with percent

recoveries outside of the method specific criteria, due to the LCS recoveries being within the criteria, no qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Compounds detected at levels above the calibration range of the instrument were qualified "E" by the laboratory. The samples were then re-analyzed at a dilution to bring the concentration within the calibration range of the instrument. Both results were reported by the laboratory and the data validator used professional judgment to select the best result for reporting purposes.

Semivolatile Organic Compounds (SVOCs)

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project

samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time, without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria with the following exceptions.

Inst.	Date/ Time	Target Analyte(s)	%RSD	RRF	Corrective Action	Affected Sample(s)
S3	11/6/12 15:11	2,4-Dimethylphenol 4-Chlorophenyl-phenylether Fluorene	29.0 20.9 21.4	0.34 0.91 1.6	Action #1 Action #1 Action #1	All Samples

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria, with the following exceptions:

Inst.	Date/ Time	Target Analyte(s)	%D	RRF	Corrective Action	Affected Sample(s)
S3	11/14/12 10:01	Indeno(1,2,3-cd)pyrene Dibenzo(a,h)anthracene Benzo(g,h,i)perylene	22.9 25.0 25.1	0.97 0.99 1.02	Action #1 Action #1 Action #1	All Samples

Action #1: Positive results are qualified "J", estimated and nondetected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in any blank.

Target compounds were not identified in associated blank samples at a concentration above the MDL for organic parameter analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
FIELD BLANK	Di-n-butylphthalate	7.2 ug/L	36 ug/L	All Samples

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Nitrobenzene-d5	S01	40-110
2-Fluorobiphenyl	S02	50-110
Terphenyl-d14	S03	50-135
Phenol-d5	S04	10-115
2-Fluorophenol	S05	20-110
2,4,6-Tribromophenol	S06	40-125

Project Sample ID	S01	S02	S03	S04	S05	S06	Positive Results	Non Detect (ND)
	%R	%R	%R	%R	%R	%R		
REC-B-W	69	76	**42**	17	28	84	J	UJ
MW-11	67	82	**49**	20	29	83	J	UJ

If the surrogate percent recovery is greater than the upper acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. If the surrogate percent recovery is less than the lower acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes are qualified "UJ", estimated detection limit. All SVOC target analytes in the identified project samples should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS and MS/MSD recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Internal Standards (IS)

The calculated response of each IS compound fell within the QA/QC criteria without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "J" qualifier, which indicates an estimated value because the result was between the RL and MDL, was carried forward.

Pesticides

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal the amount in any blank. Target compounds were not identified in associated blank samples at a concentration above the MDL without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Tetrachloro-m-xylene	S01	25-140
Decachlorobiphenyl	S02	30-135

Project Sample ID	S01-1	S01-2	S02-1	S02-2	Positive Results	Non Detect (ND)
	%R	%R	%R	%R		
BW-5	**183**	78	81	49	J	No Qual

If the surrogate percent recovery is above the higher acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. All pesticide target analytes in the identified project samples that were analyzed on the indicated column should be qualified as noted above.

Laboratory Control Sample (LCS) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

LCS and MS/MSD recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Target Compound Identification

Target compounds that were detected in the project samples were detected in both GC columns at comparable concentrations (within 25%) that ensures no interfering analytes are present, with the following exceptions.

Sample ID	Analyte	Column %D	Action
BW-5	gamma-BHC (Lindane)	660	Action #1

Action #1: The lower of the column concentrations is reported and the results are qualified as "J", estimated.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. No qualification of the data is recommended.

PCBs

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Gas Chromatography/Mass Spectrometry (GC/MS) Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal the amount in any blank. Target compounds were not identified in associated blank samples at a concentration above the MDL without exception. No qualification of the data is recommended.

System Monitoring/Surrogate Compound Recoveries

System monitoring/surrogate compound recoveries were within the laboratory specific criteria for the analysis of the project samples, with the following exceptions:

Surrogate		Criteria (%)
Tetrachloro-m-xylene	S01	34-137
Decachlorobiphenyl	S02	40-135

Project Sample ID	S01-1	S01-2	S02-1	S02-2	Positive Results	Non Detect (ND)
	%R	%R	%R	%R		
MW-10	74	74	**37**	41	J	UJ

If the surrogate percent recovery is above the higher acceptance limit, associated target analyte positive results are qualified "J", estimated and nondetected analytes should not be qualified. All PCB target analytes in the identified project samples that were analyzed on the indicated column should be qualified as noted above.

Laboratory Control Sample (LCS) and MS/MSD Recoveries

LCS and MS/MSD recoveries were within the method specific criteria without exception. No qualification of the data is recommended.

Target Compound Identification

Target compounds that were detected in the project samples were detected in both GC columns at comparable concentrations, ensuring no interfering analytes are present. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Metals

Preservation and Holding Time Compliance

Maximum allowable holding times for each parameter were measured from the time of sample collection to the time of sample preparation or analysis for each project sample. All project samples were found to be properly preserved or analyzed within the USEPA recommended maximum holding time without exception. No qualification of the data is recommended.

Initial Calibration Verification (ICV)

Initial calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Continuing Calibration Verification (CCV)

Continuing calibration checks for the instruments used in the analysis of project samples fell within the method specific criteria without exception. No qualification of the data is recommended.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 5 times (5X) the amount in the associated blank sample.

Target compounds were not identified in associated blank samples at a concentration above the MDL for metals analyses, with the following exceptions:

Blank	Target Analyte(s)	Conc.	Flag sample results with a "U" if ≤ this value	Affected Sample(s)
FIELD BLANK	Sodium	518 ug/L	2590 ug/L	All Samples
MB-69213	Potassium	124 ug/L	620 ug/L	All Samples

Note: Preparation Blank associated samples include all samples analyzed within the sample analytical batch.

Interference Check Sample Analysis

The interference check sample solution percent recoveries (%Rs) fell within the method required control limits without exception. No qualification of the data is recommended.

Laboratory Control Sample (LCS) Analysis

The LCS %Rs fell within the method required control limits without exception. No qualification of the data is recommended.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

The MS/MSD %Rs fell within the method required control limits (75-125%) without exception. No qualification of the data is recommended.

Laboratory Duplicate Analysis

The laboratory duplicate percent differences (%Ds) fell within the method required control limits without exception. No qualification of the data is recommended.

ICP Serial Dilution Analysis

The ICP Serial Dilution %Ds fell within the method required control limits without exception. No qualification of the data is recommended.

Compound Quantitation

Compound quantitation is performed to ensure that reported quantitation results are accurate. Compounds were quantitated correctly without exception.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit (RL) but above the method detection limit (MDL), and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with USEPA guidance. The "B" qualifier, which indicates an estimated value because the result was between the RL and MDL, was changed to a "J" qualifier by the data reviewer.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Soil Oxidant Demand Reports

Environmental Solutions

Klozur® Persulfate Demand Test

Client:	LaBella Associates, P.C. 300 State Street Rochester, NY 14614 Jen Gillen
Performing Lab:	FMC Corporation Tonawanda, NY
Date	April 15, 2013

I. Background

Klozur® activated persulfate is a strong oxidant capable of mineralizing a wide range of contaminants, including chlorinated solvents, petroleum hydrocarbons, polyaromatic hydrocarbons, gasoline additives, pesticides, and many others. Activation of the persulfate anion generates the sulfate radical, the primary species that drives the rapid destruction of the contaminants of concern. Activation can be accomplished by several methods[1]: heat, transition metals, addition of hydrogen peroxide, or utilizing high pH. Choice of the activation method will depend on the contaminant of concern and site characteristics.

A chemical oxidant is not specific as to what it will oxidize. As a result, activated persulfate will not only mineralize the contaminant of concern, but a portion of the oxidant will be used in oxidizing soil organics, reduced metals, and organic species that are not of concern. In addition, activated persulfate will undergo auto-decomposition, which will be a function of temperature, concentration and activation method. The demand upon the activated persulfate from all of these components is captured in a coarse screening test termed, "Klozur Demand Test". It is dependent upon the site characteristics, such as the organic content of the soil, the mineral loading, and soil type and collectively must be considered for estimating the magnitude of oxidant dosing during field application.

The Klozur® Persulfate KDT test measures the loss of persulfate in the presence of soil, groundwater and activator over a period of 48 and 96 hours. The resulting KDT values can then be used as a guide to develop appropriate persulfate dosing for subsequent treatability testing and field applications.

[1] FMC is the owner of licensee under various patents relating to the use of activation chemistries

II. Sample Handling for LaBella Associates, P.C.

Client Sample Identification

- Soil ID: SOD; GW ID: N/A; DiH_2O used

Handling Procedures

- The samples were received on 04/01/2013.
- During the collection of the preliminary data, the soil was well mixed, used and put into its original container after its use.
- No groundwater was sent to be used in this analysis; DiH_2O was used in its place.
- On 04/08/2013, multiple experimental samples were prepared according to the amounts shown in the results table below.
- The experimental samples were stored at room temperature and each sample was vigorously shaken once per day.
- About 2200 grams of the soil sample is left with us. The unused soil sample will be disposed of responsibly after about one week.

III. Results

Sample ID	Run #	Trial Activator	Soil Wt. (g)	Water Vol. (mL)	Klozur Dosage (g/Kg Soil) t=0 hrs.	Slurry pH	Klozur Consumption (g/Kg Soil) t=48hr	Klozur Consumption (g/Kg Soil) t=96 hr
SOD	1	NaOH	10	30	15	11.26-11.09	0.55	1.02
	2	NaOH	10	30	15	11.26-11.09	0.56	1.05
	Soil Buffering Demand = **0.71 gallons 25% NaOH/ 2000 lb of Soil** **Acid Generation Demand** = **0.13 gallons 25% NaOH/ lb of Klozur persulfate**							

IV. Conclusions

The Klozur® Persulfate demand with NaOH activation for the SOD soil sample ranges from approximately 0.55 – 1.05 g persulfate / kg soil, which is considered low to average as compared to persulfate SOD for most soils. Based on these values, an average of 0.80 g/kg is recommended as an area SOD for further refinement of the Klozur persulfate total demand.

Soil buffering capacity was determined using a basic pH titration method to ascertain how much base was needed to add to the system to maintain a pH of 11 during the KDT testing period. The amount of base is reported herein. However, pH buffering measurements in a jar system tend to overestimate the amount of base that would be needed to achieve equivalent results in the field. As a result the reported base demand should be treated as a conservative estimate, and may not be representative of actual field base demand.

V. Authorizing Signatures

This report contains the results as determined by FMC laboratory protocol and are accurately represented herein.

Eric Krueger
FMC Performing Scientist

Note: 1. FMC recommends performing suitable treatability testing and field pilot demonstration to determine the effectiveness of Klozur® activated persulfate on the contaminants of concern. KDT testing provides only an indication of the minimum amount of oxidant required to overcome the demands of soil, groundwater and other secondary species that contribute to the usage of the oxidant. The KDT results do not imply a guarantee of efficacy of the activated persulfate in actual field situations. 2. ANY SUCH QUANTITY OR WARRANTY IS EXPRESSLY DISCLAIMED.

Subject: RemOx® S ISCO Reagent Permanganate Natural Oxidant Demand

Summary
The overall average RemOx® S ISCO reagent permanganate natural oxidant demand (PNOD) at 48 hours for the soil sample was determined to be 3.01 g/kg. The demands ranged from 2.93 g/kg to 3.06 g/kg. These values are calculated on a weight as potassium permanganate ($KMnO_4$) per dry weight of soil.

Background
One soil sample was received from LaBella Associates, P.C. in Rochester, NY from the 690 St. Paul project on April 1st, 2013. The soil sample designation was 690 St. Paul PNOD. The sample was analyzed for permanganate natural oxidant demand. The measurement of the permanganate natural oxidant demand is used to estimate the concentration of permanganate that will be consumed by the natural reducing agents during a given time period of 48 hours.

Experimental
The samples were analyzed for permanganate natural oxidant demand following ASTM D7262-07 Test Method A. A brief summary is as follows:

To determine the PNOD, the soil was baked at 105°C for 24 hours then allowed to cool to room temperature. The soil was then blended and passed through a U.S. 10 sieve (2 mm). Reactors were loaded with 50 grams of soil and 100 mL of 20 g/L $KMnO_4$ for an initial dose of 40 g/kg $KMnO_4$ on a dry soil weight basis at a 1:2 soil to aqueous reagent ratio. Each soil dose was performed in triplicate. The reaction vessels were inverted once to mix the reagents. Residual permanganate (MnO_4^-) was determined at 48 hours. The demands were calculated on a dry weight basis.

Results
The permanganate demand is the amount of permanganate consumed in a given amount of time. It should be noted that in a soil or groundwater sample, the oxidation of any compound by permanganate is dependent on the initial dose of permanganate and the reaction time available. As the permanganate dose is increased, the reaction rate and oxidant consumption may also

increase. Some compounds that are not typically oxidized by permanganate under low doses can become reactive with permanganate at higher concentrations.
The 48-hour PNOD results can be seen in Table 1 (on a dry soil basis).

Table 1: 48-Hour PNOD *

Soil Sample Identification	Average and Standard Deviation (g/kg)	Replicate 1 (g/kg)	Replicate 2 (g/kg)	Replicate 3 (g/kg)
690 St. Paul PNOD	3.01 ± 0.069	3.03	3.06	2.93
Overall Average	3.01			

*Demands were calculated on a weight $KMnO_4$/dry soil weight basis from an initial dose of 40.0 g/kg $KMnO_4$ initial dose at a 1:2 soil to aqueous solution ratio

Conclusions
For this application the amount of permanganate needed will be dependent on the reaction time allowed. On average, the soil sample had a 48-hour permanganate demand value of 3.01 g/kg. The demands ranged from 2.93 g/kg to 3.06 g/kg. Generally, remediation sites with a soil demand of less than 20.0 g/kg at the time of interest are favorable for *in situ* chemical oxidation with permanganate (see Table 2 for additional information).

Table 2: Correlation of Permanganate Natural Oxidant Demand Results*

PNOD (g/kg)	**Rank**	Comment
<10	Low	ISCO with MnO_4^- is recommended. Soil contribution to MnO_4^- demand is low.
10-20	Moderate	ISCO with MnO_4^- is recommended. Soil contribution to MnO_4^- demand is moderate. Economics should be considered.
>20	High	ISCO with MnO_4^- is technically feasible. Other technologies may provide lower cost alternatives.
